 "An excellent guide on how teams can

effectively work together, regardless of location."  
 —STEPHANE KASRIEL, former CEO of Upwork IN TODAY'S MODERN GLOBAL ECONOMY, companies and organizations in all sectors are embracing the game-changing benefits of the remote workplace. Managers benefit by saving money and resources and by having access to talent outside their zip codes, while employees

enjoy greater job opportunities, productivity, independence, and work-life satisfaction. But in this new digital arena, companies need a plan for supporting efficiency and fostering streamlined, engaging teamwork. In Work Together Anywhere, Lisette Sutherland, an international champion of virtual-team strategies, offers a complete blueprint for optimizing team success by supporting

Learn to audit the security of networks, web applications, databases, mail servers, Microsoft Windows servers/workstations and even ICS systems. Learn to develop your own modules for the Nmap Scripting Engine. Become familiar with Lua programming.

100% practical tasks, relevant and explained step-by-step with exact commands and optional arguments description  
Who This Book Is For The book is for anyone who wants to master Nmap and its scripting engine to perform real life security auditing checks for system administrators and penetration testers. This book is also recommended to anyone looking to

learn about network security auditing. Finally, novice Nmap users will also learn a lot from this book as it covers several advanced internal aspects of Nmap and related tools. What You Will Learn Learn about Nmap and related tools, such as Ncat, Ncrack, Ndiff, Zenmap and the Nmap Scripting Engine Master basic and advanced techniques to perform port scanning and host discovery Detect

insecure configurations and vulnerabilities in web servers, databases, and mail servers Learn how to detect insecure Microsoft Windows workstations and scan networks using the Active Directory technology Learn how to safely identify and scan critical ICS/SCADA systems Learn how to optimize the performance and behavior of your scans Learn about	advanced reporting Learn the fundamentals of Lua programming Become familiar with the development libraries shipped with the NSE Write your own Nmap Scripting Engine scripts In Detail This is the second edition of 'Nmap 6: Network Exploration and Security Auditing Cookbook'. A book aimed for anyone who wants to master Nmap and its scripting	engine through practical tasks for system administrators and penetration testers. Besides introducing the most powerful features of Nmap and related tools, common security auditing tasks for local and remote networks, web applications, databases, mail servers, Microsoft Windows machines and even ICS SCADA systems are explained step by step with

exact commands and argument explanations. The book starts with the basic usage of Nmap and related tools like Ncat, Ncrack, Ndiff and Zenmap. The Nmap Scripting Engine is thoroughly covered through security checks used commonly in real-life scenarios applied for different types of systems. New chapters for Microsoft Windows and ICS SCADA systems were added and

every recipe was revised. This edition reflects the latest updates and hottest additions to the Nmap project to date. The book will also introduce you to Lua programming and NSE script development allowing you to extend further the power of Nmap. Style and approach This book consists of practical recipes on network exploration and security auditing techniques, enabling you

to get hands-on experience through real life scenarios. *Byte Home Systems* During the transition from the clinical base year to the first clinical anesthesia year (CA-1), the resident finds himself transforming from a bright and confident intern to an entirely unprepared anesthesiology resident surrounded by unfamiliar equipment and drugs and confronted by patients with acute and dynamically

changing physiologies. This book is a concise step-by-step ready reference manual which will help interns to transition smoothly to life in the operating room within the first few months. Anesthesiology CA-1 Pocket Survival Guide will flatten the learning curve and improve the comfort level of trainees entering the OR for the first time. Intended to help provide a smooth transition from

intern to resident anesthesiologist, it highlights information to seek out during the orientation period. It provides easy-to-follow instructions for such common tasks as preparing the anesthesia machine, positioning the patient, and entering information into the electronic management system (EMS) and suggests how to obtain and organize a patient's preoperative information to

present to the attending anesthesiologist.

This is the bench and field scientist's guide to well-established, reliable techniques for use in microbiology and microbial ecology. It provides a good starting place for those who are beginning to investigate aspects of the microbial community, and a refresher for more experienced researchers.

Chapters on bacteria with interesting metabolic traits are augmented with chapters on molecular techniques, lipis analysis, and appropriate sampling techniques. A special section includes valuable information on biofilm development, bioremediation, modeling of biological systems, and the study of phylogenetics. Unlike other texts, which present theory in microbial ecology, this one contains

the applications that can be used throughout one's research.

This is the first comprehensive research monograph devoted to the use of augmented reality in education. It is written by a team of 58 world-leading researchers, practitioners and artists from 15 countries, pioneering in employing augmented

reality as a new teaching and learning technology and tool. The authors explore the state of the art in educational augmented reality and its usage in a large variety of particular areas, such as medical education and training, English language education, chemistry learning, environmental and special education, dental training,

mining engineering teaching, historical and fine art education. *Augmented Reality in Education: A New Technology for Teaching and Learning* is essential reading not only for educators of all types and levels, educational researchers and technology developers, but also for students (both graduates and undergraduat

es) and anyone who is interested in the educational use of emerging augmented reality technology. *Augmented Reality in Education* Elsevier
