A raccoon bite on the arm doesn't seem that serious, but it soon becomes a life-or-death medical crisis for Melissa Loomis. After days of treatment for recurring infection, it becomes obvious that her arm must be amputated. Dr. Ajay Seth, the son of immigrant parents from India and a local orthopaedic surgeon in private practice, performs his first-ever amputation procedure. In the months that follow, divine intervention, combined with Melissa's determination and Dr. Seth's disciplined commitment and dedication to his patients, brings about the opportunity for a medical breakthrough that will potentially transform the lives of amputees around the world. Rewired is the inspirational, miraculous story of Dr. Seth's revolutionary surgery that allows Melissa to not just move a prosthetic arm simply by thinking, but to actually feel with the prosthetic hand, just as she would with her natural arm. This resulted in what others have recognized as the world's most advanced amputee, all done from Dr. Seth's private practice in a community hospital, using a local staff, and with no special training or extensive research funding.

As the title of the book implies, this book is written from the technician workbench point of view. No theories and long stories, therefore what is in this book is what you will expect first hand when a microwave oven is brought to your workshop for repair. The author, Humphrey Kimathi has over 20 years experience in repair and service of home electrical appliances. Microwave oven which was invented in 1958 by accident has become an household name as many families have adopted this mode of warming food in seconds. An increase for the use of this technology has come with the need for personnel to service and maintain these gadgets. Unlike other home electrical appliances, microwave repair is the most dangerous, both to the user and service personnel. In this regard I have dedicated a full chapter on the safety around working on the microwave and also testing microwave leakage for the safety of the user before handing back the machine to the customer and also for the service technician-SAFETY FIRST!

Increasing numbers of parents grapple with children who are acting out without obvious reason. Revved up and irritable, many of these children are diagnosed with ADHD, bipolar illness, autism, or other disorders but don't respond well to treatment. They are then medicated, often with poor results and unwanted side effects. Based on emerging scientific research and extensive clinical experience, integrative child psychiatrist Dr. Victoria Dunckley has pioneered a four-week program to treat the frequent underlying cause, Electronic Screen Syndrome (ESS). Dr. Dunckley has found that everyday use of interactive screen devices — such as computers, video games, smartphones, and tablets — can easily overstimulate a child's nervous system, triggering a variety of stubborn symptoms. In contrast, she's discovered that a strict, extended electronic fast single-handedly improves mood, focus, sleep, and behavior, regardless of the child's diagnosis. It also reduces the need for medication and renders other treatments more effective. Offered now in this book, this simple intervention can produce a life-changing shift in brain function and help your child get back on track — all without cost or medication. While no one in today's connected world can completely shun electronic stimuli, Dr. Dunckley provides hope for parents who feel that their child has been misdiagnosed or inappropriately medicated, by presenting an alternative explanation for their child's difficulties and a concrete plan for treating them.
