During the turbulent 1960s, the city of New Orleans experienced unprecedented economic growth, racial tensions and desegregation, political realignment, and natural disaster. Presiding over this period of sweeping change was Mayor Victor H. Schiro (1904-1992), an unassuming, moderate Democrat who sought the best for his city and adhered strictly to the rule of law in a region where *laissez faire* was standard practice and hardened defiance was a social norm. Schiro sought fairness for all and navigated a gauntlet of conflicting pressures. African Americans sought their civil rights, and whites resisted the new racial environment. Despite vigorous opposition and an unfriendly press, Schiro won election twice. Under his direction, the city experienced numerous municipal reforms, the inclusion of African Americans in executive positions, and the broad extension of city services. The mayor, a businessman, recruited new corporations for his city, heralded the development of New Orleans East, and brought major professional sports to the Crescent City. He also initiated the plans for the construction of the Superdome. At the height of this activity, Hurricane Betsy devastated New Orleans. In response, Schiro coordinated with the federal government to initiate rescue and recovery at a rapid pace. In the aftermath, he lobbied Congress for relief funds that set the precedent for National Federal flood insurance.

The classic guide to creative ideas, strategies, and campaigns in advertising, now in a revised and updated third edition In creative advertising, no amount of glossy presentation will improve a bad idea. That’s why this book is dedicated to the first and most important lesson: concept. Structured to provide both a complete course on advertising and a quick reference on specific industry topics, it covers every aspect of the business, from how to write copy and learn the creative process to how agencies work and the different strategies used for all types of media. This edition has been updated to include expanded chapters on interactive advertising and integrative advertising, a new chapter on branded social media, and fifty specially drawn new roughs of key campaigns. Pete Barry outlines simple but fundamental rules about how to “push” an ad to turn it into something exceptional, while exercises throughout help readers assess their own work and that of others. Fifty years’ worth of international, award-winning ad campaigns—in the form of over 450 “roughs”

specially produced by the author, fifty of which are new to this edition—also reinforce the book’s core lesson: that a great idea will last forever.

This work examines the factors that drive the success of Multinational Corporations (MNCs) in their pursuit of regional strategies. The author develops a comprehensive regional success factor model, by which the effects of regional management autonomy and regional product and service adaptation on the regional success of MNCs as well as the interaction effects of regional orientation and inter-regional distance are investigated. The model is evaluated by means of the partial-least-squares (PLS) method on the basis of a survey-based inquiry of the Fortune Global 500 firms with success indicator data for a period of nine years. The findings highlight the importance of considering the different degrees of contextual influence in the design of regional strategies, where low degrees of regional management autonomy and high levels of regional product/service adaptation are found to be appropriate for MNCs to be regionally successful.

We all know the bad news. Every day, along with all the bulletins on social upheavals and terrorist attacks, we read reports of another animal species on the brink of extinction, of how our ocean fisheries are collapsing, and of the damage industrial development is wreaking on our soil, air and water. We drive bigger cars, eat pesticide-sprayed, genetically altered foods and consume so much energy that even rich, industrialized countries suffer power outages. We seem intent on continuing to live this way, even though many scientific experts tell us our actions are suicidal. The good news, Suzuki and Dressel tells us, is that thousands of individuals, groups and businesses are already changing their ways. A growing number of companies are still making money while benefiting their local communities. Anti-globalization activists and Third World villagers are learning how to practice real participatory democracy and create real community. Farmers and ranchers are sharing their land with other species, including predators and pests, while still prospering. Even some governments, local and national, are starting to base economic development strategies on our collective dependency on nature, while decreasing large-scale interference in our ecosystems.

Aluminium (Al) is a metal of great importance because of its excellent corrosion resistance, high electrical and thermal conductivity, good reflectivity, and very good recycling characteristics. The properties of heat-treatable Al-alloys can be further enhanced by the inclusion of a reinforcing phase that increases the mechanical properties of the overall composite.

This book is a comprehensive guide on the different types of aluminum alloys and the new advances that have been made in developing and manufacturing aluminum alloys and composites. This text provides a comprehensive overview of the processing, formability, and chemical composition of aluminum alloys and composites. Part One is focused on evaluating the types and properties of advanced aluminum alloys and composites, while Part Two explores characterization. The advantage of this book is that it provides a detailed review of major advances that have occurred in the development and application of aluminum alloys and composites while outlining a development strategy for these materials.

A hydrogen economy, in which this one gas provides the source of all energy needs, is often touted as the long-term solution to the environmental and security problems associated with fossil fuels. However, before hydrogen can be used as fuel on a global scale we must establish cost effective means of producing, storing, and distributing the gas, develop cost efficient technologies for converting hydrogen to electricity (e.g. fuel cells), and creating the infrastructure to support all this. Sorensen is the only text available that provides up to date coverage of all these issues at a level appropriate for the technical reader. The book not only describes the "how" and "where" aspects of hydrogen fuels cells usage, but also the obstacles and benefits of its use, as well as the social implications (both economically and environmental). Written by a world-renowned researcher in energy systems, this thoroughly illustrated and cross-referenced book is an excellent reference for researchers, professionals and students in the field of renewable energy. Updated sections on PEM fuel cells, Molten carbonate cells, Solid Oxide cells and Biofuel cells Updated material to reflect the growing commercial acceptance of stationary and portable fuel cell systems, while also recognizing the ongoing research in automotive fuel cell systems A new example of a regional system based on renewable energy sources reflects the growing international attention to uses of renewable energy as part of the energy grid Examples of life cycle analysis of environmental and social impacts

Titanium and titanium alloys are used in many demanding applications in aerospace and terrestrial systems because of their excellent combination of mechanical properties and corrosion resistance. However, high costs resulting from an energy-intensive extraction process and complex fabrication sequence exclude titanium alloys from many applications. This proceedings volume will address all aspects of potential cost reduction of titanium alloys, covering such segments of titanium technology as extraction, creative melting including cold-hearth approaches, near-net-shape techniques, processing and fabrication advances, high-speed machining and knowledge-based processing with emphasis on computer-aided approaches, improved process control, and creative designs. This volume will be of widespread interest to materials scientists and engineers working in the aerospace, automobile, chemical processing, medical, and consumer industries.
