 To uphold family honor and tradition, Sheetal Prasad is forced to forsake the man she loves and marry playboy millionaire Rakesh Dhanraj while the citizens of Raigun, India, watch in envy. On her wedding night, however, Sheetal quickly learns that the stranger she married is as cold as the marble floors of the Dhanraj mansion. Forced to smile at family members and cameras and pretend there's nothing wrong with her marriage, Sheetal begins to discover that the family she married into harbors secrets, lies and deceptions powerful enough to tear apart her world. With no one to rely on and no escape, Sheetal must ally with her husband in an attempt to protect her infant son from the tyranny of his family.sion.

 The Darwinian theory of evolution is itself evolving and this book presents the details of the core of

modern Darwinism and its latest developmental directions. The authors present current scientific work addressing theoretical problems and challenges in four sections, beginning with the concepts of evolution theory, its processes of variation, heredity, selection, adaptation and function, and its patterns of character, species, descent and life. The second part of this book scrutinizes Darwinism in the philosophy of science and its usefulness in understanding ecosystems, whilst the third section deals with its application in disciplines beyond the biological sciences, including evolutionary psychology and evolutionary economics, Darwinian morality and phylolinguistics. The final section addresses anti-Darwinism, the creationist view and issues around teaching evolution in secondary schools. The reader learns how current experimental biology is opening important perspectives on the sources of variation, and thus of the very power of natural selection. This work examines numerous examples of the extension of the principle of natural selection and provides the opportunity to critically reflect on a rich theory, on the methodological rigour that presides in its extensions and exportations, and on the necessity to measure its advantages and also its limits. Scholars interested in modern Darwinism and scientific research, its concepts, research programs and controversies will find this book an excellent read, and those considering how Darwinism

might evolve, how it can apply to the human sciences and other disciplines beyond its origins will find it particularly valuable. Originally produced in French (Les Mondes Darwiniens), the scope and usefulness of the book have led to the production of this English text, to reach a wider audience. This book is a milestone in the impressive penetration by Francophone scholars into the world of Darwinian science, its historiography and philosophy over the last two decades. Alex Rosenberg, R. Taylor Cole Professor of Philosophy, Duke University Until now this useful and comprehensive handbook has only been available to francophones. Thanks to this invaluable new translation, this collection of insightful and original essays can reach the global audience it deserves. Tim Lewens, University of Cambridge

 This book is the fifth official archival publication devoted to RoboCup. It documents the achievements presented at the 5th Robot World Cup Soccer Games and Conferences held in Seattle, Washington, USA, in August 2001. The book contains the following parts: introduction, champion teams, challenge award finalists, technical papers, poster presentations, and team descriptions (arranged according to various leagues). This book is mandatory reading for the

rapidly growing RoboCup community as well as a valuable source of references and inspiration for R&D professionals interested in multi-agent systems, distributed artificial intelligence, and intelligent robotics.

This book provides a concise reference of the histologic and clinical findings of dermatologic conditions encountered in the inpatient setting. The text is divided into twenty chapters. Histopathologic images and corresponding clinical photographs facilitate clinical pathologic correlation of the conditions discussed in each chapter. Bulleted summaries for quick easy-to-read reference and diagnostic pearls are provided for each of the discussed entities. Each chapter ends with several case studies in which clinical presentation, histologic interpretation and work-up of these challenging scenarios are outlined. This book represents an international collaboration and a wealth of clinical expertise and years of experience of authors from Africa, Asia, Europe, North and South America. Hospital-Based Dermatopathology is a useful diagnostic guide for general pathologists, pathology and dermatology trainees, medical students, dermatopathologists, as well as dermatologists, hospitalists, and inpatient clinicians. It also serves as a useful guide in rendering histologic diagnosis for hospital-based or inpatient skin biopsies.

A practical guide for the diagnostic surgical pathologist, this new edition of Biopsy Interpretation of the Breast presents the diverse spectrum of pathologic alterations that occur in the breast in a manner analogous to that in which they are encountered in daily practice. Lesions are grouped together according to their histologic patterns rather than by the traditional benign-malignant categorization in order to simulate the way pathologists face these lesions as they examine microscopic slides on a daily basis. The role of adjunctive studies in solving diagnostic problems in breast pathology is emphasized where appropriate. In addition, the clinical significance and impact on patient management of the various diagnoses are discussed and key clinical and management points highlighted.

This book provides, for the first time, a unified approach to the application of MRI in radiotherapy that incorporates both a physics and a clinical perspective. Readers will find detailed information and guidance on the role of MRI in all aspects of treatment, from dose planning, with or without CT, through to response assessment. Extensive coverage is devoted to the latest technological developments and emerging options. These include hybrid MRI treatment systems, such as MRI-Linac and proton-guided systems, which are ushering in an era of real-time MRI guidance. The past decade has witnessed an unprecedented rise in the use of MRI in the radiation treatment of cancer. The development of highly conformal dose delivery techniques has led to a growing need to harness advanced imaging for patient treatment. With its flexible soft tissue contrast and ability to acquire functional information, MRI offers advantages at all stages of treatment. In documenting the state of the art in the field, this book will be of value to a wide range of professionals. The authors are international experts drawn from the scientific committee of the 2017 MR in RT symposium and the faculty of the ESTRO teaching course on imaging for physicists.

The automobile is one of the inventions that has made a decisive contribution to human mobility, and consequently it has become an inseparable part of modern human society. However, it is through this widespread use that its negative impacts on the environment have become so highly visible. Achievements in improving the ecological characteristics of the automobile are highly impressive: a modern car emits only a fraction of the amounts of noise and exhaust pollutants produced by its predecessors 30 years ago. The contributions to this book were written by experts, most of whom have been actively involved in the development of modern automobiles and their combustion engines for more than 30 years. They have participated in all phases of the ecological development of the automobile and summarize their experience and know-how in this book .

In what ways do films influence and interact with society? What social forces determine the kinds of movies that get made? How do movies reinforce—and sometimes overturn—social norms? As societies evolve, do the films that were once considered 'great' slip into obscurity? Which ones? Why? These questions, and many others like them, represent the mainstream of scholarly film studies today. In Engaging Cinema, Bill Nichols offers the first book for introductory film students that tackles these topics head-on. Published in a handy 'trade paperback' format, Engaging Cinema is inexpensive and utterly unique in the field—a perfect complement to or replacement for standard film texts.

This text and the terminology developed by the Papanicolaou Society of Cytopathology (P.S.C.) represents an important advance in the field of pancreaticobiliary cytopathology. This textbook/atlas is designed to present a comprehensive and state of the art approach to the cytologic diagnosis and reporting of pancreaticobiliary lesions. Chapters address each of the diagnostic categories defined by the P.S.C. The definition of each category along with the clinical pathologic entities contained within the category are discussed along with specific cytologic criteria for inclusion of a cytologic specimen within the category. Each chapter is lavishly illustrated demonstrating diagnostic criteria and examples of lesions contained within the category. Additionally, appropriate ancillary testing is discussed and where appropriate illustrated. Each chapter concludes with a discussion of appropriate management as well as estimates of malignancy risk for the category. The Papanicolaou Society of Cytopathology System for Reporting Pancreaticobiliary Cytology: Definitions, Criteria, Ancillary Testing and Management will provide the reader with a unified approach to diagnosing and reporting interpretations of cytologic specimens obtained from the pancreaticobiliary tract. This text/atlas will serve as a reference guide for pathologists, surgeons, endoscopists and radiologists.

The twelfth-century French poet Chrétien de Troyes is a major figure in European literature. His courtly romances fathered the Arthurian tradition and influenced countless other poets in England as well as on the continent. Yet because of the difficulty of capturing his swift-moving style in translation, English-speaking audiences are largely unfamiliar with the pleasures of reading his poems. Now, for the first time, an experienced translator of medieval verse who is himself a poet provides a translation of Chrétien's major poem, Yvain, in verse that fully and satisfyingly captures the movement, the sense, and the spirit of the Old French original. Yvain is a courtly romance with a moral tenor; it is ironic and sometimes bawdy; the poetry is crisp and vivid. In addition, the psychological and the socio-historical perceptions of the poem are of profound literary and historical importance, for it evokes the emotions and the values of a flourishing, vibrant medieval past.

This volume is dedicated to exploring the crossroads where complex sentences and information management - more specifically information structure and reference tracking - come together. Complex sentences are a highly relevant but understudied domain for studying notions of IS and RT. On the one hand, a complex sentence can be studied as a mini-unit of discourse consisting of two or more elements describing events, situations, or processes, with its own internal information-structural and referential organization. On the other hand, complex sentences can be studied as parts of larger discourse structures, such as narratives or conversations, in terms of how their information-structural characteristics relate to this wider context. The book offers new perspectives for the study of the interaction between complex sentences and information management, and moreover adds typological breadth by focusing on lesser studied languages from several parts of the world.

Autopsy as a field is enjoying an unexpected renaissance as new and improved uses are found for postmortem examination in quality improvement, education, and research. Increased interest in the autopsy is evident in the popular press as well as in national and international physician meetings. This text will provide an overview of topics the authors consider crucial to competent and effective autopsy practice in the 21st century. Each chapter will combine relevant theoretical background with current and practical experience-based guidance so that pathologists and clinicians can better utilize the autopsy to provide optimal value to families, patients, hospitals, and health systems. Distinguished contributors will provide a review of the rich history of autopsy practice, including assessments of how the past both informs autopsy practice and impedes its progress. The autopsy will be placed in the context of larger healthcare systems with chapters on the use of autopsy in quality improvement and evaluating the value of autopsy as a professional activity, as well as new technology that affects practice models. Better and more reproducible methods for reporting autopsy findings will be explored to exploit the full potential of autopsy data for cross-institutional research. Two chapters will also provide the first book-level review of the growing field of autopsies performed on an urgent basis to sample both diseased and normal control tissue for research. These "rapid research autopsies" are especially crucial to cancer research and the growth of personalized medicine, and the book will explain the science behind utilization of autopsy tissue and offer a full template for designing and delivering a successful rapid autopsy program. Additionally, pathologist and clinician contributors will highlight current recommendations for special techniques and ancillary testing in postmortem examinations to serve the needs of today's patient populations. As resident education is re-examined by pathology and education authorities, new competency-based training models will almost certainly come to the fore. A chapter will examine approaches to the future training of medical students, residents, and fellows in an environment of changing autopsy exposure. A final chapter will summarize the vision for the autopsy as a clinical outcome measure, and valuable scientific resource. This book will be a new type of volume in the field of autopsy pathology. It differs from the presently available review references and atlases in that it provides guidance for readers to embrace transformations that are already taking place in the field. There currently is no resource that offers comprehensive guidance for modern autopsy practice and looks forward to what the field might become in the future.

Written by more than 20 acknowledged experts, this volume is the most comprehensive and authoritative reference on diagnostic surgical pathology of the head and neck. The book describes in detail the vast array of lesions and disease entities that can occur in the head and neck and presents practical approaches to establishing a diagnosis. More than 1,100 illustrations—including 535 in full color—depict the full range of pathologic findings. The contributors discuss the most useful aids to differential diagnosis, including clinical information and data from ancillary studies such as immunohistochemistry. A chapter on diagnostic fine needle aspiration cytopathology is also included.
