That is why a large part of *Strategic Intelligence for the Future 2* analyzes the various aspects of information, from traditional processing and research to the psychological and epigenetic aspects of its development. This leads to a new vision of its integration into organizations. In addition, new technologies offer extensive access to information, including social networks which are critically analyzed here. In a complex world where geopolitics and the new concept of information warfare are becoming increasingly important, it becomes imperative to better apprehend and understand our environment, in order to develop critical thinking that will reinforce the different global aspects of security in economic intelligence.

The fast progress in computer networks and their wide availability complemented with on one hand the "explosion" of the mobile computing and on the other hand the trends in the direction of ubiquitous computing, act as powerful enablers for new forms of highly dynamic collaborative organizations and emergence of new business practices. The first efforts in virtual enterprises (VE) were strongly constrained by the need to design and develop horizontal infrastructures aimed at supporting the basic collaboration needs of consortia of enterprises. Even pilot projects that were focused on specific business domains were forced to

first develop some basic infrastructures before being able to develop their specific business models. Nowadays, although there is still a need to consolidate and standardize the horizontal infrastructures, the focus is more and more directed to the development of new vertical business models and the corresponding support tools. At the same time, in the earlier R&D projects, the attention was almost exclusively devoted to the operation phase of the VE life cycle, while now there are more activities addressing the creation phase, developing mechanisms to support the rapid formation of new virtual organizations for new business opportunities. In order to complete the life cycle, there is a need to also invest on support for VE dissolution.

Why businesses should never underestimate the power of place. Today's business leaders are so obsessed with all things global and virtual that they risk neglecting the critical impact of physical place. It's a paradox of the Internet age: now that it's possible for businesses to be everywhere at once, they need to focus on what it means to be one specific place at a time. The best global brands, from IBM to McDonald's, are by design also the leading local brands. For instance, your decision to patronize Starbucks will depend on whether it's the best local coffee shop in your neighborhood, not on how many thousands of global locations it has. Marketing experts John Quelch and Katherine Jocz offer a new way to think about place in every strategic decision—from how to leverage consumer associations with locations to where to

position products on the shelf. They explore case studies such as Nike and The Apple Store, which use place in creative ways. Drawing on a blend of hard data and engaging anecdotes, this book will help any business-from global mega-brands to boutique, small town stores- influence customers more effectively.
