## MANNING AUGUST

*Technical Report* Springer Nature  
 Multimedia products have experienced tremendous market success. Yet too often they are given inadequate protection under existing national and international copyright schemes. Irini Stamatoudi provides a comprehensive, comparative treatment of multimedia works and copyright protection in this clear and concise volume. A detailed introduction outlines the nature of the multimedia work, as well as the scope of existing legislation; separate chapters consider collections and compilations, databases, audiovisual works and computer programs (video games are here treated as a 'test case'). Stamatoudi then analyses issues of qualification, regime of protection, and offers a model for a European legislative solution. Copyright and Multimedia Products will interest academics and students, as well as practitioners and copyright policy makers.  
 Columbia University Press  
 Based on the popular Artech House classic, *Digital Communication Systems Engineering with Software-Defined Radio*, this book provides a practical approach to quickly learning the software-defined radio (SDR) concepts needed for work in the field. This up-to-date volume guides readers on how to quickly prototype wireless designs using SDR for real-world testing and experimentation. This book explores advanced wireless communication techniques such as OFDM, LTE, WLA, and hardware targeting. Readers will gain an understanding of the core concepts behind wireless hardware, such as the radio frequency front-end, analog-to-digital and digital-to-analog converters, as well as various processing technologies. Moreover, this volume includes chapters on timing estimation, matched filtering, frame synchronization message decoding, and source coding. The orthogonal frequency division multiplexing is explained and details about HDL code generation and deployment are provided. The book concludes with coverage of the WLAN toolbox with OFDM beacon reception and the LTE toolbox with downlink reception. Multiple case studies are provided throughout the book. Both MATLAB and Simulink source code are included to assist readers with their projects in the field.

 Unrivaled in its scope and depth, *The Columbia History of Twentieth-Century French Thought* assesses the intellectual figures, movements, and publications that helped shape and define fields as diverse as history and historiography, psychoanalysis, film, literary theory, cognitive and life sciences, literary criticism, philosophy, and economics. More than two hundred entries by leading intellectuals discuss developments in French thought on such subjects as pacifism, fashion, gastronomy, technology, and urbanism. Contributors include prominent French thinkers, many of whom have played an integral role in the development of French thought, and American, British, and Canadian scholars who have been vital in the dissemination of French ideas.  
**Canadian Technical Report of Fisheries and Aquatic Sciences** Springer  
 This bibliography is a compilation of references published between 1963 and 1979 (inclusive) covering the following aspects of reproduction in the Family Salmonidae: ovarian and testicular development, ovulation and spermiation, reproductive behavior, fecundity, spawning and fertilization. Three subfamilies are included in Salmonidae: the Salmonae (salmon, trout, char), the Coregoninae (whitefishes) and the Thymallinae (graylings). Species/life stage, subject and author indexes are provided at the end of the bibliography to assist users in obtaining information on a given species or topic.  
**Statistical Brief** West Vancouver, B.C. : Government of Canada, Fisheries and Oceans  
 Most vols. include Proceedings of the Special Libraries

Association.  
*ASD Technical Report* Fisheries and Marine Service  
 This book asks what kind of impacts innovations and technology have on subjective well-being and happiness. It presents the state of the art both in terms of results and theoretical questioning on these topics. It proposes a new concept: innovation that leads to greater happiness, and highlights new research in this area. In so doing, it addresses a less researched area in the field of well-being research. The authors state that notwithstanding the indisputable positive contributions of innovation and technology, there are also drawbacks, which need equal attention in research. This book is of interest to students and researchers of quality of life and well-being, as well as innovation research.  
**Speculation Concerning Fish Populations in the Water of the Hudson Bay System** Artech House  
 This volume presents a collection of peer-reviewed, scientific articles from the 15th International Conference on Information Technology - New Generations, held at Las Vegas. The collection addresses critical areas of Machine Learning, Networking and Wireless Communications, Cybersecurity, Data Mining, Software Engineering, High Performance Computing Architectures, Computer Vision, Health, Bioinformatics, and Education.  
**A Comparative Analysis** Marquis Who's Who  
 This edition of this handbook updates and expands its review of the research, theory, issues and methodology that constitute the field of educational communications and technology. Organized into seven sectors, it profiles and integrates the following elements of this rapidly changing field.  
*Ski Area Management* Cambridge University Press
