Hijacking the Brain provides the first-ever scientific explanation for the success of Twelve-Step programs. Hijacking the Brain examines data provided by recent rapid growth in the fields of neuroscience, neuroimaging, psychology, sociobiology and interpersonal neurobiology that have given us new, dramatic insights into the neural and hormonal correlates of stress and addiction, cognitive decline with addiction, as well as for the relative success of Twelve-Step Programs of recovery. Addiction is recognized by experts as an organic brain disease, and most experts promote Twelve-Step programs (AA, NA, CA, etc.) which invoke a 'spiritual solution' for recovery. To date, no one has described why these programs work. 'Hijack' tells us why. In 'Hijack,' the role of 'working The Steps' for reducing stress and becoming emotionally centered is discussed in depth. A full chapter is devoted to the rewarding and comforting physiology of meditation and the spiritual experience. The author uses examples from animal sociobiology, as well as sophisticated human brain-imaging studies, to demonstrate that empathic socialization and altruism are instinctive and 'naturally rewarding' and, along with Step Work, act as a substitute for the 'synthetic rewards' of drugs of abuse. 'Hijack' does not challenge the Steps or the Traditions of Twelve-Step programs. The sole intention of Hijacking the Brain is to 'connect the dots' between an 'organic brain disease' and a 'spiritual solution' with sound physical, scientific evidence. Avoiding strict scientific language as much as possible, 'Hijack' is written for the layperson and abundantly illustrated.

The American Society of Addiction Medicine Patient Placement Criteria 2R (ASAM PPC-2R) is the most widely used and comprehensive set of guidelines for placement, continued stay and discharge of patients with addiction disorders. The ASAM PPC-2R is officially required in over 30 states and provides the addiction field with the nomenclature for describing the continuum of addiction services. The language is consistent with the American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders (DSM-IV). The second revised edition has been updated to better meet the needs of patients with co-occurring mental and substance-related disorders ("dual diagnosis"). The ASAM Patient Placement Criteria 2R gives medical professionals seeking assistance in providing timely, appropriate, and effective care a holistic and multidimensional approach that matches patient needs to specific treatment services.

This book is the culmination of five years of debate among distinguished scholars in law, public policy, medicine, and biopsychology, about the most difficult questions in drug policy and the study of addictions. Do drug addicts have an illness, or is the addiction under their control? Should they be treated as patients or as criminals? Challenging the conventional wisdom, the authors show that these standard dichotomies are false.

Alcohol use disorder (AUD) is a major public health problem in the United States. The estimated 12-month and lifetime prevalence values for AUD are 13.9% and 29.1%, respectively, with approximately half of individuals with lifetime AUD having a severe disorder. AUD and its sequelae also account for significant excess mortality and cost the United States more than \$200 billion annually. Despite its high prevalence and numerous negative consequences, AUD remains undertreated. In fact, fewer than 1 in 10 individuals in the United States with a 12-month diagnosis of AUD receive any treatment. Nevertheless, effective and evidence-based interventions are available, and treatment is associated with reductions in the risk of relapse and AUD-associated mortality. The American Psychiatric Association Practice Guideline for the Pharmacological Treatment of Patients With Alcohol Use Disorder seeks to reduce these substantial psychosocial and public health consequences of AUD for millions of affected individuals. The guideline focuses specifically on evidence-based pharmacological treatments for AUD in outpatient settings and includes additional information on assessment and treatment planning, which are an integral part of using pharmacotherapy to treat AUD. In addition to reviewing the available evidence on the use of AUD pharmacotherapy, the guideline offers clear, concise, and actionable recommendation statements, each of which is given a rating that reflects the level of confidence that potential benefits of an intervention outweigh potential harms. The guideline provides guidance on implementing these recommendations into clinical practice, with the goal of improving quality of care and treatment outcomes of AUD.

Almost 40 percent of people living in the United States have an addiction to alcohol, drugs, or some form of tobacco. These addictions cost Americans hundreds of billions of dollars every year. Clearly, addiction is an enormous problem. *Addiction in America: Society, Psychology, and Heredity* takes a look at what leads people to a life of addiction—the social, psychological, and hereditary factors that might make an individual susceptible to

addiction. This book provides you with an overview of one of the most serious problems facing American society today.

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

"If anyone you know is struggling with addiction—or if you think you might have a problem—you want to read this book."—GARTH STEIN, bestselling author of *The Art of Racing in the Rain* "a proven, comprehensive program that compassionately guides the reader to a place of resolution"—DAVID PERLMUTTER, MD, #1 New York Times bestselling author of *Grain Brain*, and *Brain Maker* "a massive achievement and a giant step forward for addiction medicine"—ANNIE GRACE, author of *This Naked Mind* Drug overdose is now the leading cause of death for Americans under fifty. Even as opiate addiction skyrockets, more people than ever before are hooked on alcohol, sedatives, cigarettes, and even screens. The face and prevalence of addiction has changed and evolved, but our solutions to addiction are stuck in the past. We've been treating addiction as a black or white issue, a disease you either suffer from or will never suffer from. The problem with this model is that it doesn't account for the incredible forces working against all of us, pushing all of us toward addiction: stress, undernourishment, sleep-deprivation, vitamin D deficiency, and isolation, not to mention a flawed medical system and corrupt pharmaceutical companies doling out prescriptions at every turn. The truth: Addiction is a disease that, like many others, exists on a spectrum. We are more vulnerable to becoming addicted to substances at certain points in our lives and based on the evidence provided in *The Addiction Spectrum*, most effective at kicking addiction when we take a holistic approach. With the help of the 13-point plan and individual protocols detailed in this book, you have the power to change your destiny. No one understands this more than Dr. Paul Thomas, who recovered from alcohol addiction early in his career and founded one of the most effective rehabilitation centers for teens and young adults in his hometown of Portland, OR. Named one of the top family doctors and one of the top pediatricians in the country, Dr. Paul is also board-certified in both integrative medicine and addiction medicine. This unique combination of specialties is intentional: Dr. Paul has devoted his entire life and career to saving lives. Using the best conventional medicine alongside the new science of alternative health, Dr. Paul has treated thousands of patients with the life-saving solutions provided in *The Addiction Spectrum*. Addiction is a compendium of often devastating circumstances that have gone unchecked by society for far too long. This book is a positive light and guide to overcoming not only addiction but the challenges and obstacles that affect us all.

### Drugs in American Society Lippincott Williams & Wilkins

Problems stemming from the misuse and abuse of alcohol and other drugs are by no means a new phenomenon, although the face of the issues has changed in recent years. National trends indicate substantial increases in the abuse of prescription medications. These increases are particularly prominent within the military, a population that also continues to experience long-standing issues with alcohol abuse. The problem of substance abuse within the military has come under new scrutiny in the context of the two concurrent wars in which the United States has been engaged during the past decade—in Afghanistan (Operation Enduring Freedom) and Iraq (Operation Iraqi Freedom and Operation New Dawn). Increasing rates of alcohol and other drug misuse adversely affect military readiness, family readiness, and safety, thereby posing a significant public health problem for the Department of Defense (DoD). To better understand this problem, DoD requested that the Institute of Medicine (IOM) assess the adequacy of

current protocols in place across DoD and the different branches of the military pertaining to the prevention, screening, diagnosis, and treatment of substance use disorders (SUDs). Substance Use Disorders in the U.S. Armed Forces reviews the IOM's task of assessing access to SUD care for service members, members of the National Guard and Reserves, and military dependents, as well as the education and credentialing of SUD care providers, and offers specific recommendations to DoD on where and how improvements in these areas could be made.

Every day, nearly 275 people are dying from opioid addiction in America. This doctor wants to stop the crisis. "I can't retire. Not until the Opioid Epidemic finally becomes a chapter in our country's history." Over the past two decades, the opioid addiction has resulted in the deaths of nearly one million people in our country. Screening and brief intervention for addictions will mean fewer people dying from illegal overdose and ensure that patients get prescription-grade pain pills or buprenorphine from the pharmacy, but doctors are not taught this in American medical schools. In 2006, after years of feeling powerless to help those addicted to opioids, benzodiazepines, and stimulants, general practitioner Dr. Arun Gupta joined the

American Society of Addiction Medicine and earned his certification to treat patients with addictions. Now, in his eye-opening new book, after decades of research and first-hand experience, he tells us how to end this crisis that is destroying so many lives. Here are some hard facts: • The CDC classifies Opioid Use Disorder (OUD) and overdoses as "preventable," and yet nearly 275 are dying every day. • SAMHSA says 41.1 million people needed Substance Use Disorder (SUD) treatment in the past year, but only 6.5% received it. There are not enough addiction doctors to care for them. • Doctors are trying to comply with the literally thousands of regulations that have been thrown at them, or they face serious punitive consequences. • Respecting an addict's basic human dignity means they must have access to treatment. If they do not, we confirm their lives are not worth saving. The medical profession is trusted to save lives. Passionate, factual, and written with truth as the only agenda, this book offers the practical solutions for the War on Drugs that American so desperately needs.
