All trainee teachers in England and Wales have to sit numeracy and literacy skills tests in order to achieve Qualified Teacher Status (QTS) which permits them to continue or start teaching. *How to Pass the QTS Numeracy and Literacy Skills Test* is the only book available that includes both literacy and numeracy revision and mock tests. The numeracy section starts at a low level and includes a diagnostic test, a maths review, mental and general arithmetic practice, and revision of statistics. It gives the reader a good grounding in the skills needed to pass the test, particularly if maths has always been a weak subject. The literacy section includes practice material on spelling, punctuation, grammar and comprehension. It highlights the areas where people commonly have problems, and provides easy to follow explanations and practice questions and answers. This book comes with FREE audio files for mental arithmetic tests. To download them please visit:

An academy is a new type of school that is publicly funded, supported by one or more sponsors and operates independently of the local authority. Their aim is to raise achievement standards in deprived areas by replacing poorly performing schools or by providing new school places where they are needed. 83 academies were in operation by September 2007, with plans for 200 academies to be opened by 2010 at a capital cost of around £5 billion. Following on from a NAO report on this topic (HCP 254, session 2006-07; ISBN 9780102944426) published in February 2007, the Committee's report examines the progress of the Academies Programme and whether it is on track to achieve its objectives. Findings include: i) the average capital cost of the first new-build academies was £27 million, compared with between £20-22 million for other new secondary schools; ii) exclusions of pupils are higher on average from academies than other schools; and iii) although there are signs of progress being made, such as improvements at GCSE and key stage 3 levels, achievements in literacy and numeracy levels are lower than other secondary schools and it is too early to tell whether rising attainment is sustainable. Academies need to collaborate more with other secondary schools and lessons need to be learned from completed academy projects in terms of improving project management and reducing cost overruns.

Improving Learning by Widening Participation in Higher Education presents a strong and coherent rationale for improving learning for diverse students from a range of socio-economic, ethnic/racial and gender backgrounds within higher education, and for adults across the life course. Edited by Miriam David, the Associate Director of the ESRC's highly successful Teaching and Learning Research Programme, with contributions from the seven projects on Widening Participation in Higher Education (viz Gill Crozier and Diane Reay; Chris Hockings; Alison Fuller and Sue Heath; Anna Vignoles; Geoff Hayward and Hubert Ertl; Julian Williams and Pauline Davis; Gareth Parry and Ann-Marie Bathmaker), this book provides clear and comprehensive research evidence on the policies, processes, pedagogies and practices of widening or increasing participation in higher education. This evidence is situated within the contexts of changing individual and institutional circumstances across the life course, and wider international transformations of higher education in relation to the global knowledge economy. Improving Learning by Widening Participation in Higher Education also considers: the changing UK policy contexts of post-compulsory education; how socio-economically disadvantaged students – raced and gendered – fare through schools and into post-compulsory education; the kinds of academic and vocational courses, including Maths, undertaken; the changing forms of institutional and pedagogic practices within higher education; how adults view the role of higher education in their lives. This book, based upon both qualitative studies and quantitative datasets, offers a rare insight into the overall implications for current and future policy and will provide a springboard for further research and debate. It will appeal both to policy-makers and practitioners, as well as students within higher education.

This book will supplement the training currently being offered to all secondary English departments. It offers a view of the place of the English 'strand' in the overall Key Stage 3 strategy and gives support to English departments in their preparations for a new way of working. It will encourage English teachers to review their current schemes of work, offering suggestions for more substantial teaching and learning modules, as well as practical ideas for classroom use and recommended resources. The book interprets and explains the NLS document for busy practitioners; reinforces the messages of the National Literacy Strategy (NLS); spells out the expectations of the framework and offer guidance on how to fulfil them; and describes and explains the types of teaching methods to

improve students' learning. This book includes many practical ideas for classroom activities and offers direct support for the less confident English teacher. The book is equally valuable to students and practicing teachers.
