Building Alliances for a Sustainable Future

Routledge

In this book the authors explore the state of the art on efficiency measurement in health systems and international experts offer insights into the pitfalls and potential associated with various measurement techniques. The authors show that: -

The core idea of efficiency is easy to understand in principle - maximizing valued outputs relative to inputs, but is often difficult to make operational in real-life situations - There have been numerous advances in data collection and availability, as well as innovative methodological approaches that give valuable insights into how efficiently health care is delivered -

Our simple analytical framework can facilitate the development and interpretation of efficiency indicators.

Professor Gordon fathered this concept in this 1962 economic treatise. Although no investment model works for all stocks all of the time, the dividend discount model has proven to be a reliable way of selecting stocks that on average will perform relatively well on a long-term basis. It should be among the tools that investors use to select at least some of the stocks in their portfolio.

to an examination of its actual administration and regulation. Health Systems in Transition: Canada provides an objective description and analysis of the public, private, and mixed components that make up health care in Canada today. Published in co-operation with the World Health Organization Regional Office for Europe on behalf of the European Observatory

on Health Systems and Policies, Gregory P. Marchildon's study offers a statistical and visual description of the many facets of Canadian health care financing, administration, and service delivery. This study's most distinctive feature is a comparative description and analysis. For international comparison, five other countries have been selected: The United States, Australia, the

United Kingdom, France, and Sweden. Because public health care administration and delivery is highly decentralized in Canada, Marchildon also analyzes the important health status and health care features within Canada by province and territory, and describes in some detail the unique constitutional, jurisdictional, and financial features of the Canadian system. Balancing careful

assessment, summary, and illustration, Health Systems in Transition: Canada is a thorough and illuminating look at one of the nation's most complex institutions. *Actuarial Models for Disability Insurance* University of Toronto Press A comprehensive guide to the world of mergers and acquisitions Why do so many M&A transactions fail? And what drives the success of those deals

that are consummated ? Robert Bruner explains that M&A can be understood as a response by managers to forces of turbulence in their environment. Despite the material failure rates of mergers and acquisitions, those pulling the trigger on key strategic decisions can make them work if they spend great care and rigor in the development of their M&A deals. By addressing the key

factors of M&A success and failure, Applied Mergers and Acquisitions can help readers do this. Written by one of the foremost thinkers and educators in the field, this invaluable resource teaches readers the art and science of M&A valuation, deal negotiation, and bargaining, and provides a framework for considering tradeoffs in an effort to optimize the value of any

M&A deal. How to Make Measurement Matter for Policy and Management Prestel Pub Sustainable development has become a central perspective in environmental strategies around the world. It is clear that neither governments nor businesses have the capability to bring about sustainability on their own. Therefore, collaboration has emerged as a central concept. At the same time

it is obvious that someone has to take the lead in the development towards sustainability. This book focuses on different forms of collaboration emerging between various actors. The objective of the book is to more systematically explore the different roles and relationships between partnership and leadership. Basically, both partnership and leadership can be seen in a positive and

negative way: for example, as far as partnership is concerned, we can assume that the path towards sustainability can be paved by parties coming together, taking some initiative collaborating. On the opposite, partnership and consensus-based decisions can be seen as an obstacle to foster radical changes in production and consumption patterns. Similarly,

leadership can be seen as an obstacle to sustainable development if leaders form close circles and are not willing to share experiences with other actors; but leadership could also be considered as an important element to keep concepts and practices forward. The book holds this double perspective: explaining, mapping and analyzing different goals/formats/methods of more and less collaborative

approaches, but at the same time taking a critical approach to the theme by understanding related risks, effects, prospects and corrective actions. Next to a conceptual part, the book brings together case-studies from around the world. The focus is in describing and understanding various formats of collaboration and critically evaluating its effects and prospects. A concluding

chapter discusses the role of partnership and leadership in realizing various levels of environmental innovations: optimization and re-design, that usually affect only a small part of the production/consumption structure, and much more complicated, radical innovations that have to deal with societal (sub)systems. The book is in part an edited version of selected papers
