The eighth edition of Explorations: An Introduction to Astronomy strives to share with students a sense of wonder about the universe and the dynamic, ever-changing science of astronomy. Written for students of various educational

backgrounds, Explorations emphasizes current information, a visually exciting art package, accessible writing, and accuracy. The new edition also features the most complete technology support package offered with any astronomy text. McGraw-Hill Education 'Pathways to Astronomy' breaks down introductory astronomy into its component parts. The huge and fascinating field of astronomy is divided into 86 units. These units are woven together to flow naturally for the person who wants to read the text like a book, but it is also possible to assign them in different orders, or skip certain units altogether. Professors can customise the

units to fit their course needs. *Pathways to Astronomy* McGraw-Hill Science, Engineering & Mathematics An outstanding collection of science fiction stories by one of the most respected names in the field. These six classic Anderson stories involve interplanetary or interstellar voyages of discovery. "The real strength of the book is . . . Anderson's genius for the novella and novelette forms. . . ".-- Booklist. Explorations McGraw-Hill Education This clear, succinct, and elegant contribution to the 'Very Short Introductions' series surveys the history of global exploration and assesses the motives, for good and ill, of

those who undertook it. Stewart Weaver traces the history of exploration from the first explorers (including Polynesian and Micronesian peoples, the ancient Greeks, Marco Polo, and Ibn Battuta), to the European discovery of America, the Enlightenment and exploration (focusing on James Cook), and the race to the north and south poles

Fred Schaaf, astronomer, author of several popular astronomy books, and contributor to *Astronomy and Sky and Telescope*, has combined an astronomy guidebook with interesting, informative and

entertaining activities and projects. Written so that it can be used and appreciated by adults and young teenagers alike, *Seeing the Sky* covers a tremendous breadth and scope of subjects that include activities for daylight and nighttime skies--the sun's corona, rainbows, atmospheric optics and much more. All 100 projects are truly original and cost-free observational activities that involve no more than the naked eye and common household materials.

 In the next decade,
 NASA, by itself and in
 collaboration with the
 European Space
 Agency, is planning a
 minimum of four
 separate missions to
 Mars. Clearly, exciting
 times are ahead for
 Mars exploration. This
 is an insider's look into
 the amazing projects
 now being developed
 here and abroad to
 visit the legendary red
 planet. Drawing on his
 contacts at NASA and
 the Jet Propulsion
 Laboratory, the author

provides stunning insights into the history of Mars exploration and the difficulties and dangers of traveling there. After an entertaining survey of the human fascination with Mars over the centuries, the author offers an introduction to the geography, geology, and water processes of the planet. He then briefly describes the many successful missions by NASA and others to that distant world. But failure and frustration also get their due. As the author makes clear, going to Mars is not, and never will be, easy. Later in the book, he describes in detail what each upcoming mission will involve. In the second half of the book, he offers the reader a glimpse inside the world of Earth-

based "Mars analogs," places on Earth where scientists are conducting research in hostile environments that are eerily "Martian." Finally, he constructs a probable scenario of a crewed expedition to Mars, so that readers can see how earlier robotic missions and human Earth simulations will fit together. All this is punctuated by numerous firsthand interviews with some of the finest Mars explorers of our day, including Stephen Squyres (Mars Exploration Rover), Bruce Murray (former director of the Jet Propulsion Laboratory), and Peter Smith (chief of the Mars Phoenix Lander and the upcoming OSIRIS-REx missions). These stellar individuals give us an

insider's view of the difficulties and rewards of roaming the red planet. The author's infectious enthusiasm and firsthand knowledge of the international space industry combine to make a uniquely appealing and accessible book about Mars.
