How do we accommodate a growing urban population in a way that is sustainable, equitable, and inviting? This question is becoming increasingly urgent to answer as we face diminishing fossil-fuel resources and the effects of a changing climate while global cities continue to compete to be the most vibrant centers of culture, knowledge, and finance. Jan Gehl has been examining this question since the 1960s, when few urban designers or planners were thinking about designing cities for people. But given the unpredictable, complex and ephemeral nature of life in cities, how can we best design public infrastructure—vital to cities for getting from place to place, or staying in place—for human use? Studying city life and understanding the factors that

encourage or discourage use is the key to designing inviting public space. In *How to Study Public Life* Jan Gehl and Birgitte Svarre draw from their combined experience of over 50 years to provide a history of public-life study as well as methods and tools necessary to recapture city life as an important planning dimension. This type of systematic study began in earnest in the 1960s, when several researchers and journalists on different continents criticized urban planning for having forgotten life in the city. City life studies provide knowledge about human behavior in the built environment in an attempt to put it on an equal footing with knowledge about urban elements such as buildings and transport systems. Studies can be used as input in the decision-making process, as part of overall planning, or in designing individual projects such as streets, squares or parks. The original goal is still the goal today: to recapture city life as an important planning dimension. Anyone interested in improving city life will find inspiration, tools, and examples in this invaluable guide.

What is 'social capital'? The enormous positivity surrounding it conceals the instrumental economic rationality underpinning the notion as corporations silently sell consumer data for profit. Status chasing is just one aspect of a process of transforming qualitative aspects of social interactions into quantifiable metrics for easier processing, prediction, and behavioural shaping. A work of critical media studies, *Social Capital Online* examines the idea within the new 'network spectacle' of digital capitalism via the ideas of Marx, Veblen, Debord, Baudrillard and Deleuze. Explaining how such phenomena as online narcissism and aggression arise, Faucher offers a new theoretical understanding of how the spectacularisation of online activity perfectly aligns with the value system of neoliberalism and its data worship. Even so, at the centre of all, lie familiar ideas - alienation and accumulation - new conceptions of which he argues are vital for understanding today's digital society.

Although rarely explored in academic literature, most inhabitants and visitors interact with an urban landscape on a day-to-day basis is on the street level.

Storefronts, first floor apartments, and sidewalks are the most immediate and common experience of a city. These "plinths" are the ground floors that negotiate between inside and outside, the public and private spheres. *The City at Eye Level* qualitatively evaluates plinths by exploring specific examples from all over the world. Over twenty-five experts investigate the design, land use, and road and foot traffic in rigorously researched essays, case studies, and interviews. These pieces are supplemented by over two hundred beautiful color images and engage not only with issues in design, but also the concerns of urban communities. The editors have put together a comprehensive guide for anyone concerned with improving or building plinths, including planners, building owners, property and shop managers, designers, and architects.

Lively, exciting, amusing - this collection of ballads reveal the bawdy, anarchic sub-culture of England before the Industrial Revolution. Drawn from the eighteenth and early nineteenth centuries, it demonstrates the great wealth and variety of the English broadside ballads during these periods. At this time political balladry was rife and Irish ballads began to be composed in English - their distinctive background giving them a unique range of poetry. Indeed, these ballads represent an extensive, varied and important area of English literature. Written, as the editors observe, 'to provide a moment in which listeners could enjoy verse, wit and song', they very much reflect the lively observation, love of detail and social awareness of the age of the novel. This volume includes 127 ballads, ranging from 'Admiral Benbow' and 'The Jolly Bacchanal' to 'The Bottle the Best Companion' and 'The Young Man's Fortune'. Reprinted from contemporary or near-contemporary broadsides in the Madden Collection at the University Library, Cambridge, the head and tail blocks, a distinguished feature of the original texts, are also reproduced for this edition. The introduction is designed to enable individuals to read the texts in perspective and with pleasure. The book further includes a select bibliography and an index of ballad titles. This book was first published in 1975.
