Interviewing is used very widely in qualitative research, and takes many different forms. The qualitative interview is also a method that is constantly evolving, in response both to theoretical and technological developments. King and Horrocks present a clear and thorough guide to the use of interviews in contemporary qualitative research.

Writing in an accessible style, with many practical examples, the authors explore:

- The key debates in the philosophy and theory underlying interview methods -
- How to design and carry out interviews -
- The special requirements of group and remote (telephone and online)

interviewing - The central issues of reflexivity and ethics. The book also features a chapter which introduces the principles and practice of the thematic analysis of interview data, and the book concludes with a detailed consideration of the use of interviews in two major qualitative research traditions: phenomenological and narrative approaches. *Interviews in Qualitative Research* is a must-have text for students and researchers planning to use interview methods for themselves. It is aimed at a broad range of disciplines with examples drawn from across the social, educational and health sciences.

Housing Microfinance Springer

With contributions from 35 leading economists, this forward-looking book explores the future of development economics against the background of the past half-century of development thought and practice. Outstanding

representatives of the past two generations of development economists assess development thinking at the turn of the century and look to the unsettled questions confronting the next generation. The volume offers a thorough analysis of the broad range of issues involved in development economics, and it is especially timely in its critique of what is needed in development theory and policy to reduce poverty. An overriding issue is whether in the future 'development economics' is to be regarded simply as applied economics or whether the nature and scope of development economics will constitute a need for a special development theory to supplement general economic theory. *Frontiers of Development Economics* is an ideal reference for all those working in the international development community.

CoMap: Mapping Contagion in the Euro Area Banking Sector SAGE Publications

For MBA/graduate students taking a course in corporate finance. Using the unifying valuation framework based on the Law of One Price, top researchers Jonathan Berk and Peter DeMarzo set the new standard for corporate finance textbooks. *Corporate Finance* blends coverage of time-tested principles and the latest advancements with the practical perspective of the financial manager. With this ideal melding of the core with modern topics, innovation with proven pedagogy, Berk and DeMarzo establish the new canon in finance. The second edition reflects the constantly changing world of finance, including information on the recent financial crisis, new behavioral finance research, and updated practitioner interviews.

bookdown McGraw-Hill Companies

bookdown: Authoring Books and Technical Documents with R Markdown

presents a much easier way to write books and technical publications than traditional tools such as LaTeX and Word. The bookdown package inherits the simplicity of syntax and flexibility for data analysis from R Markdown, and extends R Markdown for technical writing, so that you can make better use of document elements such as figures, tables, equations, theorems, citations, and references. Similar to LaTeX, you can number and cross-reference these elements with bookdown. Your document can even include live examples so readers can interact with them while reading the book. The book can be rendered to multiple output formats, including LaTeX/PDF, HTML, EPUB, and Word, thus making it easy to put your documents online. The style and theme of these output formats can be customized. We used books and R primarily for examples in this book, but bookdown is not only for books or R. Most features introduced in this book also apply to other types of publications: journal papers, reports, dissertations, course handouts, study notes, and even novels. You do not have to use R, either. Other choices of computing languages include Python, C, C++, SQL, Bash, Stan, JavaScript, and so on, although R is best supported. You can also leave out computing, for example, to write a fiction. This book itself is an example of publishing with bookdown and R Markdown, and its source is fully available on GitHub.

The Extractive Industries Sector World Bank Publications

This volume explores the concept of the honest merchant, taking a broad perspective and covering a wide range of aspects. It looks at the different types of “honest merchant” conceptions originating from different cultures and

literary traditions. The book covers Japanese, Islamic, Scandinavian, Russian, German, Spanish, as well as other aspects, and studies different disciplinary backgrounds of the honest merchant, such as philosophical, economic, neuroethical, sociological and literary ones. The concept of the honest merchant has a long tradition in business ethics. In the Hanseatic League and in medieval Italy, the ideal of the honest businessman was taught since the late Middle Ages. It originated during a time when travelling merchants were often regarded with a sceptical eye. The honest merchants of their time however held clear principles in their business and took responsibility for their community. In later times, the religious notions of the concept lost their pivotal place to reason and morality. This book goes beyond the tradition of discussing business ethics in association with concepts from the Hanseatic League and medieval Italy, and puts the central concept of business ethics in a much greater perspective.

Finanzas empresariales: la decisión de inversión Universidad del Pacífico

This book, drawn from the Global Trade Analysis Project (GTAP), aims to help readers conduct quantitative analysis of international trade issues in an economy-wide framework. In addition to providing a succinct introduction to the GTAP modeling framework and data base, this book contains seven of the most refined GTAP applications undertaken to date, covering topics ranging from trade policy, to the global implications of environmental policies, factor accumulation and technological change.

Las bases de las finanzas empresariales Springer

This volume contains a selection of the

best papers presented at the 8th International Conference on Industrial Engineering and Industrial Management, XX International Conference on Industrial Engineering and Operations Management, and International IIE Conference 2014, hosted by ADINGOR, ABEPRO and the IIE, whose mission is to promote links between researchers and practitioners from different branches, to enhance an interdisciplinary perspective of industrial engineering and management. The conference topics covered: operations research, modelling and simulation, computer and information systems, operations research, scheduling and sequencing, logistics, production and information systems, supply chain and logistics, transportation, lean management, production planning and control, production system design, reliability and maintenance, quality management, sustainability and eco-efficiency, marketing and consumer behavior, business administration and strategic management, economic and financial management, technological and organizational innovation, strategy and entrepreneurship, economics engineering, enterprise engineering, global operations and cultural factors, operations strategy and performance, management social responsibility, environment and sustainability. This book will be of interest to researchers and practitioners working in any of the fields mentioned above.

Business Model Innovation Springer
This book is a collection of original papers by Robert Jarrow that contributed to significant advances in financial economics. Divided into three parts, Part I concerns option pricing theory and its foundations. The papers here deal with the famous Black-Scholes-Merton model,

characterizations of the American put option, and the first applications of arbitrage pricing theory to market manipulation and liquidity risk. Part II relates to pricing derivatives under stochastic interest rates. Included is the paper introducing the famous Heath-Jarrow-Morton (HJM) model, together with papers on topics like the characterization of the difference between forward and futures prices, the forward price martingale measure, and applications of the HJM model to foreign currencies and commodities. Part III deals with the pricing of financial derivatives considering both stochastic interest rates and the likelihood of default. Papers cover the reduced form credit risk model, in particular the original Jarrow and Turnbull model, the Markov model for credit rating transitions, counterparty risk, and diversifiable default risk.

Dragonomics Cambridge University Press

Este libro recoge la experiencia del autor como profesor del área de Finanzas en la Universidad del Pacífico. Es un texto adecuado tanto para quienes recién se inician en el estudio de esta disciplina como para aquellos profesionales del área que deseen revisar o reforzar sus conocimientos. De manera amena y didáctica, el libro introduce al lector al mundo de las finanzas de la empresa, mostrando las diversas decisiones financieras que se deben tomar y poniendo énfasis especial en la decisión de inversión. Proporciona, por ello, las herramientas necesarias para realizar el análisis correcto que conduzca a las decisiones más adecuadas, enfatizándose constantemente la aplicación de la teoría al caso peruano. *Political Crises, Social Conflict and Economic Development* Universidad del

Pacífico

This work presents a comprehensive model of supply chain management. Experienced executives from 20 companies clearly define supply chain management, identifying those factors that contribute to its effective implementation. They provide practical guidelines on how companies can manage supply chains, addressing the role of all the traditional business functions in supply chain management and suggest how the adoption of a supply chain management approach can affect business strategy and corporate performance.

Evaluación de inversiones en

mercados emergentes Kumarian Press

An insightful examination of the political and economic ties between China and Latin America from the 1950s to the present This book explores the impact of Chinese growth on Latin America since the early 2000s. Some twenty years ago, Chinese entrepreneurs headed to the Western Hemisphere in search of profits and commodities, specifically those that China lacked and that some Latin American countries held in abundance--copper, iron ore, crude oil, and soybeans. Focusing largely on Argentina, Brazil, Chile, Costa Rica, Mexico, and Peru, Carol Wise traces the evolution of political and economic ties between China and these countries and analyzes how success has varied by sector, project, and country. She also assesses the costs and benefits of Latin America's recent pivot toward Asia. Wise argues that while opportunities for closer economic integration with China are seemingly infinite, so are the risks. She contends that the best outcomes have stemmed from endeavors where the rule of law, regulatory oversight, and a clear strategy exist on the Latin American

side.

Titulización de activos en el Perú World Bank Publications

Political Crises, Social Conflict and Economic Development is a rare attempt to undertake comparative political economy analysis of the Andean region and thus represents a welcome contribution. . . It is clearly written and will engage scholars interested in Latin America from a wide range of disciplines. Jonathan di John, Journal of Agrarian Change This collection of essays on the political economy of the Andean region goes to the heart of the struggle these smaller economies face in completing crucial reforms and achieving higher growth. Andrés Solimano has brought together the best and the brightest talent from each country, the result being the most compelling analysis ever of how enclave development and a historical dependence on primary exports renders these countries distinctly Andean. As the essays argue, the political solutions and economic remedies must address this phenomenon, rather than mimicking those strategies of the larger emerging market countries in the region. Carol Wise, University of Southern California, US The contributors to this authoritative volume analyze the impact of political crises and social conflict on economic performance in the Andean region of Latin America. The blend of theory and case studies is also relevant for understanding other complex societies in the developing world and transition economies. The book provides illuminating insights on how to understand, and survive, the complicated interactions between volatile politics, unstable democracies, violence, social inequality and uneven economic performance. Recent political

economy theories are combined with valuable quantitative and qualitative information on presidential crises, breakdowns of democracy, constitutional reforms, quality of institutions, and social inequality and exclusion to understand actual country realities. Part I provides the conceptual framework and a regional perspective of the book. Part II contains five political economy country studies Bolivia, Colombia, Ecuador, Peru and Venezuela written by leading scholars in the field and former senior policymakers, including a former President. Together, the chapters highlight the detrimental effects of political instability and social conflict on economic growth and stability, as well as the feedback effects from poor economic performance on political instability and institutional fragility. The country studies warn that narrow economic reforms that do not pay adequate attention to politics, institutions and social structures are bound to fail in bringing lasting prosperity and stability to complex societies. Examining new and rich information on episodes of political turmoil, military interventions, forced presidential resignations, constitutional reforms and social uprisings, this book will be required reading for all those interested in the interface of politics and economic development.

Fondos mutuos en el Perú: ¿una oportunidad de inversión para el pequeño ahorrista? John Wiley & Sons
 Made With Creative Commons is a book about sharing. It is about sharing textbooks, music, data, art, and more. Punto de equilibrio CRC Press

This book provides some regional aspects considered by manufacturing firms in their decisions to gain competitiveness and have effects on the performance of their supply chains (SC). Some of the main aspects considered are: government's policies, fixed costs, the availability and quality of infrastructure services. This book also discusses the risks for the SC; based on a perception approach, some aspects studied are: demand, suppliers and production processes and how these are related to other elements of the SC. The authors use structural modeling to analyze the evaluation of some manufacturing practices and their impact on customer service satisfaction, agility and flexibility of the SC. The context of this study is immersed in the Mexican manufacturing industry of exportation, also known as maquiladora industry of Ciudad Juarez, México. This borderland is among the top 10 manufacturing Mexican cities. World class industries are located in this region and have been recognized around the world for their competitiveness and high performance. Therefore, the methods and results exposed in this book may be valuable and useful for readers and researchers of the SC worldwide.

The Taxation of Petroleum and Minerals John Wiley & Sons

The tenth edition of this classic management textbook features a new pronounced emphasis on global management. Equal attention is paid to the new Europe and the Pacific Rim as to the United States, and chapter cases are both domestic and international. Each of the six new Part Closings has a new International Focus section and a new Global Car Industry Case. Part closings 2

to 6 compare each of the 5 management functions in Japan, the USA and the People's Republic of China.

Interviews in Qualitative Research

Springer Science & Business Media

How governments can spur growth and innovation to solve their greatest challenges—from green energy to national security to building resilient health systems. Known around the world for challenging mainstream economics, economist Mariana Mazzucato believes that “the public sector can and should be a co-creator of wealth that actively steers growth to meet its goals” (The Financial Times). In *The Mission-Driven Economy*, she calls on governments to create the economies we need today. Mazzucato’s challenge leads off a debate on the revival of Industrial policy—roughly defined as deliberate government action to re(shape) the economy. Industrial policy has fallen out of favor in recent decades as economists defer to free markets to produce innovation and growth. Yet today thinkers across the political spectrum have begun expressing new interest in industrial policy as a way to address the most serious problems of our times: from national security and climate change, to the market’s underfunding of public goods, to sluggish economic growth and labor market dysfunction. Together, contributors make a compelling case for industrial policy—what it is, and why we need it now. Addressing investment, innovation, supply chains, and growth, they offer a robust vision of a renewed industrial policy, and what it can offer the US economy in the face of climate change and a global pandemic.

Introduction to Management

Accounting, Chap. 1-14 IAP

This publication is a derived version of the International Classification of

Functioning, Disability and Health (ICF, WHO, 2001) designed to record characteristics of the developing child and the influence of environments surrounding the child . This derived version of the ICF can be used by providers, consumers and all those concerned with the health, education, and well being of children and youth. It provides a common and universal language for clinical, public health, and research applications to facilitate the documentation and measurement of health and disability in child and youth populations.--Publisher's description.

LECTURING BIRDS ON FLYING For the past few decades, the financial world has often displayed an unreasonable willingness to believe that "the model is right, the market is wrong," in spite of the fact that these theoretical machinations were largely responsible for the stock market crash of 1987, the LTCM crisis of 1998, the credit crisis of 2008, and many other blow-ups, large and small. Why have both financial insiders (traders, risk managers, executives) and outsiders (academics, journalists, regulators, the public) consistently demonstrated a willingness to treat quantifications as gospel? Nassim Taleb first addressed the conflicts between theoretical and real finance in his technical treatise on options, *Dynamic Hedging*. Now, in *Lecturing Birds on Flying*, Pablo Triana offers a powerful indictment on the trustworthiness of financial theory, explaining—in jargon-free plain English—how malfunctions in these quantitative machines have wreaked havoc in our real world. Triana first analyzes the fundamental question of

whether financial markets can in principle really be solved mathematically. He shows that the markets indeed cannot be tamed with equations, presenting a long and powerful list of obstacles to prove his point: maverick unlawful human actions rule the markets, unexpected and unimaginable events shape the markets, and historical data is not necessarily a trustworthy guide to the future of the markets. The author then examines the sources of origin of many prevalent theories and mathematical dictums. He details how the field of financial economics evolved from a descriptive discipline to an abstract one dedicated to technically concocting professors' own versions of how such a world should work. He goes on to explain how Wall Street and other financial centers became eager employers of scientists, and how scientists became eager employees of financial firms. Triana concludes with an in-depth discussion of the most significant historical episodes of theory-caused real-life market malaise, with a strong emphasis on the current credit crisis. In the end, *Lecturing Birds on Flying* calls for the radical substitution of good old-fashioned common sense in place of mathematical decision-making and the restoration to financial power of those who are completely unchained to the iron ball of classroom-obtained qualifications.
