In this lively book, Benedict R. O'G. Anderson explores the cultural and political contradictions that have arisen from two critical facts in Indonesian history: that while the Indonesian nation is young, the Indonesian nation is ancient originating in the early seventeenth-century Dutch conquests; and that contemporary politics are conducted in a new language. Bahasa Indonesia, by peoples (especially the Javanese) whose cultures are rooted in medieval times. Analyzing a spectrum of examples from classical poetry to public monuments and cartoons, Anderson deepens our understanding of the interaction between modern and traditional notions of power, the mediation of power by language, and the development of national consciousness. Language and Power, now republished as part of Equinox Publishing's Classic Indonesia series, brings together eight of Anderson's most influential essays over the past two decades and is essential reading for anyone studying the Indonesian country, people or language. Benedict Anderson is one of the world's leading authorities on Southeast Asian nationalism and particularly on Indonesia. He is Professor of International Studies and Director of the Modern Indonesia Project at Cornell University, New York. His other works include *Imagined Communities: Reflections on the Origin and Spread of Nationalism* and *The Spectre of Comparisons: Nationalism, Southeast Asia, and the World*.

Contextual teaching and learning (CTL) is a system for teaching that is grounded in brain research. Brain research indicates that we learn best when we see meaning in new tasks and material, and we discover meaning when we are able to connect new information with our existing knowledge and experiences. Students learn best, according to neuroscience, when they can connect the content of academic lessons with the context of their own daily lives. Johnson discusses the elements of the brain-compatible contextual teaching and learning system: making meaningful connections; investing school work with significance; self-regulated learning; collaboration; critical and creating thinking; nurturing the individual; reaching high standards; and using authentic assessment. Drawing on the practices of teachers in kindergarten through university, Johnson provides numerous examples of how to use each part of the CTL system.

This text surveys the latest developments in teacher training and practice, and reviews the effects of policy changes. It considers the professional and personal needs of teachers, from their morale to their remuneration. The contributors subscribe to a belief in the professionalism of teachers, and examine how this professionalism might be maintained in the current climate. They propose reforms in training and measures to bridge the gap between teaching as a craft and as a profession. Other areas covered are the management of schools, in-service training, and how this relates to the sub-roles of teachers and political intervention and policy-making. The text offers Europe-wide and North American perspectives.

This book draws on five philosophers from the continental tradition – Theodor Adorno, Hannah Arendt, Gilles Deleuze, Jacques Derrida, and Jacques Rancière – in order to “think about thinking” and offer new and surprising answers to the question: How can we educate students to think creatively and critically? Despite their differences, all of these philosophers challenge the modern understanding of thinking, and offer original, radical perspectives on it. In very different ways, each rejects the modern approach to thinking, as well as the reduction of proper thought to rationality, situating thinking in sociohistorical reality and relating it to political action. Thinking, they argue, is not a natural, automatic activity, and the need to think has become all the more important as political reality seems to exhibit less thinking, or to even celebrate thoughtlessness. Bringing these continental conceptions of thinking to bear on the urgent need to educate young people to think against the current, this book makes a significant contribution to educational theory and political philosophy, one that is particularly relevant in today's anti-intellectual climate.

How Humans Learn to Think Mathematically describes the development of mathematical thinking from the young child to the sophisticated adult. Professor David Tall reveals the reasons why mathematical concepts that make sense in one context may become problematic in another. For example, a child's experience of whole number arithmetic successively affects subsequent understanding of fractions, negative numbers, algebra, and the introduction of definitions and proof. Tall's explanations for these developments are accessible to a general audience while encouraging specialists to relate their areas of expertise to the full range of mathematical thinking. The book offers a comprehensive framework for understanding mathematical growth, from practical beginnings through theoretical developments, to the continuing evolution of mathematical thinking at the highest level.

The growing interest in the history of Indonesia has made it desirable to have an English summary of the principal works of the Dutch historian Dr H. J. de Graaf, who in several books and articles published between 1935 and 1973 has given a description of the development of the Javanese kingdom of Mataram, based both on European and in digenous material. His works form a substantial contribution to the study of the national history of Indonesia. The Summary contains references to the paragraphs of the Dutch books and articles. This makes it easy for those readers who have a know ledge of Dutch to consult the original texts. The List of Sources for the study of Javanese history from 1500 to 1700 is composed of the lists in the summarized books and articles, and the Index of Names refers not only to the present Summary but also to the eight original texts. Many names of persons and localities in the Index have been provided with short explanatory notes and references to other lemmata as a quick way to give some provisional information on Javanese history.
