Knowing Music, Making Music

ASCD
In this collection of essays, a distinguished group of innovative teachers and writers describe the approaches and techniques

they have incorporated into their own teaching. The articles are designed to help classroom teachers make language classes more participatory and communication oriented. Successive articles deal with the structure of interaction in large and small groups: imaginative activities for listening, speaking, reading, writing, and testing; the use of poetry, song, and drama; how to perform grammar rules rather than recite them; the special contribution of authentic materials; using audio and video as well as computer software to enhance learning, tapping the community as a resource; learning to interact in different cultural styles; and preparing the student for real-life professional use of language. Teachers of any language and teachers in training

will find in this volume a wealth of original and practical ideas for the classroom.

The Case in Indonesia Martino Fine Books

This compact, scholarly book treats creating a curriculum as an ongoing process, the product of which is a composite of what is intended (planned curriculum), what actually happens (enacted curriculum), and how what happens influences those involved (experienced curriculum). It proposes that desirable educational experiences arise when the interaction of these three curricula is flexible and evolving; and, therefore, the authors never advance specific, "best" practices or "most correct" answers to fundamental curriculum questions. Rather, through a finely honed discussion of essential theoretical and practical alternatives, they invite readers to develop their own points of view. Major discussions of postmodernism, autobiographical techniques, gender, and race. The book also includes coverage of recent actions by state governing agencies and boards of education and aligning curriculum with state standards. For professionals in the field of teaching. *Curriculum* Cambridge University Press

Calls for renewed moral education in America's schools, offering dozens of programs schools can adopt to teach students respect, responsibility, hard work, and other values that should not be left to parents to teach.

How Our Schools Can Teach Respect and Responsibility Corwin Press

Designed for beginning teachers, **CLASSROOM TEACHING SKILLS**, Tenth Edition, conceptualizes the effective teacher as a reflective decision maker, responsible for planning, implementing, evaluating, and making management decisions in the classroom. Each chapter considers a particular teaching skill, first discussing the theory behind it, and then presenting the reader with practice situations in which knowledge about the skill can be applied and evaluated. The Tenth Edition continues to address the importance of core InTASC standards (matched with learning objectives for each chapter), while incorporating more extensive coverage on technology, Common Core State Standards, and working with English Language Learners. In addition, new Voices from the Classroom and Case Study features help readers better understand the issues they may encounter as teachers. Designing Instructional Systems

Cambridge University Press

Educators know it's important to get students to engage in "higher-order thinking." But what does higher-order thinking actually look like? And how can K-12 classroom teachers assess it across the disciplines? Author, consultant, and former classroom teacher Susan M. Brookhart answers these questions and more in this straightforward, practical guide to assessment that can help teachers determine if students are actually displaying the kind of complex thinking that current content standards emphasize. Brookhart begins by laying out principles for assessment in general and for assessment of higher-order thinking in particular. She then defines and describes aspects of higher-order thinking according to the categories established in leading taxonomies, giving specific guidance on how to assess students in the following areas: * Analysis, evaluation, and creation * Logic and reasoning * Judgment * Problem solving * Creativity and creative thinking Examples drawn from the National Assessment of Educational Progress and from actual classroom teachers include multiple-choice items, constructed-response (essay) items, and performance assessment tasks. Readers will learn how to use formative assessment to improve student work and then use summative assessment for grading or scoring. Aimed at elementary, middle, and high school teachers in all subject areas, *How to Assess Higher-Order Thinking Skills in Your Classroom* provides essential background, sound advice, and thoughtful insight into an area of increasing importance for the success of students in the classroom--and in life.

This book has been written to provide a current, practical, Australian-based

approach to designing and developing curriculum. The demands of schools and educational systems today are such that teachers with practical curriculum skills are highly valued and this book provides a vital source for teachers who wish to build their skills in the field of curriculum design and development. The book addresses the needs of curriculum developers by examining the nature of the curriculum process and how it can be applied in schools. A particular strength is the way in which the chapters are structured around a model of curriculum development. As the model unfolds the reader is familiarised with the various elements of curriculum including situational analysis,

intent, content, learning activities and evaluation. Teachers will appreciate the value of understanding these elements and in so doing will acquire valuable skills of curriculum design and development. A feature of this book is that it addresses the issues of curriculum implementation and curriculum change. To devise a curriculum document in these times is tough enough. Those who wish to see their curricula succeed must be involved with implementing that curriculum and the curriculum change that results. This important new book is particularly appropriate to classroom teachers, system developers and student teachers studying curriculum.
