### KIMBERLY WATSON

The Child's Concept of Story Psychology Press

Katherine Nelson re-centers developmental psychology with a revived emphasis on development and change, rather than foundations and continuity. Nelson argues that a child's entrance into the community of minds is a gradual process with enormous consequences for child development, and the adults that they become.

*Incredible Answers to Prayer* InterVarsity Press

Comprehension of texts and understanding of questions is a cornerstone of successful human communication. Whilst reading comprehension has been thoroughly investigated in the last decade, there is surprisingly little research on children's comprehension of picture stories, particularly for bilinguals. This can be partially explained by the lack of cross-culturally robust, cross-linguistic instruments targeting early narration. This book presents an inference-based model of narrative comprehension and a tool that grew out of a large-scale European project on

multilingualism. Covering a range of language settings, the book uses the Multilingual Assessment Instrument for Narratives to answer the question which narrative comprehension skills (bilingual) children can be expected to master at a certain age, and explores how such comprehension is affected (or not affected) by linguistic and extra-linguistic factors. Linking theory to method, the book will appeal to researchers in linguistics and psychology and graduate students interested in narrative, multilingualism, and language acquisition.

It was five degrees below zero, and Roger Morneau was out of gas. If his toes froze, they would have to be amputated. The man bowed his head in prayer. "It was almost as if something hit the back of my automobile and it shot forward," he says. "Then the motor started to accelerate and hummed like never before." He drove the 27 miles to safety without a drop of gas!

The papers in this volume in honor of Sandra Annear Thompson deal with complex sentences, an important topic in Thompson's career. The focus of the contributions is on the ways in which the grammatical properties of complex sentences are shaped by the communicative context in which

they are produced, an approach to grammatical analysis that Thompson pioneered and developed in the course of her distinguished career.

*Grammar for Writing Workbook, Grade 9* BRILL

In this volume, the results of a number of empirical studies of the development of narrative construction within a multilingual context are presented and discussed. It is explored what operating principles underlie the process of narrative production in L1 and L2. Developmental relations between form and function will be studied across a broad range of functional categories, such as temporality, perspective, connectivity, and narrative coherence. Moreover, a variety of language contact situations is considered with broad variation in the typological distances between the languages in order to enable cross-linguistic comparison. The analysis of learner data in various cross-linguistic settings may thus offer new information on the role of the structural properties of unrelated languages on the process of narrative acquisition. In the present volume, an attempt is also made to find out how transfer from one language to the other is facilitated. Finally, the effects of input on narrative construction in children's first and second language are examined in several studies.

Beyond Nature-Nurture: Essays in Honor of Elizabeth Bates is a very special tribute to the University of California at San Diego psycholinguist, developmental psychologist, and cognitive scientist Elizabeth Ann Bates, who died on December 14, 2003 from pancreatic cancer. Liz was a force of nature; she was also a nurturing force, as is evidenced by this collaborative collection of chapters written by many of her closest colleagues and former students. The book covers a brilliant career of wide-ranging interdisciplinary interests, such as the brain bases of language in children and adults; language and cognitive development in normal and neurologically impaired populations of children; real-time language processing in monolinguals and bilinguals; and crosslinguistic comparisons of language development, language use, and language loss. In this volume the contributors provide up-to-date reviews of these and other areas of research in an attempt to continue in the directions in which she has pointed us. The genius of Bates is founded on a deep dedication to science, supported by an enduring sense of humor. The volume is introduced by the editors' collection of "Bates's aphorisms," the wisdom of which guide much of the field today: "[T]he human capacity for language could be both innate and species-specific, and yet involve no mechanisms that evolved specifically and uniquely for language itself. Language could be viewed as a new machine constructed entirely out of old parts." (Bates & MacWhinney, 1989) The volume also contains a list of her many important publications, as well as some personal reflections of some of the contributors, noting ways in which she made a difference in their lives. Beyond Nature-Nurture: Essays in Honor of Elizabeth Bates appeals to international scholars in the fields of developmental psycholinguistics, cognitive science, crosslinguistic research, and both child and adult language disorders. It is a state-of-the-art overview of many areas of cognitive science, and can be used in a graduate-level classroom in courses designed as seminars in any of these topics.

This book sets a high standard for rigor and scientific approach to the study of bilingualism and provides new insights regarding the critical issues of theory and practice, including the interdependence of linguistic knowledge in bilinguals, the role of socioeconomic status, the effect of different language usage patterns in the home, and the role of schooling by single-language immersion as opposed to systematic training in both home and target languages. The rich landscape of outcomes reported in the volume will provide a frame for interpretation and understanding of effects of bilingualism for years to come.

*Interdisciplinary perspectives on methodological issues* Routledge

This volume consists of a collection of papers that focus on structural/grammatical aspects of the process of first language attrition. It presents an overview of current research, methodological issues and important questions regarding first language attrition. In particular, it addresses the two most prominent issues in current L1 attrition research: Can attrition effects impact on features of core syntax, or are they limited to interface phenomena?, and; What is the role of age at onset (pre-/post-puberty) in this regard? By investigating attrition in a variety of settings, from a case study of a Spanish-speaking adoptee in the US to an empirical investigation of more than 50 long-term attriters of Turkish in the Netherlands, the investigations presented take a new perspective on these issues. *Language Development Across Childhood and Adolescence* John Benjamins Publishing

The study of language acquisition has taken on new meaning in the last decade. Now seen as part of the study of other forms of language variation across time and space, such as dialects and sociolects, and the study of pidgins and Creoles, it can help to provide a new understanding of how language evolves and what directs its development. Dorit Ravid here provides a study of contemporary speakers of Hebrew, focusing in particular on inflectional morphology. She traces language development from childhood to adulthood in Hebrew speakers, and explores strategies of language acquisition and language processing leading to variation in the spoken Hebrew of speakers of different ages and socioeconomic backgrounds.

*The Interactive Reader Plus* John Wiley & Sons

This volume brings together work by scholars with backgrounds in linguistics, psycholinguistics, developmental psychology, education, and language pathology. As such, the book adds psycholinguistic and crosslinguistic perspectives to the clinical and classroom approaches that have dominated the study of later language development. Incorporating insights from prior language acquisition research, it goes beyond preschool age to consider both isolated utterances and extended discourse, conversational interactions and monologic text construction, and both written and spoken language use from early school-age across adolescence. Data from French, Hebrew, Spanish, and Swedish as well as English cover varied domains: morphology and lexicon, syntax and verb argument structure, as well as peer interaction, spelling, processing of on-line writing, and reading poetry. The epilogue suggests explanations for the findings documented. Across the book, the authors show how cognitive and social maturation combines with increased literacy in the path taken by schoolchildren and adolescents towards the flexible deployment of a growing repertoire of lexical elements in varied morpho-syntactic constructions and different discourse contexts that constitutes the hallmark of maturely proficient language use.
