Vogt & Echevarria 99 Ideas and Activities for Teaching English Learners with the SIOP® Model, 1/e ISBN: 0-205-52106-1 The Perfect Companion to Making Content Comprehensible for English Learners: The SIOP® Model!!! This long-awaited new book by acclaimed authors MaryEllen Vogt and Jana Echevarria offers research-based, SIOP®-tested techniques for lessons that include the eight SIOP® components. The 99 ideas and activities in this book include a few familiar techniques that have been shown to be especially effective for ELLs, as well as many new ideas for SIOP® teachers. All promote student-to-student and teacher-to-student interaction and involvement proven to be so necessary for English language acquisition and content development. This book is surely to become an indispensable resource for teachers of English learners. Overwhelming response from reviewers!

"[T]he strategies in [the book] are useful for any classroom teacher. It supports everything teachers learn in SIOP in a concrete, easy-to-follow format. While obviously it would be best to use in conjunction with the SIOP model, some of the strategies could also be used in isolation to improve teaching practice as well. Teachers are always looking for ways to "beef up" their classroom instruction—this book gives them what they want!" - Karen Fichter, Zebulon GT Magnet Middle School, NC "This book would help to answer so many of the questions that teachers have about how to enhance their teaching. This textbook would be a welcome addition to our program and would be one of those books that teachers would keep and use for a long time after they complete their graduate course work." -Julia S. Austin, University of Alabama at Birmingham What makes 99 Ideas and Activities for Teaching English Learners with the SIOP® Model a must-have? Offers step-by-step directions and examples of content and language objectives for all ideas and activities. Provides use-tomorrow ideas and activities for implementing the eight components of the SIOP® Model. Includes 12 sample lesson

plans that illustrate how a particular activity can be effective for ALL students, and all of these sample lessons are adapted for both elementary and secondary students. Features classroom-ready content and language objectives for all relevant activities.

CogAT Practice Test (Grade 2) Research & Education Assoc.

Abstract: Graduation from high school occurs when students have passed the tenth grade Ohio Graduation Tests (OGT), attended a public or private school for the required number of days, and completed the necessary number of Carnegie units. The study was designed to examine the relationship between student graduation, gender, ethnicity, OGT Reading raw scores, OGT Mathematics raw scores, the number of days absent over four years, and the number of days present in school over four years. The Ohio Graduation Tests reflect the material that has been taught through the 10th grade, and are based on the new academic standards. The OGT Reading scores and OGT Mathematics scores are used to determine adequate yearly progress (AYP) as defined by the No Child Left Behind Act (NCLB). The goal of NCLB is for every student and student group to meet the proficient level in reading and mathematics by 2014. States must test to measure AYP and proficiency. Several instances of gender and ethnic differences in testing were found in the literature. Males generally score higher on math tests. Females generally score higher on reading tests. Testing in general has been used to classify people. Historically, mental testing in schools classified students into ability groups. The study used a convenience sample with an ex post facto design. Data were collected using the students of the graduating class of 2005-2006 from a Central Ohio urban high school. The sample size was 133, with 123 students graduating and 10 students not graduating. Descriptive statistics were used to gain an overall picture of the students, their OGT Reading and Mathematics raw scores, and the instruction time. Multiple regression and logistic regression was used to examine the relationships between the dependent and independent variables in the research questions. The results of this study found no significant relationships in test scores between gender and ethnicity. The independent variables were unable to predict student graduation. Students in this sample scored lower on both the OGT Reading and OGT Mathematics portions of the test compared to the state population. The sample level of proficiency was lower than the state percentage.

In this stimulating and timely book, Amit Goswami, PhD, shatters the widely popular belief held by Western science that matter is the primary "stuff" of creation and proposes instead that consciousness is the true foundation of all we know and perceive. His explanation of quantum physics for lay readers, called "a model of clarity" by Kirkus Reviews, sets the stage for a voyage of discovery through the common ground of science and religion, the entwined nature of mind and body, and our interconnectedness with all of creation.
