When a young bilingual child experiences language difficulties, it can be hard to tell if those challenges are due to a disorder or just limited exposure to the English language. That's a critical distinction--because while limited language exposure will fix itself over time, a language impairment is a clinical issue that will cause the child difficulties in school without timely and effective intervention. Now there's a valid, reliable assessment that specifically responds to the needs of young Spanish-English bilingual children. For use with children ages 4 through 6 years who have varying degrees of bilingualism, the Bilingual English-Spanish Assessment (BESA) was developed to: identify phonological and/or language impairment in bilingual children and English language learners using a standardized protocol

differentiate between a delay in English language acquisition and a true language disorder document children's speech and language strengths and needs monitor children's progress in both languages and use the information to make decisions about intervention How BESA Works Through a combination of subtests for students and surveys for teachers and parents, BESA reveals the big picture of a young bilingual child's language development. Comprehensive assessment with BESA includes: 3 subtests (in both English and Spanish). These three standardized-norm-referenced subtests address the key domains of morphosyntax, semantics, and phonology. The subtests are administered with children one-on-one in a quiet, well-lit, well-ventilated room free of distractions. 2 questionnaires. The SLP gathers more information by interviewing both parents and teachers. Bilingual Input-Output Survey (BIOS): determines Spanish and English use at home and school and pinpoints which language(s) need testing Inventory to Assess Language Knowledge (ITALK): identifies the parent's and teacher's perception of the child's performance in each language and highlights areas of possible concern. Pragmatic activity. This 5- to 10-minute warmup activity, in which children are asked to "help wrap a present" with the examiner, is used to establish rapport with the child and give clinicians an idea of how collaborative and interactive the child will be during the rest of the assessment. BESA Benefits Valid and reliable. There are very few assessment tools for bilingual children, and even fewer that are valid and reliable. BESA answers the call for a bilingual assessment backed up with solid evidence of validity and reliability. Culturally and linguistically appropriate. BESA subtests are different for each

language; the Spanish subtest isn't just a translation of the English one. Dialects were taken into consideration--the norming sample included 17 Spanish dialects and 7 regional dialects for English--and items were developed for each language based on the markers, structure, and culture of that language. Uncovers the full picture of a child's language development. Not only does BESA identify language impairments, it also helps you gauge progress in both languages and document a child's dominant language across different domains of speech and language. This critical information will help you plan interventions and educational programming for bilingual children. Flexible and convenient. You can use each BESA component independently or combine them as part of an assessment battery. Choose which component you want to give--you're not required to administer both the English and Spanish subtests. BESA can also be given over multiple sessions, so you can easily fit it into your schedule. Spanish Workbook, Grade 2 Prentice Hall

This volume collects most recent work on the role of technology in mathematics education. It offers fresh insight and understanding of the many ways in which technological resources can improve the teaching and learning of mathematics. The first section of the volume focuses on the question how a proposed mathematical task in a technological environment can influence the acquisition of knowledge and what elements are important to retain in the design of mathematical tasks in computing environments. The use of white smart boards, platforms as Moodle, tablets and smartphones have transformed the way we communicate both inside and outside the mathematics classroom. Therefore the second section discussed how to make efficient use of these resources in the classroom and beyond. The

third section addresses how technology modifies the way information is transmitted and how mathematical education has to take into account the new ways of learning through connected networks as well as new ways of teaching. The last section is on the training of teachers in the digital era. The editors of this volume have selected papers from the proceedings of the 65th, 66th and 67th CIEAEM conference, and invited the correspondent authors to contribute to this volume by discussing one of the four important topics. The book continues a series of sourcebooks edited by CIEAEM, the Commission Internationale pour l'Étude et l'Amélioration de l'Enseignement des Mathématiques / International Commission for the Study and Improvement of Mathematics Education.
