Mathematical  
Modelling Of Cardiac  
Electrical modelling of  
cardiac electrical  
activities plays a vital  
role, revealing baseline  
diagnostic information  
about the functional  
status of heart. The  
models of cardiac  
electrophysiology are  
usually governed by  
differential equations  
[3, 4] consisting of

systems of partial  
differential equations  
(PDEs) coupled to  
ordinary differential  
equations  
(ODEs). Mathematical  
Modelling of Cardiac  
Electrical Activity ... In  
recent times,  
mathematical model of  
cardiac electrical  
activity has been  
recognized as one of  
the significant  
approaches capable of  
revealing diagnostic  
information about the  
heart. However, an  
efficient and accurate  
mathematical  
technique required for  
this modelling is one of

the major problems in the field of biomedical research.[PDF] Mathematical Modelling of Cardiac Electrical ...Whole-Heart Modelling; Organ in the Body — The Forward Problem of Electrocardiology; The Inverse Problem of Electrocardiology; Modelling Other Cardiac Processes; Readership: Final year undergraduate bioengineering, physiology and applied mathematics students and academics who are interested in the area of cardiac electrophysiology.Mathematically Modelling the Electrical Activity of the HeartIn this model basic electrical components have been used to simulate the physiological functions of the human heart. The result is a simple

electrical circuit consisting of main electrical parameters that are transformed from hydraulic models and medical physiological values. Developed MATLAB based mathematical model will primarily help to understand the proper functioning of an artificial heart and its simulated ECG signals.Mathematical modelling of human heart as a ...Mathematical Modeling of the Electrical Activity of Cardiac Cells. Abstract. We introduce the Hodgkin-Huxley (HH) formulation describing the flow of ionic currents across the membrane of a cardiac cell, paying particular attention to the central concepts of activation and inactivation.Mathemati
