The present work is the
result of the First
International Chariot
Conference, jointly

organised by the
Netherlands-Flemish
Institute in Cairo (NVIC)
and the American
University in Cairo (AUC)
(30 November to 2
December 2012). The
intention of the
conference was to make a
broad assessment of the
current state of
knowledge about chariots
in Egypt and the Near
East, and to provide a

forum for discussion. A
wide variety of papers are
included, ranging from
overviews to more
detailed studies focusing
on a specific topic. These
include philology,
iconography, archaeology,
engineering, history, and
conservation. The book is
of interest to scholars as
well as anyone with an
interest in ancient
technology,

transportation, or warfare. *Practical Data Analytics for Innovation in Medicine* Destiny Image Publishers For almost half a century, Vivian Nutton has been a leading figure in the study of ancient (and less ancient) medicine. The field itself has been revolutionised over that time. In this volume distinguished colleagues and former students develop, in his honour, key themes of his ground-breaking scholarship. Spanning from the Bronze Age to the Digital Age, involving the cult of

Artemis and the corpuscular theories of Asclepiades of Bithynia, the medicinal uses of beavers and the cost of health-care and wet-nursing, case-histories, remedy exchange and the medical repercussions of political assassination, this book has at its centre the pluralism and diversity of the ancient medical marketplace. The lively interplay between choice and competition, unity and division, communication and debate, so notable in Vivian Nutton's

foundational vision of the world of classical medicine, is richly examined across these pages.

The new edition of the popular survey of Near Eastern civilization from the Bronze Age to the era of Alexander the Great A Companion to the Ancient Near East explores the history of the region from 4400 BCE to the Macedonian conquest of

the Persian Empire in 330 BCE. Original and revised essays from a team of distinguished scholars from across disciplines address subjects including the politics, economics, architecture, and heritage of ancient Mesopotamia and Egypt. Part of the Blackwell Companions to the Ancient World series, this acclaimed single-volume reference combines lively writing with engaging and relatable topics to immerse readers in this fascinating period of Near East history. The new

second edition has been thoroughly revised and updated to include new developments in relevant fields, particularly archaeology, and expand on themes of interest to contemporary students. Clear, accessible chapters offer fresh discussions on the history of the family and gender roles, the literature, languages, and religions of the region, pastoralism, medicine and philosophy, and borders, states, and warfare. New essays highlight recent discoveries in cuneiform texts, investigate how

modern Egyptians came to understand their ancient history, and examine the place of archaeology among the historical disciplines. This volume: Provides substantial new and revised content covering topics such as social conflict, kingship, cosmology, work, trade, and law Covers the civilizations of the Sumerians, Hittites, Babylonians, Assyrians, Egyptians, Israelites, and Persians, emphasizing social and cultural history Examines the legacy of

the Ancient Near East in the medieval and modern worlds Offers a uniquely broad geographical, chronological, and topical range Includes a comprehensive bibliographical guide to Ancient Near East studies as well as new and updated references and reading suggestions Suitable for use as both a primary reference or as a supplement to a chronologically arranged textbook, *A Companion to the Ancient Near East*, 2nd Edition is a valuable resource for advanced

undergraduates, beginning graduate students, instructors in the field, and scholars from other disciplines. *The Expressiveness of the Body and the Divergence of Greek and Chinese Medicine* Little, Brown Spark Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches

Florence, New Haven, Paris, and Vienna. The central witness is a papyrus of fifteen columns in the Berlin Museum. Written almost entirely in the Demotic script, the Book of Thoth is probably the product of scribes of the "House of Life", the temple scriptorium. It comprises largely a dialogue between a deity, usually called "He-who-praises-knowledge" (presumably Thoth himself) and a mortal, "He-who-loves-knowledge". The work covers such topics as the

scribal craft, sacred geography, the underworld, wisdom, prophecy, animal knowledge, and temple ritual. Particularly remarkable is one section (the "Vulture Text") in which each of the 42 nomes of Egypt is identified with a vulture. The language is poetic; the lines are often clearly organized into verses. The subject-matter, dialogue structure, and striking phraseology raise many issues of scholarly interest; especially intriguing are the possible

connections between this Egyptian work, in which Thoth is called "thrice-great", and the classical Hermetic Corpus, in which Hermes Trismegistos plays the key role. The first volume comprises interpretative essays, discussion of specific points such as the manuscript tradition, script, and language. The core of the publication is the transliteration of the Demotic text, translation, and commentary. A consecutive translation, glossary, bibliography, and indices conclude the

first volume. The second volume contains photographs of the papyri, almost all of which reproduce their original size.

Unlock the healing power of cannabis medicine and discover the cutting-edge science behind its remarkable impact on human health. Millions of people around the world are healing illnesses with cannabis. Nonetheless, many physicians remain reluctant to discuss

cannabis medicine with their patients. And with so much conflicting misinformation from unreliable sources, finding out if cannabis could be an effective treatment for you or a loved one can feel nearly impossible.

This book is the comprehensive resource for people who have not found relief from conventional medicines. Bonni Goldstein, MD, has helped thousands of patients suffering from chronic, difficult-to-treat conditions improve with cannabis. In this

revelatory book, she explains the current state of scientific research on how cannabis interacts with human physiology to create homeostasis -- balance -- leading to good health. Many of the plant's compounds, including CBD and CBG, and their therapeutic effects are explained in detail. Readers will learn how to best navigate the multitude of available cannabis-based products, with detailed guidance on safety and usage, and how to customize a personalized cannabis

regimen. And Dr. Goldstein presents 28 common conditions for which patients have found cannabis treatment to be effective, including cancer, insomnia and gastrointestinal disorders. As medical cannabis laws continue to evolve, it is more vital than ever for struggling patients to understand the benefits of this plant from an honest, medicine-based perspective. Educational, practical, and thorough, Cannabis Is Medicine empowers patients to make informed decisions

about this natural medicine and improve the quality of their lives.

Ancient Medicine in Its Socio-Cultural Context, Volume 1 Twenty-First Century Books

This volume makes available in English translation a selection of Jacques Jouanna's papers on Greek and Roman medicine, ranging from the early beginnings of Greek medicine to late antiquity.

A Spotlight on the History of Ancient Egyptian Medicine Penguin

This collection of papers –

some of which written by the world's leading specialists in the area of ancient medicine – aims at promoting an integrated approach to medical theory and practice in classical antiquity. Questions of health and disease are considered in their relation to the social, intellectual, moral and religious dimensions of the ancient world. The papers focus on the socio-cultural setting of the experience of pain and illness, the different reactions they provoked

and the importance that was attached to this experience in literature, religion and philosophy. The first volume offers articles (from an archaeological, historical and philological point of view) dealing with social, institutional and geographical aspects of medical practice. It also has a special section on medical views on women, children and sexuality, and on female medical activity. The second volume focuses on the ways in which religious and magical beliefs

influenced the experience of, and the attitude towards, illness and medical practice. It also deals with the relations of medicine with philosophy, and the other sciences and with the variety of linguistic and textual forms in which medical knowledge was expressed and communicated. Contributors to the first volume are Lawrence J. Bliquez, Simon Byl, Armelle Debru, Nancy Demand, Danielle Gourevitch, Ann Ellis Hanson, H.F.J. Horstmanshoff, Ralph

Jackson, Eva C. Keuls, Jukka Korpela, Ernst Künzl, Gabriele Marasco, Attilio Mastrocinque, Karin Nijhuis, Vivian Nutton, H.W. Pleket, Heikki Solin, Peter Van Minnen, and Juliane C. Wilmanns.

Body of Health explores the power of personal energy, describing levels of awareness that can facilitate healing on many levels: spiritual, physical, and mental. The techniques covered here are designed to help readers increase their

understanding of intuition, color, the chakra system, meditation, and other theories and methods as they work in healing. The author has developed these techniques over many years helping nurses, doctors, and other medical practitioners discover the source of pain and disease and guiding patients to more effective healing therapies. The areas covered in this wide-ranging yet accessible book include aura, color, meditation, kundalini, male/female energy,

meditation, and affirmations and their role in healing. Each chapter examines one practice or theory of energy and offers examples, stories, and simple techniques that readers can use to "test" the concept. Included are descriptive charts, journal writing exercises, success stories, and step-by-step meditations. History of Psychiatry and Medical Psychology Princeton University Press From the author of *How We Die*, the extraordinary story of the development

of modern medicine, told through the lives of the physician-scientists who paved the way. How does medical science advance? Popular historians would have us believe that a few heroic individuals, possessing superhuman talents, lead an unselfish quest to better the human condition. But as renowned Yale surgeon and medical historian Sherwin B. Nuland shows in this brilliant collection of linked life portraits, the theory bears little resemblance to the truth. Through the centuries,

the men and women who have shaped the world of medicine have been not only very human, but also very much the products of their own times and places. Presenting compelling studies of great medical innovators and pioneers, *Doctors* gives us a fascinating history of modern medicine. Ranging from the legendary Father of Medicine, Hippocrates, to Andreas Vesalius, whose Renaissance masterwork on anatomy offered invaluable new insight into the human body, to

Helen Taussig, founder of pediatric cardiology and co-inventor of the original "blue baby" operation, here is a volume filled with the spirit of ideas and the thrill of discovery.

Galen of Pergamon, was a prominent Roman physician, surgeon and philosopher. The most accomplished of all medical researchers of antiquity, Galen contributed greatly to the understanding of numerous scientific

disciplines, including anatomy, physiology, pathology, pharmacology, and neurology, as well as philosophy and logic.

Galen's understanding of anatomy and medicine was principally influenced by the then current theory of humorism, as advanced by many ancient Greek physicians such as Hippocrates. His theories dominated and influenced Western medical science for more than 1,300 years. Medical students continued to study Galen's writings until well into the 19th century.

Galen conducted many nerve ligation experiments that supported the theory, which is still accepted today that the brain controls all the motions of the muscles by means of the cranial and peripheral nervous systems.

Bestselling author Dr. Josh Axe explains how to treat more than seventy diseases, lose weight, and increase vitality with traditional healing practices passed down through the ages. Long

before the first pharmaceutical companies opened their doors in the 1850s, doctors treated people, not symptoms. And although we've become used to popping pills, Americans have finally had it with the dangerous side effects, addiction and over-prescribing—and they're desperate for an alternative. Here's the good news: That alternative has been here all along in the form of ancient treatments used for eons in traditional Chinese, Ayurvedic and

Greek medicine. *Ancient Remedies* is the first comprehensive layman's guide that will bring together and explain to the masses the very best of these time-tested practices. In *Ancient Remedies*, Dr. Axe explores the foundational concepts of ancient healing—eating right for your type and living in sync with your circadian clock. Readers will learn how traditional practitioners identified the root cause of each patient's illness, then treated it with medicinal

herbs, mushrooms, CBD, essential oils, and restorative mind-body practices. What's more, they'll discover how they can use these ancient treatments themselves to cope with dozens of diseases, from ADHD to diabetes, hypothyroidism, autoimmune disease, and beyond. Through engaging language and accessible explanations, *Ancient Remedies* teaches readers everything they need to know about getting, and staying, healthy—without toxic, costly synthetic drugs.

Since 1995, more than 150,000 students and researchers have turned to *The Craft of Research* for clear and helpful guidance on how to conduct research and report it effectively. Now, master teachers Wayne C. Booth, Gregory G. Colomb, and Joseph M. Williams present a completely revised and updated version of their classic handbook. Like its predecessor, this new edition reflects the way

researchers actually work: in a complex circuit of thinking, writing, revising, and rethinking. It shows how each part of this process influences the others and how a successful research report is an orchestrated conversation between a researcher and a reader. Along with many other topics, *The Craft of Research* explains how to build an argument that motivates readers to accept a claim; how to anticipate the reservations of thoughtful yet critical readers and to

respond to them appropriately; and how to create introductions and conclusions that answer that most demanding question, "So what?" Celebrated by reviewers for its logic and clarity, this popular book retains its five-part structure. Part 1 provides an orientation to the research process and begins the discussion of what motivates researchers and their readers. Part 2 focuses on finding a topic, planning the project, and locating appropriate sources. This section is brought up to

date with new information on the role of the Internet in research, including how to find and evaluate sources, avoid their misuse, and test their reliability. Part 3 explains the art of making an argument and supporting it. The authors have extensively revised this section to present the structure of an argument in clearer and more accessible terms than in the first edition. New distinctions are made among reasons, evidence, and reports of evidence. The concepts of

qualifications and rebuttals are recast as acknowledgment and response. Part 4 covers drafting and revising, and offers new information on the visual representation of data. Part 5 concludes the book with an updated discussion of the ethics of research, as well as an expanded bibliography that includes many electronic sources. The new edition retains the accessibility, insights, and directness that have made *The Craft of Research* an indispensable guide for

anyone doing research, from students in high school through advanced graduate study to businesspeople and government employees. The authors demonstrate convincingly that researching and reporting skills can be learned and used by all who undertake research projects. New to this edition: Extensive coverage of how to do research on the internet, including how to evaluate and test the reliability of sources New information on the visual representation of data

Expanded bibliography with many electronic sources
A Short History of Psychiatry Library of Alexandria
 The skills of the ancient Egyptians in preserving bodies through mummification are well known, but their expertise in the everyday medical practices needed to treat the living is less familiar and often misinterpreted. John F. Nunn draws on his own experience as an eminent doctor of medicine and an Egyptologist to reassess

the evidence. He has translated and reviewed the original Egyptian medical papyri and has reconsidered other sources of information, including skeletons, mummies, statues, tomb paintings and coffins. Illustrations highlight symptoms of similar conditions in patients ancient and modern, and the criteria by which the Egyptian doctors made their diagnoses - many still valid today - are evaluated in the light of current medical knowledge. In addition, an

appendix listing all known named doctors contains previously unpublished additions from newly translated texts. Spells and incantations and the relationship of magic and religion to medical practice are also explored. Incorporating the most recent insights of modern medicine and Egyptology, the result is the most comprehensive and authoritative general book to be published on this fascinating subject for many years.

This book chronicles the conceptual and methodological facets of psychiatry and medical psychology throughout history. There are no recent books covering so wide a time span. Many of the facets covered are pertinent to issues in general medicine, psychiatry, psychoanalysis, and the social sciences today. The divergent emphases and interpretations among some of the contributors

point to the necessity for further exploration and analysis.

This book is a biography of the physician Galen of

Pergamum (A.D. 129 - ca. 216), who began his remarkable career tending to wounded gladiators in provincial Asia Minor. Later in life he achieved great distinction

as one of a small circle of court physicians to the family of Emperor Marcus Aurelius, at the very heart of Roman society. --From publisher's description.
