The Handbook of Communication Skills is recognised as one of the core texts in the field of communication, offering a state-of-the-art overview of this rapidly evolving field of study. This

comprehensively revised and updated fourth edition arrives at a time when the realm of interpersonal communication has attracted immense attention. Recent research showing the potency of communication skills for success in many walks of life has stimulated considerable interest in this area, both from academic researchers, and from practitioners whose day-to-day work is so dependent on effective social skills.

Covering topics such as non-verbal behaviour, listening, negotiation and persuasion, the book situates communication in a range of different contexts, from interacting in groups to the counselling interview. Based on the core tenet that interpersonal communication can be conceptualised as a form of skilled activity, and including new chapters on cognitive behavioural therapy and coaching and mentoring, this new edition also places communication in context with advances in digital technology. The Handbook of Communication Skills represents the most significant single contribution to the literature in this domain. Providing a rich mine of information for the neophyte and practising professional, it is perfect for use in a variety of contexts,

from theoretical mainstream communication modules on degree programmes to vocational courses in health, business and education. With contributions from an internationally renowned range of scholars, this is the definitive text for students, researchers and professionals alike.

Interpersonal Communication in Pharmaceutical Care shows readers how

to communicate better with patrons and patients in hospital and retail pharmacy locations. Author Helen Meldrum, who has been teaching interpersonal skills to pharmacy students and practitioners since the early 1980s, uses actual scenarios to demonstrate basic communication skills. These “real life” examples illustrate communication problems from the perspectives of pharmacy workers and their subsequent efforts to improve the lines of communication with patrons. Yet the case studies do more than depict actual dialogue between pharmacists and their customers and patients; they address improved communication between co-workers, a vital aspect of providing excellent pharmacy practice. Throughout Interpersonal Communication in

Pharmaceutical Care, the reader finds how important it is to replace negative communication with more effective choices. These conversations prepare readers to act--not react--when faced with difficult persons or situations in pharmacy settings. Interpersonal Communication in Pharmaceutical Care is a resource of how to improve communication in pharmacy practice. Pharmacists who analyze the scenarios in this book can more readily identify effective responses to challenging situations in hospital and retail practice. The interpersonal skills section covers such fundamentals as: Basic speaking and listening skills Responsible assertive communication skills Counseling skills Interprofessional problem-solving skills Conflict management skills Collaborative

communication skills Truly a unique book due to its practical nature, Interpersonal Communication in Pharmaceutical Care is appropriate for all pharmacy practitioners from the level of technician through supervisor. Because the cases featured are transcripts of actual interactions between pharmacists, customers, and co-workers, readers can identify with the situations and begin to effectively change their communication methods with satisfactory results--for the patron or patient and the pharmacist. *A Practical Guide for Students and Practitioners* Communication Skills in Pharmacy Practice A Practical Guide for Students and Practitioners The Integrated Foundations of Pharmacy series is for those at the start of their
