aims in this

book are beauty, depth of insight, and brevity. The text is split into forty lectures, each about eight pages long. Trefethen and Bau, **NUMERICAL LINEAR ALGEBRA** Numerical linear algebra, sometimes called applied linear algebra, is the study of how matrix operations can be used to create computer algorithms which efficiently and accurately provide approximate answers to questions in continuous mathematics. It is a subfield of numerical analysis, and a type of linear algebra. Computers use floating-point arithmetic and cannot exactly represent ...
