The Manual of Tests and Criteria contains criteria, test methods and procedures to be used for classification of dangerous goods according to the provisions of Parts 2 and 3 of the United Nations Recommendations on the Transport of Dangerous Goods, Model Regulations, as well as of chemicals presenting physical hazards according to the Globally Harmonized System of Classification and Labelling of Chemicals (GHS). As a consequence, it supplements also national or international regulations which are derived from the United Nations Recommendations on the Transport of Dangerous Goods or the GHS. At its ninth session (7 December 2018), the Committee adopted a set of amendments to the sixth revised edition of the Manual as amended by Amendment 1. This seventh revised edition takes account of these amendments. In

addition, noting that the work to facilitate the use of the Manual in the context of the GHS had been completed, the Committee considered that the reference to the "Recommendations on the Transport of Dangerous Goods" in the title of the Manual was no longer appropriate, and decided that from now on, the Manual should be entitled "Manual of Tests and Criteria".

This book is about measuring electrical quantities -- voltage, current and resistance -- with meters. By making such measurements, we begin to understand the effects of electricity. Effects which, many times, we can neither see nor feel. Using Your Meter shows you how! It helps you understand how meters work, and how they can be used to make basic electrical measurements in the home, in the workshop, at the office, on the job. It has: easy to follow instructions, clearly illustrated examples, easy to read text, easy to understand applications. The basic concepts of meters, both analog and digital, circuit fundamentals, measurement techniques, and meter measurement examples are presented in six chapters. - Back cover.
