wavelet transforms include: Speech and audio processing Wavelet Transforms in MATLAB - MATLAB & Simulink The continuous wavelet transform (CWT) is a time-frequency transform, which is ideal for analyzing nonstationary signals. A signal being nonstationary means that its frequency-domain representation changes over time. Many signals are nonstationary, such as electrocardiograms, audio signals, earthquake data, and climate data. Time-Frequency Analysis and Continuous Wavelet Transform ... View MATLAB Command. The empirical wavelet transform (EWT) is a technique that creates a multiresolution analysis (MRA) of a signal using an adaptive wavelet subdivision scheme. The EWT starts with a segmentation of the signal's spectrum. The EWT provides perfect reconstruction of the input signal. The EWT coefficients partition the energy of the input signal into separate passbands.
