SAP HANA Advanced Data Modeling
Independently Published

This book provides various insights on the overall HANA modeling process, which essentially involves the activities such as requirement analysis for the KPIs, solution design, creating information models (views), implementing SQL Script based solutions, performance optimization of the

models, testing and validations. It will help the learners, in understanding the practical application of various SAP HANA modeling concepts to achieve complex reporting requirements. The contents of this book includes various building blocks of HANA modeling solutions: Key features and use cases of SAP HANA platform to address various requirements related to analytics Project planning approaches such as requirement analysis, implementation methodology and solution design aspects related to native HANA Implementing

Calculation views for different reporting requirements - Modeling Concepts and practical examples SQL Script programming concepts and applications Data validation and debugging techniques related to HANA models Best practices for modeling HANA views, managing the changes and transports Performance analysis tools and optimization methods for HANA models Case studies and solution approaches using graphical modeling and SQL script
