How to Start and Run Your Own Food Truck Business in Georgia John Wiley & Sons

"This book reconsiders the foundations of contract law by clarifying the meaning of fairness and choice. It shows how these ideas were muddled with rise of voluntarism and conceptualism in the nineteenth century. Contract was defined in term of the will of the parties, even though often the parties are bound by terms to which they did not consciously assent and sometimes they are not bound by harsh terms to which they assented. Rules were formulated without regard to the purposes that contract law serves. Current theory and practice recognize these problems but cannot resolve them because they lack a clear idea of fairness in exchange. They approach them by manipulating the idea of choice, or by creating exceptions to previously accepted rules, or by introducing vaguely conceived policy considerations. Economic approaches disregard fairness entirely. This book revives a pre-nineteenth century idea of fairness in exchange. This idea is consistent with modern economic thought and can reconcile concerns about fairness, party autonomy, and the purposes that a contact serves for society and the parties themselves. This book presents an account of contract law that is principled, comprehensive, systematic, and operational in the sense that it explains or criticizes what courts actually do. It seeks to explain the enforceability of contracts, unconscionability, the effect of mistake, and changed circumstances, and

problems of assent, interpretation, good faith, and remedies"--

The first edition of Cold and Chilled Storage Technology was prepared at a time when great changes were taking place in the industry that were hard to put into clear perspective. For example, the CFClozone layer problem was identified, the Montreal Protocol was signed and experts from many disciplines were already proposing 'solutions' to the problems seen at the time. Not only were there the usual differences in approach to the problems, there were different understandings of the problems themselves. For in stance, some authoritative voices were saying HCFC 22 was 'part of the solution, not part of the problem' and recommending it as the main refrig erant for the future,

others said the opposite. As editor, I have taken the view that this should be a 'reference book' and, as such, it should contain information that points in the direction of tried and proven good practice. To avoid the risk of misdirecting readers, I decided that the CFC issue was too unclear to be usefully discussed in the first edition and left it out altogether. This was the main criticism of the first edition at the time of its publication but, in view of the developments since then, I stand by my decision to avoid premature comment in that instance. The matter is discussed in this edition in Chapters 4 and 7, which include summaries of other related factors, in a way that was certainly not possible in 1989.

Timely and authoritative research on the latest issues in tax policy. Tax Policy and the Economy publishes current academic research on taxation and government spending with both immediate bearing on policy debates and longer-term interest. This volume of Tax Policy and the Economy presents new research on

important issues concerning US taxation and transfers. First, Edward L. Glaeser, Caitlin S. Gorbach, and James M. Poterba examine the distribution of burdens associated with taxes on transportation. Replacing the gasoline tax with a vehicle-miles-traveled (VMT) tax would increase the burden on higher-income households, who drive more fuel-efficient cars and are more likely to own electric vehicles. User charges for airports, subways, and commuter rail are progressive, while the burden of bus fees is larger for lower-income households than for their higher-income counterparts. Next, Katarzyna Bilicka, Michael Devereux, and Irem Güçeri investigate tax shifting by multinational companies (MNCs) and the implications of a potential Global Minimum Tax (GMT). They find that MNCs shift intellectual property to tax havens, and that a large share of patenting activity takes place in tax havens where little or no R&D occurs. Tax havens are particularly important for MNCs with large subsidiary networks; such firms would likely be subject to a GMT. Mark Duggan, Audrey Guo, and Andrew C. Johnston study the role of experience rating in the Unemployment Insurance (UI) system and find that the current structure stabilizes the labor market because it penalizes firms with high rates of UI-eligible layoffs. In the fourth paper, David Altig, Laurence J. Kotlikoff, and Victor Yifan Ye calculate how retiring at different ages will affect Social Security benefit amounts, taking into account taxation and other benefits. They find that virtually all individuals aged 45 to 62 should wait until age 65 or later to maximize their Social Security benefits. Indeed, 90 percent would benefit from waiting until age 70, but only 10 percent do so. Finally, Jonathan

Meer and Joshua Witter examine the potential impact of the Earned Income Tax Credit on the labor force decisions of childless adults who are eligible for a small credit after they reach age 25. Comparing labor force attachment changes just before and after this age suggests that the EITC has little impact on the labor force participation of this group.
