This text provides undergraduate engineering students with a systematic treatment of both the theory and applications of mechanics of materials. With a strong emphasis on basic concepts and techniques throughout, the text focuses on analytical understanding of the subject by the students. An abundance of worked-out examples, depicting realistic situations encountered in engineering design, are aimed to develop skills for analysis and design of components. To broaden the student's capacity for adopting other forms of solving problems, a few typical problems are presented in C programming language at the end of each chapter. The book is primarily suitable for a one-semester course for B.E./B.Tech students and diploma-level students pursuing courses in civil engineering, mechanical engineering and its related branches of engineering profession

such as production engineering, industrial engineering, automobile engineering and aeronautical engineering. The book can also be used to advantage by students of electrical engineering where an introductory course on mechanics of materials is prescribed. **KEY FEATURES** □ Includes numerous clear and easy-to-follow examples to illustrate the application of theory to practical problems. □ Provides numerous end-of-chapter problems for study and review. □ Gives summary at the end of each chapter to allow students to recapitulate the topics. □ Includes C programs with quite a few C graphics to encourage students to build up competencies in computer applications.

About the Book: Written by three distinguished authors with ample academic and teaching experience, this textbook, meant for diploma and degree students of Mechanical Engineering as well as those preparing for AMIE examination, incorporates the latest Mechanical Sciences-1(Wbut) Graphic Communications Group
It is with great pleasure

that we present to you a collection of over 200 high quality technical papers from more than 10 countries that were presented at the Biomed 2008. The papers cover almost every aspect of Biomedical Engineering, from artificial intelligence to biomechanics, from medical informatics to tissue engineering. They also come from almost all parts of the globe, from America to Europe, from the Middle East to the Asia-Pacific. This set of papers presents to you the current research work being carried out in various disciplines of Biomedical Engineering, including new and innovative researches in emerging areas. As the organizers of Biomed 2008, we are very proud to be able to come-up with this publication. We owe the success to many individuals who worked very hard to achieve this: members of the Technical Committee, the Editors, and the International Advisory Committee. We would like to take this opportunity to record our thanks and appreciation to each and every one of them. We are pretty sure that you will find many of the papers illuminating and useful for your own research and study. We

hope that you will enjoy yourselves going through them as much as we had enjoyed compiling them into the proceedings.

14th Nordic – Baltic Conference on Biomedical Engineering and Medical Physics – NBC-2008 – brought together scientists not only from the Nordic – Baltic region, but from the entire world. This volume presents the Proceedings of this international conference, jointly organized by the Latvian Medical Engineering and Physics Society, Riga Technical University and University of Latvia in close cooperation with International Federation of Medical and Biological Engineering (IFMBE) The topics covered by the Conference Proceedings include: Biomaterials and Tissue Engineering; Biomechanics, Artificial Organs, Implants and Rehabilitation; Biomedical Instrumentation and Measurements, Biosensors and Transducers; Biomedical Optics and Lasers;

Healthcare Management, Education and Training; Information Technology to Health; Medical Imaging, Telemedicine and E-Health; Medical Physics; Micro- and Nanoobjects, Nanostructured Systems, Biophysics

Detection, Adhesion, and Removal Graphic Communications Group Gives a clear and thorough presentation of the fundamental principles of mechanics and strength of materials. Provides both the theory and applications of mechanics of materials on an intermediate theoretical level. Useful as a reference tool by postgraduates and researchers in the fields of solid mechanics as well as practicing engineers. *For IES, GATE, PSC and PSU, NET/SET/JRF* PHI Learning Pvt. Ltd.

This volume chronicles the proceedings of the Third Symposium on Particles on Surfaces : Detection, Adhesion and Removal held as a part of the 21st Annual Meeting of the Fine Particle Society in San Diego , California, August 21 - 25 , 1990 . The first two symposia in t h i s series were held in 1986 and 1988 , respectively, and have been properly l documented ,2. Li ke its

antecedent s the Third symposium was very well received, and the continuing success of these symposia reinforced our earlier belief that regular symposia on the topic of particles on surfaces were very much needed. Concomitantly, the fourth symposium in this series is planned in Las Vegas , July 13-17 , 1992 . l As pointed out in the Preface to the earlier two volumes ,2, the topic of particles on surfaces is of tremendous interest and concern in a wide spectrum of technological areas . The objectives of the Third symposium were es s ent i a l l y the same as those of the earlier two and our intent her e was to provide an update on the research and development activities in the world of particles on surfaces . Apropos , there has been a deliberate attempt every time to s eek out new people to present their research results and we have been very succes s f u l in this mission.
