Solar Energy Update CRC
Press

This volume contains the

proceedings of the third
Euroconference on Atomic
Physics at Accelerators
(APAC 2001), with the title
Stored Particles and
Fundamental Physics. It
was held in Aarhus,
Denmark, from

September 8 to 13 at the
Marselis Hotel located
near the beach and the
Marselis Woods outside
Aarhus, but some of the
activities took place at the
Department of Physics,
University of Aarhus. The

conference was sponsored by the Commission of the European Union (Contract No. ERBFMMACT980469) and also by the Danish Research Foundation through ACAP (Aarhus Center for Atomic Physics). The meeting was focused on the application of storage rings for atomic physics, and there are two fairly small rings in Aarhus, ASTRID (Aarhus Storage Ring for Ions, Denmark) and ELISA (Electrostatic Ion Storage ring, Aarhus). The research at these rings

has contributed to the strong position of European Science in this field. Both rings are designed according to unique concepts. ASTRID is a dual purpose ring, which half the time stores electrons for the generation of low-energy synchrotron radiation. The storage of negative particles has also been a unique feature for the application of ASTRID as an ion storage ring.

Abstracts MHRA

These Proceedings provide a general

overview as well as detailed information on the developing field of reliability and safety of technical processes in automatically controlled processes. The plenary papers present the state-of-the-art and an overview in the areas of aircraft and nuclear power stations, because these safety-critical system domains possess the most highly developed fault management and supervision schemes. Additional plenary papers covered the recent developments in

analytical redundancy. In total there are 95 papers presented in these Proceedings.

This book is intended for those with an academic, scientific and practical interest in river conservation and management. It provides an overview of how changes in legislation, policies, institutional responsibilities, science, technology, practical techniques and public perception have influenced how rivers

have been managed over the past 20 years and the challenges that lie ahead during the next 20 years. The book is based on the international conference River Conservation and Management: 20 Years On held at York. Thirty-one chapters, with contributions from North and South America, Europe, Asia and Australasia provide a wide-ranging perspective on this complex but profoundly important subject. Following an introduction that chronicles the most

important contextual changes, the book is organized into four broad topics: Catchment management, ecosystem integrity and the threats to river ecosystems - this covers progress on understanding and addressing the pressures affecting rivers, many of which will be amplified by climate change and increasing human demands for water; Methods and approaches - illustrating some recent techniques that have been developed to assess condition and

conservation status across different types of river; Recovery and rehabilitation – providing an insight into the principles, practice, public involvement and institutional networks that support and make improvements to modified river reaches; Integrating nature conservation into wider river management –demonstrating the importance of integrated planning, involvement of local communities and the use of adaptive management in achieving multiple environmental

and economic benefits along rivers used for different purposes. The final chapter discusses the challenges faced in dealing with an uncertain future. More than 1200 different references and numerous web-site citations provide the reader with an invaluable source of knowledge on the subject area.

Daily Report Springer Science & Business Media Semiannual, with semiannual and annual indexes. References to all scientific and technical literature coming from

DOE, its laboratories, energy centers, and contractors. Includes all works deriving from DOE, other related government-sponsored information, and foreign nonnuclear information. Arranged under 39 categories, e.g., Biomedical sciences, basic studies; Biomedical sciences, applied studies; Health and safety; and Fusion energy. Entry gives bibliographical information and abstract. Corporate, author, subject, report number indexes.

The Journal of the

Acoustical Society of America John Wiley & Sons

This copiously annotated bibliography documents and examines the whole range of commentary on Strindberg's works and activity in many fields besides the plays for which he is internationally best known. These include his prose fiction and poetry, his work as an historian and natural historian, and his relationship to the other arts, most notably his painting. It is concerned with both lasting works of

literary and dramatic criticism, as well as reviews of his books and plays in the theatre, and some more ephemeral material, all of this in several languages. Organised generically and by subject and individual work, the bibliography enables the reader to trace the changing impact of Strindberg and his works in various countries and during different periods. It is thus very much a study in reception as well as a bibliographical record of published material. It

traces the developing image of Strindberg and his writing both during his lifetime and in subsequent years, and with frequent cross reference offers a comprehensive overview of a literary and existential project that has rarely been matched for its multifaceted diversity. The bibliography is published in three parts. Volume 1, General Studies (978-0-947623-81-4) and Volume 2, The Plays (978-0-947623-82-1) are also now available. Michael Robinson is

Emeritus Professor of Drama and Scandinavian Studies at the University of East Anglia, Norwich. *Chemical News and Journal of Physical Science*
 These proceedings present papers in instrumentation & techniques for electron & other microscopies. The theme of this conference was the physics of imaging & microanalytical processes.
