Leadership

 According to John Adair, the most important word in the leader's vocabulary is "we" and the

least important word is "I". But if this is true, it raises one important question: why do psychological analyses of leadership always focus on the leader as an individual - as the great "I"? One answer is that theorists and practitioners have never properly understood the psychology of "we-ness". This book fills this gap by presenting a new psychology of leadership

that is the result of two decades of research inspired by social identity and self-categorization theories. The book argues that to succeed, leaders need to create, champion, and embed a group identity in order to cultivate an understanding of 'us' of which they themselves are representative . It also shows how, by doing this, they can make a material difference to the groups,

organizations, and societies that they lead. Written in an accessible and engaging style, the book examines a range of central theoretical and practical issues, including the nature of group identity, the basis of authority and legitimacy, the dynamics of justice and fairness, the determinants of followership and charisma, and the practice and politics of leadership. The book will appeal to academics,

practitioners and students in social and organizational psychology, sociology, political science and anyone interested in leadership, influence and power.

The 13 years between the publication of the original edition of the handbook and this second edition have been marked by memorable growth in psychotherapy integration. The original classic was the first compilation of the early integrative approaches

and was hailed by one reviewer as "the bible of the integration movement." In the interim, psychotherapy integration has grown into a mature, empirically supported, and international movement. This second edition provides a state-of-the-art, comprehensive description of psychotherapy and its clinical practices by leading proponents. In addition to updates of all

of the chapters, the new edition features: (1) eight new chapters covering topics such as cognitive-analytic therapy, integrative psychotherapy with culturally diverse clients, cognitive-behavioral analysis system, and blending spirituality with psychotherapy , (2) an entirely new section with two chapters on assimilative integration, (3) updated

reviews of the empirical research on integrative and eclectic treatments, (4) chapter guidelines that facilitate comparative analyses and ensure comprehensiveness, and (5) a summary outline to help readers compare the integrative approaches. Civilization from its

origins has depended on the food, fibre, and other commodities produced by farmers. In this unique exploration of the world history of agriculture, Mark B. Tauger looks at farmers, farming, and their relationships to non-farmers from the classical societies of the Mediterranean and China through to the twenty-first century.? Viewing farmers as the most important

human interface between civilization and the natural world, Agriculture in World History examines the ways that urban societies have both exploited and supported farmers, and together have endured the environmental changes and crises that threatened food production. Accessibly written and following a chronological structure, Agriculture in World History illuminates these topics

through studies of farmers in numerous countries all over the world from Antiquity to the contemporary period. Key themes addressed include the impact of global warming, the role of political and social transformations, and the development of agricultural technology. In particular, the book highlights the complexities of recent decades: increased food production, declining

numbers of farmers, and environmental, economic, and political challenges to increasing food production against the demands of a growing population. This wide-ranging survey will be an indispensable text for students of world history, and for anyone interested in the historical development of the present agricultural and food crises. *Psychological Healing*

Practices from the World's Religious Traditions Oxford Textbooks in Clinical Psychology Embodied cognition often challenges standard cognitive science. In this outstanding introduction, Lawrence Shapiro sets out the central themes and debates surrounding embodied cognition, explaining and assessing the work of many of the key figures in the field, including George Lakoff,

Alva Noë, Andy Clark, and Arthur Glenberg. Beginning with an outline of the theoretical and methodological commitments of standard cognitive science, Shapiro then examines philosophical and empirical arguments surrounding the traditional perspective. He introduces topics such as dynamic systems theory, ecological psychology, robotics, and connectionism

, before addressing core issues in philosophy of mind such as mental representation and extended cognition. Including helpful chapter summaries and annotated further reading at the end of each chapter, *Embodied Cognition* is essential reading for all students of philosophy of mind, psychology, and cognitive science.
