Sciences/Languages

Race and Human Diversity is an introduction to the study of human diversity in both its biological and cultural dimensions. Robert L. Anemone examines the biological basis of human difference and how humans have biologically and culturally adapted to life in different environments. The book discusses the history of the race concept, evolutionary theory, human genetics, and the connections between racial classifications and racism. It invites students to question the existence of race as biology, but to recognize race as a social construction with significant implications for the lived experience of individuals and populations. This second edition has been thoroughly revised, with new material on human genetic diversity, developmental plasticity and epigenetics. There is additional coverage of the history of eugenics; race in US history, citizenship and migration; affirmative action; and white privilege and the burden of race. Fully accessible for undergraduate students with no prior knowledge of genetics or statistics, this is a key text for any student taking an introductory class on race or human

diversity. Chapter 9 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution-Non Commercial-No Derivatives (CC-BY-NC-ND) 4.0 license.

Dynamics of Human Biocultural

Diversity Cognella Academic Publishing Like other Overture Books, *Mirror for Humanity* is designed to provide a concise, relatively low-cost introduction to cultural anthropology. Derived from his bestselling *Cultural Anthropology, 6/E*, Kottak has condensed and updated 19 chapters into 14, with conceptual and textual reorganization. The organization is intended to cover core and basics, while also illustrating prominent current issues. Reflecting the world itself, anthropology seems to change at an increasing pace. *Mirror for Humanity* provides a fully-up-to-date, affordable alternative.

[Explaining Human Diversity](#) Routledge Human diversity, with its myriad of different conditions involving biology, psychology, and social structures, remains one of the biggest challenges — and opportunities — facing the species. With many government and private firms now

having diversity or equality officers, programmes or committees, it is clear that human diversity is a cornerstone of policy-making at the very highest echelons. All this points to a need for proper scientific and medical information on this topic — not soft 'politically correct' sociology. This book provides the hard facts on human similarities and differences, their causes and effects on people. It covers the whole range from normal to extreme human types, and presents — for the first time — much of the author's 25 years of original research on the subject. It can also act as a family medical guide to aspects of human function, structure and disease. It covers many human topics in a humane and understandable fashion, providing much material for information and discussion. It can be used as a handbook or textbook on human diversity, but is mainly popular science for the general public. A special feature of this book is the 140 colour photos that illustrate the diversity of human life, nearly all taken by the author himself. Given the vast nature of the subject, the book seamlessly integrates relevant data from multiple disciplines including medicine, biology,

anthropology, genetics, psychology, evolution, languages, sociology, history and geography. Even controversial subjects such as race, class and culture are tackled head-on with no-nonsense scientific rigour.

Race and Human Diversity Wiley-Blackwell

An intriguing dialogue on how different groups of people in our society confront different social realities. Leading scholars explore varied approaches to diversity in the research process and offer practical guidelines on conducting diversity-conscious and diversity-sensitive projects and research.

The Challenge of Human Diversity
Routledge

Cultural Diversity in the United States: A Critical Reader is an unprecedented collection of contemporary writings authored by some of anthropology's most notable scholars-from across the discipline - on the central issues of cultural diversity in the United States. The contributors to this landmark critical reader rethink diversity, identity politics, and multiculturalism, and provide fundamental tools for the analysis and understanding of

critical political issues in the United States today.

Cultural Diversity in the United States
Waveland Press

This book lays out some of the basic problems of a biological theory of race, in particular the arbitrariness of most racial classifications based on biological differences between populations. It provides the biological background to a consideration of the biology of human differences.

The Challenge of Human Diversity
Routledge

The Challenge of Human Diversity --
Human Diversity Taylor & Francis

Why are humans so different from each other and what makes the human species so different from all other living organisms? This introductory book provides a concise and accessible account of human diversity, of its causes and the ways in which anthropologists go about trying to make sense of it. Carles Salazar offers students a thoroughly integrated view by bringing together biological and sociocultural anthropology and including perspectives from evolutionary biology and psychology.

Human Diversity World Scientific

Is there a Darwinian explanation for the evolution of human nature? The great debates about human origins, cultural history, and human nature confront us with two opposing, often irreconcilable images of human beings: biology vs. culture. Now Kuper reframes these debates and reconsiders fundamental questions of anthropology. 21 halftones.

Anthropology: the Exploration of Human Diversity McGraw-Hill

Humanities/Social Sciences/Languages Middletons fair, uncluttered synthesis of a wide-ranging topic continues to offer inspiration for thinking about what it means to be different from and similar to Others. Brief ethnographic excerpts are interwoven to demonstrate the hold that culture has on us. Such firsthand experiences, reported by anthropologists, reveal the challenging and sometimes humorous situations that can arise when we attempt to understand Others and when they do the same with us. Heralded by *Anthropology Today*: Middleton, by making the sensory and intellectual challenge of culture shock so central to his pedagogic strategy, has found common

ground that should unite all schools of cultural anthropology. The work brims with valuable insights that broaden possibilities to achieve rewarding human interaction, whether in our own neighborhood or across the globe. Arguably one of the best contemporary treatments of cultural diversity available, the latest edition includes expanded discussions of applied anthropology and ethics.

McGraw-Hill Higher Education

This lively text offers a unique, holistic approach to human diversity for

undergraduate courses in fields including anthropology, medicine, human ecology, and general education. Leading medical anthropologist Elisa Sobo rises to the challenge of truly integrating biology and culture. Her inviting writing style and fascinating examples make important new ideas from complexity theory and epigenetics accessible to undergraduates from all disciplines, regardless of academic background. Students learn to conceptualize human biology and culture concurrently—as an adaptive biocultural capacity that has helped to produce the

rich range of human diversity seen today. With clearly structured topics, an extensive glossary and suggestions for further reading, this text makes a complex, interdisciplinary topic a joy to teach.
