 traverse is a function template that invokes the function Func

on each node of its tree. The expression `define_task_block` defines the task block. In this region, you have a task block `tb` to your disposal to start new tasks. Exactly that is happening in the left and right branch of the tree (line 6 and 7).  
 Multithreading with C++17 and C++20 - ModernesCpp.com I often hear the question in my seminars: What means cheaply copyable? The guidelines are quite concrete. You should not copy the parameter `p` if `sizeof(p) > 4 * sizeof(int);`

You should not use a const reference to `p` if `sizeof(p) < 3 * sizeof(int);` I assume these numbers are based on experience.

 Software testing is an investigation conducted to provide stakeholders with information about the quality of the software product or service under test. Software testing can also provide an objective, independent view of the software to allow the business to appreciate and understand the risks

of software implementation.
