Engage

students in

mathematics

using growth

mindset

techniques

The most

challenging

parts of

teaching

mathematics

are engaging

students and

helping them

understand

the

connections

between

mathematics

concepts. In

this volume,

you'll find a

collection of

low floor, high

ceiling tasks

that will help

you do just

that, by

looking at the

big ideas at

the third-

grade level

through

visualization,

play, and

investigation.

During their

work with tens

of thousands

of teachers,

authors Jo

Boaler, Jen

Munson, and

Cathy

Williams heard

the same

message—that

they want to

incorporate

more brain

science into

their math

instruction,

but they need

guidance in

the

techniques

that work best

to get across

the concepts

they needed

to teach. So

the authors

designed

Mindset

Mathematics

around the

principle of

active student

engagement,

with tasks that

reflect the

latest brain

science on

learning.

Open,

creative, and

visual math

tasks have

been shown to

improve

student test

scores, and

more

importantly

change their

relationship

with

mathematics and start believing in their own potential. The tasks in Mindset Mathematics reflect the lessons from brain science that: There is no such thing as a math person - anyone can learn mathematics to high levels. Mistakes, struggle and challenge are the most important times for brain growth. Speed is unimportant in mathematics. Mathematics is a visual and beautiful

subject, and our brains want to think visually about mathematics. With engaging questions, open-ended tasks, and four-color visuals that will help kids get excited about mathematics, Mindset Mathematics is organized around nine big ideas which emphasize the connections within the Common Core State Standards (CCSS) and can be used with any current curriculum.
