Master linear regression techniques with a new edition of a classic text Reviews of the Second Edition: "I found it enjoyable reading and so full of interesting material that even the well-informed

reader will probably find something new . . . a necessity for all of those who do linear regression." —Technometrics, February 1987 "Overall, I feel that the book is a valuable addition to the now considerable list of texts on applied linear regression. It should be a strong contender as the leading text for a first serious course in regression analysis." —American Scientist, May–June 1987 Applied Linear Regression, Third Edition has been thoroughly updated to help students master the theory and applications of linear regression modeling. Focusing on model building, assessing fit and reliability, and drawing conclusions, the text demonstrates how to develop estimation, confidence, and testing procedures primarily through the use of least squares regression. The essential resource for navigating the growing direct loan market *Private Debt: Opportunities in Corporate Direct Lending* provides investors with a single, comprehensive resource for understanding this asset class amidst an environment of tremendous growth. Traditionally a niche asset class pre-crisis, corporate direct lending has become an increasingly important allocation for institutional investors—assets managed by Business Development Company structures, which represent 25% of the asset class, have experienced over 600% growth since 2008 to become a \$91 billion market. Middle market direct lending has traditionally been relegated to commercial banks, but onerous Dodd-Frank regulation has opened the opportunity for private asset managers to replace banks as corporate lenders; as direct loans have thus far escaped the low rates that decimate yield, this asset class has become an increasingly attractive option for institutional and retail investors. This book dissects direct loans as a class, providing the critical background information needed in order to work effectively with these assets. Understand direct lending as an asset class, and the different types of loans available Examine the opportunities, potential risks, and historical yield Delve into various loan investment vehicles, including the Business Development Company structure Learn how to structure a direct loan portfolio, and where it fits within your total portfolio The rapid rise of direct lending left a knowledge gap surrounding these nontraditional assets, leaving many investors ill-equipped to take full advantage of ever-increasing growth. This book provides a uniquely comprehensive guide to corporate direct lending, acting as both crash course and desk reference to facilitate smart investment decision making.

The best way to select emerging markets to exploit is to evaluate their size or growth potential, right? Not according to Krishna Palepu and Tarun Khanna. In *Winning in Emerging Markets*, these leading scholars on the subject present a decidedly different framework for making this crucial choice. The authors argue that the primary exploitable characteristic of emerging markets is the lack of institutions (credit-card systems, intellectual-property adjudication, data research firms) that facilitate efficient business operations. While such "institutional voids" present challenges, they also provide major opportunities-for multinationals and local contenders. Palepu and Khanna provide a playbook for assessing emerging markets' potential and for crafting strategies for succeeding in those markets. They explain how to:

- Spot institutional voids in developing economies, including in product, labor, and capital markets, as well as social and political systems
- Identify opportunities to fill those voids; for example, by building or improving market institutions yourself
- Exploit those opportunities through a rigorous five-phase process, including studying the market over time and acquiring new capabilities

Packed with vivid examples and practical toolkits, *Winning in Emerging Markets* is a crucial resource for any company seeking to define and execute business strategy in developing economies.
