Ten years have passed since the fall of Communism. B., a writer of great repute -whose birth and survival in Auschwitz defied all probability -has taken his own life. His friend Kingbitter discovers among his papers a play entitled Liquidation, in which he reads an erie foretelling of the personal and political crises that he and B.'s other friends now face. Having survived the Holocaust and the years of Communist rule, having experienced the surge of hope that rose up from the rubble of the Wall, they are left with little other than a sense of chaos and an utter loss of identity. Kingbitter's find precipitates a frantic search for the novel that B. may or may not have left behind. That B. was having an affair with Sarah, one of Kingbitter's companions, while Kingbitter himself was having an affair with B.'s ex-wife Judit, serves only to complicate matters further. An intricately layered

story of history and humanity -powerful, disturbing, lyrical, achingly suspenseful and brilliantly told.

The book is mostly devoted to the study of the prime factors of integers, their size and their quantity, to good bounds on the number of integers with different properties (for example, those with only large prime factors) and to the distribution of divisors of integers in a given interval. In particular, various estimates concerning smooth numbers are developed. A large emphasis is put on the study of additive and multiplicative functions as well as various arithmetic functions such as the partition function. More specific topics include the Erdős-Kac Theorem, cyclotomic polynomials, combinat.

COMPLETE ROUTINES! A MUST HAVE

FOR ALL VENTRILOQUISTS! A

COMPREHENSIVE BOOK ON

VENTRILOQUIST DIALOGUES COVERING

A MASSIVE VARIETY OF TOPICS! This

book was first published in 1984 - the

jokes are over 30 years old! Some

humour never dies! However you need

to bear in mind that some of the jokes are dated and corny. Even if you are just searching for additional gags to use in your present routine, this book is jam packed full of a variety of topics. The dialogues have been written in such a way that they will suit various vent dolls and personalities. Also realise that when a comedian buys a joke book, he may only find one or two jokes that suit his/her personality. This book should be treated in the same way. If you find all the routines useable; lucky you! However, even if you just get one useable gag that enhances a current routine, this alone is worth gold! A massive number of topics are covered! You will find something for all tastes and occasions, including: General, On Stage, Hobbies, More School, Famous, Sport, Family, General Cheekiness, Sick, Airplanes, School Again, The Problem, Marriage, Interview, Holidays, Mr. Entertainment, The Alphabet, Mother's-In-Law, My Dog, Television, More Sport, More General Cheekiness, More School Again, Opera, More Family, General Again, Overseas, Even More School Again, My Other Dog, General Knowledge, Jobs, Who's Being Clever Now? Michael Breggar, the award-winning author of "Auto-Magic" (seen monthly in The Linking Ring) is back with another collection of amazing, fun and well-constructed magical pieces. As in his previous best-selling book the "Five Roads to Vegas," some the effects have been previously published, but they have been further refined with more detailed explanations and performance notes. True to the "Auto-Magic" mantra, the routines in this book are professional and practical yet none require sleight of hand. As Michael always stresses, since the performance is the effect, the tricks need to be clever, layered, deceptive and, most of all, entertaining. Michael helps you navigate through each routine with careful descriptions and well-honed patter. However, you can easily adapt each effect to your own style. Contents: Back To The Launching Pad - Michael's addition the "Out of this World" landscape, with a big difference...it's done with the cards face up! Already a favorite of several working pros. ACAAN Opener - An old principle on top of an old U. F. Grant card trick turns it into a funny, yet still amazing Any Card at An Number effect. A Whole Empty Brain - Yet another old card principle that has been redressed and relayered to surprise even the knowledgeable. Two spectators show they are in mental sync by a very fair selection of cards from a shuffled deck. Not only are their cards mates, the rest of the deck suddenly turns blank! Not Just Another Book Test (A.K.A. "The Two-Fingered Book Test") - Michael received an amazing amount of emails on this effect. Finally, a book test that seems organic and makes contextual sense. Or were the emails more about the "AKA" part of the title??! The Dating Game - Playing around with yet another old

principle, Michael conjures up a fun effect where famous couples' names are listed on index cards. The cards are then torn in half and fully mixed, thus "separating" the couples. Using random throws of dice, the spectators magically reunite the couples. Usually!

Mixed Emojis - based on a Dan Harlan version of a Martin Gardner concept, a fabulous three-phase routine is demonstrated using domino-sized tiles depicting mobile phones with everyone's favorite excuse for not typing complete text messages!

Cra-Ker-Jack - Michael invents a ridiculously bizarre and funny new casino game, with rules that change on a whim. The spectators are treated to an amazing routine of card magic where their random decisions find the mates to four selected cards and ultimately produce the four aces.

The Price Is Write - From Michael's corporate repertoire, in figuring the "best price" for a silly-looking pen, the spectators write out all different prices on price tags. Through a very fair and random process of elimination, one tag is selected. The price on the tag exactly matches the amount of change in a small envelope, sitting on the table untouched from the beginning.

Drawn Conclusion - Michael's favorite trick and frequent closer. From a shuffled deck, a spectator selects a face down card. They place their fingers lightly on top in an effort to read the card through their fingertips. The magician then tries to read the reading and draws the image on a paper. Is it the correct card? Well, sorta.

Plus, two essays written in Michael's breezy style with more tips and presentational ideas than you can shake a stick at. If that's your idea of a good time.

If you have not read and learned the magic contained in this book you have no business calling yourself a close-up magician. The magic by John Scarne, Dai Vernon, Bert Allerton, S. Leo Horowitz, Emil Jarrow, Francis Carlyle, Dr. Jacob Daley, Tony Slydini, Ross Bertram, Nate Leipzig, and Max Malini helped shape the art of close-up magic as we know it. It has often been said that mastering the magic in this book will make you an accomplished close-up and sleight-of-hand artist. In many ways, it contains all the magic you need to build a professional caliber repertoire. Many have earned a living performing these routines and now you can too. Includes: 41 incredible routines by 11 incredible artists, a historical introduction and a bonus section with private correspondence related to the Stars Of Magic.

This volume contains a collection of research and survey papers written by some of the most eminent mathematicians in the international community and is dedicated to Helmut Maier, whose own research has been groundbreaking and deeply influential to the field. Specific emphasis is given to topics regarding exponential and trigonometric sums and their behavior in short intervals, anatomy of integers and cyclotomic polynomials, small gaps in sequences of sifted prime numbers, oscillation theorems for primes in arithmetic progressions, inequalities related to the distribution of primes in short intervals, the Möbius function, Euler's totient function, the Riemann zeta function and the Riemann Hypothesis. Graduate students, research mathematicians, as well as computer scientists and engineers who are interested in pure and interdisciplinary research, will find this volume a useful resource. Contributors to this volume: Bill Allombert, Levent Alpoge, Nadine Amersi, Yuri Bilu, Régis de la Bretèche, Christian Elsholtz, John B. Friedlander, Kevin Ford, Daniel A. Goldston, Steven M. Do formulas exist for the solution to algebraical equations in one variable of any degree like the formulas for quadratic equations? The main aim of this book is to give new geometrical proof of Abel's theorem, as proposed by Professor V.I. Arnold. The theorem states that for general algebraical equations of a degree higher than 4, there are no formulas representing roots of these equations in terms of coefficients with only arithmetic operations and radicals. A secondary, and more important aim of this book, is to acquaint the reader with two very important branches of modern mathematics: group theory and theory of functions of a complex variable. This book also has the added bonus of an extensive appendix devoted to the differential Galois theory, written by Professor A.G. Khovanskii. As this text has been written assuming no specialist prior knowledge and is composed of definitions, examples, problems and solutions, it is suitable for self-study or teaching students of mathematics, from

high school to graduate.

Fuzzy set theory provides us with a framework which is wider than that of classical set theory. Various mathematical structures, whose features emphasize the effects of ordered structure, can be developed on the theory. Fuzzy topology is one such branch, combining ordered structure with topological structure. This branch of mathematics, emerged from the background — processing fuzziness, and locale theory, proposed from the angle of pure mathematics by the great French mathematician Ehresmann, comprise the two most active aspects of topology on lattice, which affect each other. This book is the first monograph to systematically reflect the up-to-date state of fuzzy

topology. It emphasizes the so-called “pointed approach” and the effects of stratification structure appearing in fuzzy sets. The monograph can serve as a reference book for mathematicians, researchers, and graduate students working in this branch of mathematics. After an appropriate rearrangements of the chapters and sections, it can also be used as a text for undergraduates.
