This book is an introduction in the very best sense of the word. It provides the beginner with an accurate, sophisticated, yet accessible account, and offers new insights and challenging perspectives to those who have more specialized knowledge. Focusing on the period in Chinese philosophy that is surely most easily approachable and perhaps is most important, it ranges over a rich set of competing options. It also, with admirable self-consciousness, presents a number of daring attempts to relate those options to philosophical figures and movements from the West. I recommend it very highly. --Lee H. Yearley, Walter Y. Evans-Wentz Professor, Religious Studies, Stanford University --- A substantial and highly accessible introduction to the indigenous philosophies of China. Van Norden shares his clear distillations of classical

Chinese philosophies using conceptual frameworks many will find familiar. This reader-friendly book sets the historical and cultural contexts for the philosophies discussed, and includes appendices, study questions, and imaginative scenarios, which aid us in appreciating some of the most important philosophy ever developed. --Ann Pirruccello, Professor of Philosophy, University of San Diego --- This lucid introduction to early Chinese thought offers historical, textual and conceptual analyses of the schools of Classical Chinese philosophy, illuminating their basic themes, theories, and arguments and providing readers with an intellectual bridge between Chinese and Western thought. Introductory texts such as this are especially needed today, as the study of philosophy faces the challenges of globalization and the urgent need for dialogue among different philosophical traditions. --- An ideal text for introductory courses, this book will also inspire graduate students,

scholars and experts in philosophy in general, and Chinese Philosophy in particular, with its theoretical insights and comparative methodology. --Vincent Shen, Lee Chair in Chinese Thought and Culture, Departments of Philosophy and East Asian Studies, University of Toronto

Philosophical Propositions is a fresh, up to date, and reliable introduction to philosophical problems. It takes seriously the need for philosophy to deal with definitive and storable

propositions, such as God, certainty, time, personal identity, the mind/body problem, free will and determinism, and the meaning of life.

The philosophy of perception investigates the nature of our sensory experiences and their relation to reality. Raising questions about the conscious character of perceptual experiences, how they enable us to acquire knowledge of the world in which we live, and what exactly it is we are aware of when we hallucinate or dream, the philosophy of perception is a growing area of interest in metaphysics, epistemology, and philosophy of mind. William Fish's *Philosophy of Perception* introduces the subject thematically, setting out the major theories of perception together with their motivations and attendant problems. While providing historical background to debates in the field, this comprehensive overview focuses on recent presentations and defenses of the different theories, and looks beyond visual perception to take into account the role of other senses.

Topics covered include: the phenomenal principle perception and hallucination perception and content sense-data, adverbialism and idealism disjunctivism and relationalism intentionalism and combined theories the nature of content veridicality perception and empirical science non-visual perception. With summaries and suggested further reading at the end of each chapter, this is an ideal introduction to the philosophy of perception.

Philosophy for Everyone begins by explaining what philosophy is before exploring the questions and issues at the foundation of this important subject. Key topics in this new edition and their areas of focus include: Moral philosophy – the nature of our moral judgments and reactions, whether they aim at some objective moral truth, or are mere personal or cultural preferences; and the possibility of moral

responsibility given the sorts of things that cause behavior; Political philosophy – fundamental questions about the nature of states and their relationship to the citizens within those states
 Epistemology – what our knowledge of the world and ourselves consists in, and how we come to have it; and whether we should form beliefs by trusting what other people tell us; Philosophy of mind – what it means for something to have a mind, and how minds should be understood and explained; Philosophy of science – foundational conceptual issues in scientific research and practice, such as whether scientific theories are true; and Metaphysics – fundamental questions about the nature of reality, such as whether we have free will, or whether time travel is possible. This book is designed to be used in conjunction with the free ‘Introduction to Philosophy’ MOOC (massive open online course) created by the University of Edinburgh’s Eidyn research centre, and hosted by the Coursera platform (www.coursera.org/course/introphil). This book is also highly recommended

for anyone looking for a short overview of this fascinating discipline.
The Philosophy Major’s Introduction to Philosophy Routledge
 Consolation of Philosophy (Latin: *Consolatio Philosophiae*) is a philosophical work by Boethius, written around the year 524. It has been described as the single most important and influential work in the West on Medieval and early Renaissance Christianity, and is also the last great Western work of the Classical Period. Anicius Manlius Severinus Boëthius, commonly called Boethius (c. 480–524 or 525 AD), was a philosopher of the early 6th century. He was born in Rome to an ancient and prominent family which included emperors Petronius Maximus and Olybrius and many consuls. His father, Flavius Manlius Boethius, was consul in 487 after Odoacer deposed the last Western Roman Emperor. Boethius, of the noble Anicia family, entered public life at a young age and was already a senator by the age of 25. Boethius himself was consul in 510 in the kingdom of the Ostrogoths. In 522 he saw his two sons become consuls. Boethius was

imprisoned and eventually executed by King Theodoric the Great, who suspected him of conspiring with the Eastern Roman Empire. While jailed, Boethius composed his *Consolation of Philosophy*, a philosophical treatise on fortune, death, and other issues. The *Consolation* became one of the most popular and influential works of the Middle Ages. *Introduction to Classical Chinese Philosophy* Gale, Cengage Learning

 What is mathematics about? Does the subject-matter of mathematics exist independently of the mind or are they mental constructions? How do we know mathematics? Is mathematical knowledge logical knowledge? And how is mathematics applied to the material world? In this introduction

to the philosophy of mathematics, Michele Friend examines these and other ontological and epistemological problems raised by the content and practice of mathematics. Aimed at a readership with limited proficiency in mathematics but with some experience of formal logic it seeks to strike a balance between conceptual accessibility and correct representation of the issues. Friend examines the standard theories of mathematics - Platonism, realism, logicism, formalism, constructivism and structuralism - as well as some less standard theories such as psychologism, fictionalism and Meinongian philosophy of mathematics. In each case Friend explains what characterises the position and where the divisions between them lie, including some of the arguments in favour and against each. This book also explores particular questions that occupy present-day philosophers and mathematicians such as the problem of infinity, mathematical intuition and the relationship, if any, between the philosophy of mathematics and the practice of mathematics.

Taking in the canonical ideas of Aristotle, Kant, Frege and Whitehead and Russell as well as the challenging and innovative work of recent philosophers like Benacerraf, Hellman, Maddy and Shapiro, Friend provides a balanced and accessible introduction suitable for upper-level undergraduate courses and the non-specialist. Is the history of life a series of accidents or a drama scripted by selfish genes? Is there an "essential" human nature, determined at birth or in a distant evolutionary past? What should we conserve—species, ecosystems, or something else? Informed answers to questions like these, critical to our understanding of ourselves and the world around us, require both a knowledge of biology and a philosophical framework

within which to make sense of its findings. In this accessible introduction to philosophy of biology, Kim Sterelny and Paul E. Griffiths present both the science and the philosophical context necessary for a critical understanding of the most exciting debates shaping biology today. The authors, both of whom have published extensively in this field, describe the range of competing views—including their own—on these fascinating topics. With its clear explanations of both biological and philosophical concepts, *Sex and Death* will appeal not only to undergraduates, but also to the many general readers eager to think critically about the science of life.

A primer on the bedrock principles of politics from “Harvard’s most controversial conservative professor” and the author of *Democracy in America* (Boston magazine).

Behind the daily headlines on presidential races and local elections is the theory of the polity—or what the end of our politics should be.

Harvard’s Harvey C. Mansfield, one of America’s leading political theorists, explains why our quest for the good life must address the type of government we seek to uphold. He directs our gaze to the thinkers and philosophies and classic works that have proved most influential throughout the ages.

An Introduction to Philosophy by Soccio, Douglas J. Univ of California Press

This is the most exciting and comprehensive text with integrated readings for introducing students to philosophy. It presents the big picture with all the right details. The central idea is to embed the best excerpts from the most important writings of the most important philosophers into one seamless, coherent adventure story in such a way that the reader takes part in the process of

discovery. Instead of reading about philosophy, readers acquire philosophical insights into themselves and the world by acquiring a knowledge of philosophical ideas presented in their original contexts. Organized both historically and topically, the book can be used either chronologically or by topics, and to facilitate this for instructors it contains two separate tables of contents. The book covers all the major philosophers from the pre-Socratics to twentieth-century philosophy with a scope wide enough to embrace all schools and traditions—from the analytic and continental to non-western. This approach enables readers to understand the connection between many different ways of looking at ourselves and the world, to obtain a broad and multi-perspectival vision of all the best that philosophy has had to offer, by building philosophical bridges across national, cultural, religious, historical, and scholarly borders.

Philosophy of Economics

As a growing area of research, the philosophy of time is increasingly relevant to different areas of philosophy and even

other disciplines. This book describes and evaluates the most important debates in philosophy of time, under several subject areas: metaphysics, epistemology, physics, philosophy of language, philosophy of mind, cognitive science, rationality, and art. Questions this book investigates include the following. Can we know what time really is? Is time possible, especially given modern physics? Must there be time because we cannot think without it? What do we experience of time? How might philosophy of time be relevant to understanding the mind-body relationship or evidence in cognitive science? Can the philosophy of time help us understand biases toward the future and the fear of death? How is time relevant to art—and is art relevant to philosophical debates about time? Finally, what exactly could time travel be? And could time travel satisfy emotions such as nostalgia and regret? Through asking such questions, and showing how they might be best answered, the book demonstrates the importance philosophy of

time has in contemporary thought. Each of the book's ten chapters begins with a helpful introduction and ends with study questions and an annotated list of further reading. This and a comprehensive bibliography at the end of the book prepare the reader to go further in their study of the philosophy of time.

'Philosophy: The Basics deservedly remains the most recommended introduction to philosophy on the market. Warburton is patient, accurate and, above all, clear. There is no better short introduction to philosophy.' - Stephen Law, author of *The Philosophy Gym*

Philosophy: The Basics gently eases the reader into the world of philosophy. Each chapter considers a key area of philosophy, explaining and exploring the basic ideas and themes including: Can you prove God exists? How do we know right from wrong? What are the limits of free speech? Do you know how science works? Is your mind different from your

body? Can you define art? How should we treat non-human animals? For the fifth edition of this best-selling book, Nigel Warburton has added an entirely new chapter on animals, revised others and brought the further reading sections up to date. If you've ever asked 'what is philosophy?', or wondered whether the world is really the way you think it is, this is the book for you.
