Academic geriatricians are always looking for an improved objective, quantifiable measure of biological ageing in humans to replace that unphysiological and arbitrary scale 'years survived'. The MCQ may be the nearest we have come yet to achieving this Holy Grail. An individual's facility with the setting and answering of MCQs separates the medical generations more surely than years. I am only grateful I was educated in a less rigorous but perhaps more 'gentlemanly' era. If one appeared before an examiner neatly dressed with clean finger nails and the examination scripts were literate essays written in fountain pen then you were in - or so it seemed. For the past 20 years we have been evolving towards much more objective and rigorous assessment of knowledge and understanding of medicine of both undergraduate and postgraduate students. This process has been exemplified by the evolution of what is now the seemingly ubiquitous MCQ. When initially presented as objective and quantifiable measures of clinical knowledge MCQs were the subject of scorn - how could they assess the art of medicine - the grey areas of clinical decision making? However they very rapidly overcame this antediluvian scepticism and I believe they have had an effect well beyond the limited area of competence measurement. They have induced or at the very least contributed to a shift towards a more rigorous, dare one say more scientific, approach to clinical medicine.

*Essential Revision Notes in Paediatrics for the MRCPCH* Lippincott Williams & Wilkins

This book offers mental health guidelines for all medical professionals facing the emerging challenges presented by an aging population worldwide. The text acknowledges that as the geriatric demographic grows, limited resources and infrastructures demand quality protocols to deliver inpatient geriatric psychiatric care, and that many physicians may not be trained to address these specific needs. This text fills this gap with guidelines assessing, diagnosing, and treating aging

patients as they present in the emergency room and other settings. Unlike any other text, this book focuses on how to optimize the use of the inpatient setting by recommending evaluations and treatments, and offering flow-charts and figures of key points, to guide both general workup and continued evaluation and treatment. This approach aims to minimize instances of premature release or readmissions and to improve outcomes. Chapters cover the various issues that clinicians face when working with an older patient, including legal topics, limitations to treatment, prescription-related complications, patients struggling with substance abuse, and various behavioral concerns. Written by experts in the field, the text takes a multidisciplinary approach to deliver high-quality care as needs of the aging population evolve. Inpatient Geriatric Psychiatry is a vital resource for all clinicians working with an aging population, including geriatricians, psychiatrists, neurologists, primary care providers, hospitalists, psychologists, neuropsychologists, emergency room and geriatric nurses, social workers, and trainees.
