Distance education is practised in all parts of the world and in recent years, its scope has developed enormously and rapidly. It has become an intrinsic part of many national educational systems and an academic discipline in its own right. Research into the area has produced a body of theory which is now being used to improve its practice. This new edition of *Theory and Practice of Distance Education* has been thoroughly updated both by describing how practice has changed, and by examining recent research in the field. Like the first edition, this book provides a comprehensive survey of distance education, looking at it globally and discussing the different lines of thought and models used. It describes the place of distance education in educational thinking, its various theories, principles, and techniques of presentation, its organization and its administration.

The result is a systematic analysis of the game, famous plays, problems and theories of practice - an indispensable handbook for the novice as well as the experienced player.

Now in paperback, nine lectures from Jacques Derrida that challenge the influential Marxist distinction between thinking and acting. *Theory and Practice* is a series of nine lectures that Jacques Derrida delivered at the École Normale Supérieure in

1976 and 1977. The topic of “theory and practice” was associated above all with Marxist discourse and particularly the influential interpretation of Marx by Louis Althusser. Derrida’s many questions to Althusser and other thinkers aim at unsettling the distinction between thinking and acting. Derrida’s investigations set out from Marx’s “Theses on Feuerbach,” in particular the eleventh thesis, which has often been taken as a mantra for the “end of philosophy,” to be brought about by Marxist practice. Derrida argues, however, that Althusser has no such end in view and that his discourse remains resolutely philosophical, even as it promotes the theory/practice pair as primary values. This seminar also draws fascinating connections between Marxist thought and Heidegger and features Derrida’s signature reconsideration of the dichotomy between doing and thinking. This text, available for the first time in English, shows that Derrida was doing important work on Marx long before *Specters of Marx*. As with the other volumes in this series, it gives readers an unparalleled glimpse into Derrida’s thinking at its best—spontaneous, unpredictable, and groundbreaking.

The application of 3D methodology has recently been receiving increasing attention at many PET centres, and this monograph is an attempt to provide a state-of-the-art review of this methodology, covering 3D reconstruction methods, quantitative procedures, current tomography performance, and clinical and research applications. No such review has been available until now to assist PET researchers in understanding and implementing 3D methodology, and in evaluating the performance of the available imaging technology. In all the chapters, the subject matter is treated in sufficient depth to appeal equally to the

physicist or engineer who wishes to establish the methodology, and to PET investigators with experience in 2D PET who wish to familiarize themselves with the concepts and advantages of 3D, and to be made aware of the pitfalls.

This important new book develops a new concept of autonomy. The Theory and Practice of Virtue Institute for Judaism & Civilization, Incorporated

This book argues that Kant’s theory of international relations should be interpreted as an attempt to apply the principles of reason to history in general, and in particular to political conditions of the late eighteenth century. It demonstrates how Kant attempts to mediate between a priori theory and practice, and how this works in the field of international law and international relations. Kant appreciates how the precepts of theory have to be tested against the facts, before the theory is enriched to deal with the complexities of their application. In the central chapters of this book, the starting points are apparent contradictions in Kant’s writings; assuming that Kant is a systematic and profound thinker, Cavallar seeks to use these contradictions to discover Kant’s ‘deep structure’, a dynamic and evolutionary theory that tries to anticipate a world where the idea of international justice might be more fully realized.

Transforming the Education of Lawyers Springer

"Neither an academic tome nor a prescriptive 'how to' guide, *The Theory and Practice of Online Learning* is an illuminating collection of essays by practitioners and scholars active in the complex field of distance education. Distance education has evolved significantly in its 150 years of existence. For most of this time, it was an individual pursuit defined by infrequent postal

communication. But recently, three more developmental generations have emerged, supported by television and radio, teleconferencing, and computer conferencing. The early 21st century has produced a fifth generation, based on autonomous agents and intelligent, database-assisted learning, that has been referred to as Web 2.0. The second edition of "The Theory and Practice of Online Learning" features updates in each chapter, plus four new chapters on current distance education issues such as connectivism and social software innovations."--BOOK JACKET.

Many books instruct readers on how to use the tools of policy analysis. This book is different. Its primary focus is on helping

readers to look critically at the strengths, limitations, and the underlying assumptions analysts make when they use standard tools or problem framings. Using examples, many of which involve issues in science and technology, the book exposes readers to some of the critical issues of taste, professional responsibility, ethics, and values that are associated with policy analysis and research. Topics covered include policy problems formulated in terms of utility maximization such as benefit-cost, decision, and multi-attribute analysis, issues in the valuation of intangibles, uncertainty in policy analysis, selected topics in risk analysis and communication, limitations and alternatives to the paradigm of utility maximization, issues in behavioral decision theory, issues related to organizations and multiple agents, and selected topics in policy advice and policy analysis for government.
