Religiosity and spirituality (R/S) represent a very important factor of daily life for many individuals across different cultures and contexts. It is associated with lower rates of depression, suicide, mortality, and substance abuse, and is positively correlated with well-being and quality of life. Despite growing academic recognition and scientific literature on these connections this knowledge has not been translated into clinical practice. Part of the expanding Oxford Cultural Psychiatry series, *Spirituality and Mental Health Across Cultures* is a timely exploration of the implications of R/S on mental health. Written and edited by experts in the fields of spirituality and mental health from different cultural and geographical perspectives, this unique resource assesses how mental health relates to world religions, agnosticism, atheism, and spiritualism unaffiliated with organised religion, with a practical touch. Across 25 chapters, this resource provides readers with a succinct and trustworthy review of the latest research and how this can be applied to clinical care. The first section covers the principles and fundamental questions that relate science, history, philosophy, neuroscience, religion, and spirituality with mental health. The second section discusses the main beliefs and practices related to world religions and their implications to mental health. The third reviews the impact of R/S on specific clinical situations and offers practical guidance on how to handle these appropriately, such as practical suggestions for assessing and integrating R/S in personal history anamnesis or psychotherapy.

This comprehensive volume investigates the dynamics of mobilization and demobilization of social networks before, during, and after episodes of political turbulence in the Middle East region, focusing particularly on the 2011 Arab uprisings. The authors consider important questions regarding agency, strategic action, and institutional outcomes that have significance for social mobilization, social movements, and authoritarian governance. This collection proposes an interactive perspective linking up contentious politics with routine governance through a dynamic articulation of repertoires of contention. The authors use a micro-mobilization perspective to frame the different trajectories of protest networks in times of uncertainty. They place the interactions between grassroots activists, structured organizations, and state actors at the centre of the explanation of change and stability in the recent mobilizations of the region. By starting with descriptions of interactions at the grassroots level, the authors then explain macro level dynamics between networks and other players, including the state. This book was originally published as a special issue of the journal *Social Movement Studies*.

*Impacted Teeth* Mitchell Beazley

An account of film theory aimed at the cinemagoer and the student. It ranges from the late 1960s to the present, a period in which a number of conceptual strands were woven together. The authors chart the construction of this synthesis and its subsequent fragmentation, and elucidate the various intellectual currents contributing to it. The authors trace the shift from Althusserian Marxism to Lacanian psychoanalysis as the dominant paradigms for discussing aesthetic questions.--From book jacket.

This book describes collisions between atoms that have been cooled to extremely low temperatures by optical and evaporative cooling techniques. The author reviews the elements of the quantum theory of scattering, and summarizes the theory and experimental techniques of optical cooling and trapping. Later chapters describe applications to precision spectroscopy, the determination of atomic properties, control of inelastic collisions by laser fields, and the manipulation of Bose-Einstein condensates (mesoscopic quantum systems). Finally, it reviews the essential properties of these mesoscopic quantum systems and describes the key importance of the scattering length to condensate stability. Descriptions of experiments and theory are included.

The problem of media representations about mental health is now a global issue with health agencies expressing concern about produced stigma and its outcomes, specifically social exclusion. In many countries, the statistic of one in four people experiencing a mental health condition prevails, making it essential that more is known about how to improve media portrayals. With a globally projected increase in mental health conditions *Mediating Mental Health* offers a detailed critical analysis of media representations in two phases looking closely at genre form. The book looks across fictional and factual genres in film, television and radio examining media constructions of mental health identity. It also questions the opinions of journalists, mental healthcare professionals and people with conditions with regard to mediated mental health meanings. Finally, as a result of a production project, people with conditions develop new images making critical contrasts with dominant media portrayals. Thus, useful and practical recommendations for developing media practice ensue. As such, this book will appeal to mental health professionals, people with conditions, journalists, sociologists,

students and scholars of media and cultural studies, practitioners in applied theatre, and anyone interested in media representations of social groups.
