Niet weg te leggen! Thompsons tweede boek is nog beter dan zijn eerste, een must voor fans van Arnaldur Indriason, Stieg Larsson, Henning Mankell en Jo Nesb. Booklist (starred review) Inspecteur Kari Vaara krijgt de gevoelige opdracht om onderzoek te doen naar Arvid Lahtinen, een negentigjarige Finse nationale held die ervan verdacht wordt oorlogsmisdaden gepleegd te hebben tijdens de Tweede Wereldoorlog. Hij is de enige overlevende van de onlangs ontdekte Stalag 309- eenheid, die mogelijk communisten en Joden zou hebben geliquideerd in samenwerking met de Gestapo. Tegelijkertijd raakt Vaara betrokken bij de moordzaak van Lisa Filippov, de promiscue vrouw van een Russische zakenman. Het heeft er alle schijn van dat haar minnaar de moord in de schoenen geschoven krijgt, terwijl Filippov zelf duidelijk een hand boven het hoofd gehouden wordt. Het spoor van die hand leidt Vaara naar de corrupte top van de macht. Al snel komen heden en verleden met elkaar in botsing op een manier die niemand voor mogelijk had gehouden...

Accident reconstruction utilizes principles of physics and empirical data to analyze the physical, electronic, video, audio, and testimonial evidence from a crash, to determine how and

why the crash occurred, how the crash could have been avoided, or to determine whose description of the crash is most accurate. This process draws together aspects of mathematics, physics, engineering, materials science, human factors, and psychology, and combines analytical models with empirical test data. Different types of crashes produce different types of evidence and call for different analysis methods. Still, the basic philosophical approach of the reconstructionist is the same from crash type to crash type, as are the physical principles that are brought to bear on the analysis. This book covers a basic approach to accident reconstruction, including the underlying physical principles that are used, then details how this approach and the principles are applied when reconstructing motorcycle crashes. This second edition of Motorcycle Accident Reconstruction presents a thorough, systematic, and scientific overview of the available methods for reconstructing motorcycle crashes. This new edition contains: Additional theoretical models, examples, case studies, and test data. An updated bibliography incorporating the newest studies in the field. Expanded coverage of the braking capabilities of motorcyclists. Updated, refined, and expanded discussion of the decelerations of motorcycles sliding on the ground. A thoroughly rewritten and expanded discussion of motorcycle impacts with passenger vehicles. Updated coefficients of restitution for collisions between motorcycles and cars. A new and expanded discussion of using passenger car EDR data in motorcycle accident reconstruction. A new section covering recently published research on post-collision frozen speedometer readings on motorcycles. A new section on motorcycle interactions with potholes, roadway deterioration, and debris and expanded coverage of motorcycle falls. This second edition of Motorcycle Accident Reconstruction is a must-have title for accident reconstructionists, forensic engineers, and all interested in understanding why and how motorcycle crashes occur.

Franklin, Jack, Marla, Thadius, and Caitlin... this unlikely group of assorted misfits are the Cemeterians, a group that will take on any job - no, really, we mean any bloody job (money's a bit tight right now)! Trudge through disgusting sewers to battle manatee-massacring mermaids and soggy cultists, creep through creepy, fog-littered cemeteries straight out of an ancient Hammer Film soundstage, confront undead lecherous lodgers and other assorted beasties, creepies, and ghoulies. It all comes down to whether an adolescent giant Automaton, a truly mad, Mad Scientist, a surly Necromancer, a Banshee's granddaughter, and a reluctant furry monster straight from under your little sister's bed can manage not to kill each other - or, at least, quit fighting over the tele-privilege-schedule long enough to get the job done! Not likely.
