The 3rd edition of PACES for the MRCP has been fully revised and updated throughout to retain its pole position as the textbook to accompany core medical training (CMT) and prepare candidates for success in the Practical Assessment of Clinical Examination Skills and a future specialty career. Features Fully revised for the new Station 5 and completely updated throughout. Promotes understanding and deeper learning of modern medicine applicable to PACES and the specialist registrar. Emphasis on clinical assessment – history-taking, examination and communication skills – equipping candidates with appropriate differential diagnoses from which to develop the right diagnosis. Encourages candidates to question why a diagnosis has arisen and consider its consequences. For example, ‘Heart failure’ is not a diagnosis until a candidate has considered the differential diagnoses

of breathlessness and decided why heart failure is most likely, and then considered its cause (not always ischaemic heart disease), its presentation (acute, chronic, left or right ventricular or both) and, most importantly, the effects of it and its treatments on a patient’s life. This 3rd edition of PACES for the MRCP continues to provide fully revised, up-to-date, evidence-based coverage of investigations and treatments. Whilst the emphasis of PACES is on clinical skills, candidates who understand when, for example, a patient with rheumatoid arthritis might benefit from a biologic agent and how this will influence inflammatory disease, is better equipped for success. A one-volume text giving candidates complete preparation for the PACES exam within one portable volume 250 cases organised into the 5 stations of the PACES exam – respiratory and abdominal system, history taking, cardiovascular and nervous system, communication and ethics and skin, locomotion, eyes and endocrine systems Engaging question-and-answer approach at the end of each case – excellent

The most important core skills for medical students

to master are history taking and clinical examination. This extensively revised, eighth edition has been written with the philosophy that the acquisition of clinical skills is most effectively undertaken at the bedside. This pocketbook should be used as a companion, to be taken onto the wards and into consulting rooms where the information is most needed. The book begins with a system of history taking followed by a new chapter on the analysis of key symptoms. The remaining chapters cover physical examination of each of the major systems. Each stage of the examination starts with a detailed, step-by-step description of the examination method complemented by relevant illustrations, diagrams and tables on the facing page. This book is intended primarily for use at the outset of clinical training; once students have achieved proficiency in the basic skills of interviewing and examining, the book should also prove useful for revision. An invaluable starter book concentrating purely on the fundamentals of performing a patient

examination. Covers each body system and outlines the principles of: - taking a history - how to conduct a physical examination - specific examination points as appropriate Concentrates only on the main symptoms of disease and then the normal and abnormal physical findings. Mention of specific diseases is confined to those most commonly encountered. Compact and pocket-sized to be carried around easily. · Now in full colour double-page format · Clear simple colour line drawings covering the essentials of a clinical examination. · Published simultaneously with the Eleventh Edition of Macleod's Clinical Examination

The MRCP examination is constantly changing, reflecting the changing pressures on doctors in training. Whilst the MRCP PACES examination has evolved with the times, the core ethos of it, to act as a benchmark for sound clinical examination, logical diagnostic ability, common sense and most importantly, the development of compassionate and ethical physicians has remained unchanged. Whilst this exam has often struck fear into the hearts of junior doctors, we believe it is an assessment of progression during a

physician's training that should be relished as an opportunity to demonstrate these ageless qualities that caring practitioners should possess. This book was born out of the philosophy that all doctors sitting their MRCP PACES already have the knowledge and skill to pass the exam, but just require guidance in the correct logical approach that the Royal College is looking for. The book has, therefore, quite unlike other MRCP PACES books, avoided any attempts at being a definitive text. Rather, it has focused on the key aspects that the authors believe are required to pass the examination, in particular focus on presentation style. Whilst medicine is indeed an ocean, the most commonly examined topics have been selected to reflect the likely scenarios a candidate will face — as the old adage goes — 'common things occur commonly'. In producing this book, extensive feedback was

sought from candidates revising for the examination to reflect their needs. The layout therefore involves a methodical approach with a short introduction, similar to that presented in the exam, followed by clinical findings expected to be found. An example of presentation style has then been produced to allow the candidate to rehearse and practice this essential component of the exam. Doctors preparing for the exam have limited time due to busy work schedules. Therefore, summary books are key for candidates sitting the MRCP PACES examination. Most PACES candidates fail the exam based on history and communication stations. Therefore, attention has been paid to:
