 The purpose of this guide is to provide an overview of the usage and capabilities of WTI's (Western Transportation Institute) video surveillance trailers. This manual summarizes the relevant functions of the system as a whole, and of each of the components individually. This manual does not serve to replace or supersede vendor documentation for any of the trailer components. Hopefully, this document will provide an overview adequate to set up, use, and disassemble the trailers for whatever research data collection

activities may be required.

AVM-2547U, AVM-2747U owner's manual

The text describes the main features of currently available heat pumps, focusing on system operation and interactions with external heat sources. In fact, before choosing a heat pump, several aspects must be assessed in detail: the actual climate of the installation site, the building's energy requirements, the heating system, the type of operation etc. After discussing the general working principles, the book describes the main components of compression machines - for EHPs, GHPs and CO2 heat pumps. It then addresses absorption heat pumps and provides additional details on the behavior of two-fluid mixtures. The book presents a performance comparison for the different types, helping designers choose the right one for their needs, and discusses the main refrigerants. Notes on helpful additional literature, websites and videos, also concerning relevant European regulations, round out the coverage. This book will be of interest to all engineers and technicians whose work involves heat pumps. It will also benefit students in energy engineering degree programs who want to deepen their understanding of heat pumps.
