2046 A.D.: Seven years ago an experimental space vessel disappeared under mysterious circumstances. Now the ship has been found orbiting Neptune. When a salvage team is sent to investigate, they encounter the ultimate horror that lurks behind the Event Horizon. Paramount's major motion picture will be released in August and stars Sam Neill, Laurence Fishburne, Kathleen Quinlan, Richard T. Jones and Joely Richardson.

Event Horizon Vintage

"Brilliant continuation of Konkoly's best work to date...this series is a thriller knockout!" The critically acclaimed saga continues in the "explosive sequel!" With Boston collapsing faster than Alex Fletcher predicted, his personal rescue mission deep into the heart of an increasingly unfamiliar city reaches a critical point. Pursued by a ruthless militia group, and forced to navigate a treacherous landscape, he runs a gauntlet of grim decisions and impossible odds to reach perceived safety. Perceived because nothing is safe in the world emerging after the "event" In rural Maine, a series of lethal coincidences fuels a local militia leader's ghastly strategy to raise a private army, planting the Fletchers firmly at the intersection of his power play--and the epicenter of his rage. The human darkness released on August 19, 2019 continues to grow, threatening to tear the fabric of their fragile society apart...until nothing remains but a distant memory of the past. The Alex Fletcher Books (In Order): The Jakarta Pandemic, Book One The Perseid Collapse, Book Two Event Horizon, Book Three Point of Crisis, Book Four Dispatches, Book Five *The Event Horizon: Homo Prometheus and the Climate Catastrophe* CreateSpace

Much of our behavior is guided by our understanding of events. We perceive events when we observe the world unfolding around us, participate in events when we act on the world, simulate events that we hear or read about, and use our knowledge of events to solve problems. In this book, Gabriel A. Radvansky and Jeffrey M. Zacks provide the first integrated framework for event

cognition and attempt to synthesize the available psychological and neuroscience data surrounding it. This synthesis leads to new proposals about several traditional areas in psychology and neuroscience including perception, attention, language understanding, memory, and problem solving. Radvansky and Zacks have written this book with a diverse readership in mind. It is intended for a range of researchers working within cognitive science including psychology, neuroscience, computer science, philosophy, anthropology, and education. Readers curious about events more generally such as those working in literature, film theory, and history will also find it of interest.

Event Horizon Imperial College Press

Crossing the Event Horizon provides evidence that we are, both individually and collectively, hurtling toward an evolutionary event horizon. Using the tools of Jungian psychology, the nature of the singularity is defined by its myriad manifestations emerging from the collective unconscious. These include dreams, motifs and themes found in art, science fiction and fantasy literature and films, religious cults, and the paranormal, especially near-death experiences and UFO encounters. Key aspects of the Singularity Archetype include: "Logos Beheld" (visually comprehended linguistic intent often associated with a collective telepathic network), Homo gestalt (a new species where individuality is conserved but also telepathically networked), and a parallelism between the individual event horizon of death and eschaton (the collective event horizon of the species).

Apocalypticism is analyzed as an example of the Singularity Archetype pathologizing. A study of the Heaven's Gate saucer/suicide cult illustrates what can happen when people become possessed by the Singularity Archetype and are driven by it into delusory projections. The Singularity Archetype is viewed apocalyptically by the ego, and as a transcendent evolutionary event by the Self, and the duality of these views is explored in many examples. The evolutionary origins of the ego and its metamorphosis as it approaches the event horizon are explored. Evolutionary theory, which relates to the Singularity Archetype through a number of dynamic paradoxes, is discussed. Many popular books and movies are analyzed as permutations of the Singularity Archetype, including: Avatar, Childhood's End, Village

of the Damned, Powder, and 2001: A Space Odyssey. The Singularity Archetype is a primordial image of human evolutionary metamorphosis which emerges from the collective unconscious. How the Archetype Manifests (a Composite Picture) A rupture-of-plane event occurs, usually threatening the survival of the individual and/or species. The event is a shock that disrupts the equilibrium of body/physical world and also individual/collective psyche. It is an ontological shock that will be viewed as the worst thing possible by individual/collective ego. There is another rupture of plane that may actually be the same rupture as above but seen from a cosmic rather than a personal view. The shock is revealed to be a transcendent evolutionary event. The revelation of the transcendent aspect will often involve spiral motifs and unusual lights. Consciousness and communication metamorphose and with them core aspects---ego, individuality, connection to linear time, corporeality, gender identification, social order, etc.--- fundamentally transform. There is a vision or actualization of release from some or all limits of corporeal incarnation and the emergence of "glorified bodies," which have enhanced powers and various degrees of etherialization. More visual and telepathic modes of consciousness and communication emerge, and this is part of a transformation of individuality into "Homo gestalt"---a new species where individual psyches are networked telepathically. The Singularity Archetype may be experienced and even actualized to various degrees by an individual through transcendent and/or anomalous experiences such as near-death experiences (NDEs), UFO/abduction/close encounter experiences, kundalini and psychotropic episodes. As with encounters with all archetypes, individuals and groups attach idiosyncratic material to it, such as particular end dates and scenarios. Another way of defining the Singularity Archetype (in its collective form) is as a resonance, flowing backward through time, of an approaching Singularity at the end of human history. The Singularity Archetype relates to both the evolutionary event horizon of the species and, for the individual, the event horizon of death.

Through the Event Horizon Sphere

A sci-fi, sensual & literary collection of stories told in prose, comics, canvas & photography, themed around the lure of black holes and their unforgiving boundaries. Black holes are absolute

yet hold our imagination in their uncertainties. Places where nothing, not even light, escapes once crossed into their borders—their "event horizons". Alternatively, they are places not where things cannot escape from but where time replaces space and duality ceases. As in the case of disorienting decisions leading towards something inevitable: there is only one direction after the event horizon is crossed and it is towards a future. What arises is a tantalizing question for characters in this collection transpiring in living rooms, space stations and exoplanets: what awaits on the other side of the event horizon? *Kiss that boy * Take a court settlement and leave dignity at the door* A one-night stand with merbeings from the Andromeda Galaxy is anything but once* Star jump to the next constellation with no return ticket home, and without the girl you love* A meteorite delivers the girl of your dreams—and a funeral* Flowers that balm yesterdays, but erase a tomorrow* How far would you go to stop a fungoid Casanova with quantum mechanical hyphae from ravaging the galaxy's hearts and star maps? * Hack a pirate spaceship for an off-grid trip to the moon to smuggle out a vial of immortality* Love as a hologram.*Event Horizon is an obliterating journey towards a consequential singularity—or a rocky trip into a whole new universe. Can you live with that? Do you live? Either way, there's no turning back. Stories written by 2022 Chautauqua Janus Prize winner Stephanie Nina Pitsirilos, brought to life by an array of celebrated artists.

Dare to Lead Disney Electronic Content

With the advent of global warming and the nuclear arms race, humans are rapidly approaching a moment of truth. Technologically supreme, they manifest their dreams and nightmares in the real world through science, art, adventures and brutal wars, a paradox symbolized by a candle lighting the dark yet burning away to extinction, as discussed in this book. As these lines are being written, fires are burning on several continents, the Earth's ice sheets are melting and the oceans are rising, threatening to flood the planet's coastal zones and river valleys, where civilization arose and humans live and grow food. With the exception of birds like hawks, black kites and fire raptors, humans are the only life form utilizing fire, creating developments they can hardly control. For more than a million years, gathered around campfires during the long nights, mesmerized by the flickering life-like dance of the flames, prehistoric humans

acquired imagination, a yearning for omnipotence, premonitions of death, cravings for immortality and conceiving the supernatural. Humans live in realms of perceptions, dreams, myths and legends, in denial of critical facts, waking up for a brief moment to witness a world that is as beautiful as it is cruel. Existentialist philosophy offers a way of coping with the unthinkable. Looking into the future produces fear, an instinctive response that can obsess the human mind and create a conflict between the intuitive reptilian brain and the growing neocortex, with dire consequences. As contrasted with Stapledon's *Last and first Man*, where an advanced human species mourns the fate of the Earth, *Homo sapiens* continues to transfer every extractable molecule of carbon from the Earth to the atmosphere, the lungs of the biosphere, ensuring the demise of the planetary life support system."

Across the Event Horizon Ace

The International Bestseller On April 10, 2019, award-winning astrophysicist Heino Falcke presented the first image ever captured of a black hole at an international press conference—a turning point in astronomy that *Science* magazine called the scientific breakthrough of the year. That photo was captured with the unthinkable commitment of an intercontinental team of astronomers who transformed the world into a global telescope. While this image achieved Falcke's goal in making a black hole "visible" for the first time, he recognizes that the photo itself asks more questions for humanity than it answers. *Light in the Darkness* takes us on Falcke's extraordinary journey to the darkest corners of the universe. From the first humans looking up at the night sky to modern astrophysics, from the study of black holes to the still-unsolved mysteries of the universe, Falcke asks, in even the greatest triumphs of science, is there room for doubts, faith, and a God? A plea for curiosity and humility, *Light in the Darkness* sees one of the great minds shaping the world today as he ponders the big, pressing questions that present themselves when we look up at the stars.

Heechee Rendezvous Springer Nature

In this thought-provoking follow-up to his acclaimed *StarTalk* book, uber astrophysicist Neil deGrasse Tyson tackles the world's most important philosophical questions about the universe with wit, wisdom, and cutting-edge science. For science geeks, space and physics nerds, and all who want to understand their place in

the universe, this enlightening new book from Neil deGrasse Tyson offers a unique take on the mysteries and curiosities of the cosmos, building on rich material from his beloved *StarTalk* podcast. In these illuminating pages, illustrated with dazzling photos and revealing graphics, Tyson and co-author James Trefil, a renowned physicist and science popularizer, take on the big questions that humanity has been posing for millennia—How did life begin? What is our place in the universe? Are we alone?—and provide answers based on the most current data, observations, and theories. Populated with paradigm-shifting discoveries that help explain the building blocks of astrophysics, this relatable and entertaining book will engage and inspire readers of all ages, bring sophisticated concepts within reach, and offer a window into the complexities of the cosmos. or all who loved National Geographic's *StarTalk* with Neil deGrasse Tyson, *Cosmos: Possible Worlds*, and *Space Atlas*, this new book will take them on more journeys into the wonders of the universe and beyond.

Event horizon Random House

Stellar expedition searches for an answer to world famine.

Black Hole Survival Guide Liesel Hill

This introduction to the fascinating subject of black holes fills a significant gap in the literature which exists between popular, non-mathematical expositions and advanced textbooks at the research level. It is designed for advanced undergraduates and first year postgraduates as a useful stepping-stone to the advanced literature. The book provides an accessible introduction to the exact solutions of Einstein's vacuum field equations describing spherical and axisymmetric (rotating) black holes. The geometry and physical properties of these spacetimes are explored through the motion of particles and light. The use of different coordinate systems, maximal extensions and Penrose diagrams is explained. The association of the surface area of a black hole with its entropy is discussed and it is shown that with the introduction of quantum mechanics black holes cease to be black and can radiate. This result allows black holes to satisfy the laws of thermodynamics and thus be consistent with the rest of physics. In this new edition the problems in each chapter have been revised and solutions are provided. The text has been expanded to include new material on wormholes and clarify various other issues.

Nameless Xlibris Corporation

In a ravaged near-future England, a private detective with psychic powers might be the last hope standing between mankind and total collapse. *Mindstar Rising* is the first cyberpunk thriller in Peter F. Hamilton's hugely popular Greg Mandel series. For fans of James S.A. Corey. It's the 21st century and global warming is here to stay, so forget the way your country used to look. And get used to the free market, too – the companies possess all the best hardware, and they're calling the shots now. In a world like this, a man open to any offers can do just fine. A man like Greg Mandel for instance, who's psi-boosted, wired into the latest sensory equipment and carrying state-of-the-art weaponry. He's also been part of the English Army's Mindstar Battalion. As the cartels battle for control of a revolutionary new power source, and corporate greed outstrips national security, tension is mounting to boiling point. And Greg Mandel is about to face the ultimate test. *Mindstar Rising* is followed by *A Quantum Murder* and *The Nano Flower* to complete the Greg Mandel trilogy.

Mindstar Rising Newcon Press

"Moving and brave." —People Set against the wide open beauty of Michigan's Upper Peninsula, a wise, big hearted novel in which a young single mother and her ten-year-old daughter stand up to the trials of rural poverty and find the community they need in order to survive. Laurel Hill and her precocious daughter Skye have always been each other's everything. The pair live on Lake Superior, where the local school has classes of just four children, and the nearest hospital is a helicopter ride away. Though they live frugally, eking out a living with Laurel's patchwork of jobs, their deep love for each other feels like it can warm them even on the coldest of nights. What more do they need? One otherwise normal afternoon, their landlord decides to evict them in favor of a more profitable summer rental, and, without any warning, they are pushed farther to the margins. Suddenly it feels like the independence that has defined them is a liability. And when a dangerous incident threatens to separate them, Laurel and Skye must forever choose--will they leave the place they love and the hardscrabble life they've built to move closer to civilization, or risk everything to embrace the emptiness and wildness that has defined them? What follows is an uplifting, profoundly moving story about a mother and daughter fighting for each other, against all odds, as they learn to build community and foster the resilience that will keep them alive.

Event Horizon Penguin

"Event Horizon: A Marine's Vietnam War Story" is a memoir of Terry Presgrove's time in the United States Marine Corps: 1967-69, boot camp through returning home after the war. The book zeroes in on operation Dewey Canyon, at which time he was the artillery forward observer for Alpha Company, 1st Battalion, 9th Marine Regiment, 3rd Marine Division. Dewey Canyon was the last major engagement by the Marine Corps during the Vietnam War. This work is an attempt to give the outside observer a peek behind the veil and some pliable understanding into what a combat Marine in Vietnam experienced. The extreme psychological impact of war on the individual combatant has been portrayed as an "event horizon," a boundary in spacetime beyond which events cannot affect an outside observer. In layman's terms, it is defined as "the point of no return," i.e., the point at which the gravitational pull becomes so great as to make escape impossible. Even light cannot escape. For those who fought in the Vietnam War, and specifically for the Marines who fought in operation Dewey Canyon, it is impossible to escape the experiences that have generated a paradox of "Revolving Door" ("The Revolving Door" is the fourth chapter of *Event Horizon*) memories that will forever both haunt and inspire us. In the book's concluding chapter, under the title "Unlearned Lessons of War," America's "Revolving Door" war policies are addressed. Even though more than four decades have passed since the Vietnam War, many of the same mistakes continue to be made today. The message of this work is as relevant today as what you read on your favorite news app or see on the evening news. In the "Unlearned Lessons of War" critique, the author points out some of the self-defeating policies that have trapped our great nation. Finally, In "Appendix A," Presgrove delivers a spiritual message of hope to all the wounded and hurting folks who question their relationship with God. From our old warriors to the very young, no one is exempt from feelings of hopelessness and despair.

Beyond the Blue Event Horizon World Scientific

It is not an exaggeration to say that one of the most exciting predictions of Einstein's theory of gravitation is that there may exist "black holes": putative objects whose gravitational fields are so strong that no physical bodies or signals can break free of their pull and escape. The proof that black holes do exist, and an analysis of their properties, would have a significance going far

beyond astrophysics. Indeed, what is involved is not just the discovery of yet another even if extremely remarkable, astro physical object, but a test of the correctness of our understanding of the properties of space and time in extremely strong gravitational fields. Theoretical research into the properties of black holes, and into the possible corollaries of the hypothesis that they exist, has been carried out with special vigor since the beginning of the 1970's. In addition to those specific features of black holes that are important for the interpretation of their possible astrophysical manifestations, the theory has revealed a number of unexpected characteristics of physical interactions involving black holes. By the middle of the 1980's a fairly detailed understanding had been achieved of the properties of the black holes, their possible astrophysical manifestations, and the specifics of the various physical processes involved. Even though a completely reliable detection of a black hole had not yet been made at that time, several objects among those scrutinized by astrophysicists were considered as strong candidates to be confirmed as being black holes.

Black Hole Physics Pan Macmillan

From the author of *Jurassic Park*, *Timeline*, and *Congo* comes a psychological thriller about a group of scientists who investigate a spaceship discovered on the ocean floor. In the middle of the South Pacific, a thousand feet below the surface, a huge vessel is unearthed. Rushed to the scene is a team of American scientists who descend together into the depths to investigate the astonishing discovery. What they find defies their imaginations and mocks their attempts at logical explanation. It is a spaceship, but apparently it is undamaged by its fall from the sky. And, most startling, it appears to be at least three hundred years old, containing a terrifying and destructive force that must be controlled at all costs.

The Event Horizon Feiwel & Friends

In an age where Silicon Valley dictates what it means to innovate a painless future, knowledge and enjoyment are fertile breeding grounds of political contestation. But it's not exactly democracy. We are controlled through platforms that turn us into data for the profit of billionaires. Control has become so playful that we carry it in our pockets, as we continue to crave likes and followers. What is to be done? Should the Left continue to cling to the promise of a political Event, patiently waiting for a revolutionary

rupture where new possibilities emerge? Is there a way to delineate its horizons amidst the chaos? Through a psychoanalytic interrogation of the intersections of online culture, sexuality, and politics, Bonni Rambatan and Jacob Johanssen explore such horizons at the limits of capitalism. Event Horizon examines how capitalist ideology functions in our current moment, and, more importantly, how it breaks down. With the increasing urgency of formulating a proper Leftist response to the rapidly growing violence that seriously threatens the lives of marginalised communities, this book could not be more timely.

Event Horizon Independently Published

The Collectives are coming... With the team fractured, Interchron receives news that the collectives may have unearthed the location of their underground compound. Yet, members of the team are missing, captives, or at odds with one another. They have to figure out their strategy and fast. Maggie needs to learn new abilities and bring her team together, or the collectives will finish what they started in the canyon.

[Psychoanalysis and Digital Culture](#) Oxford University Press

The Seven Indomitable Sins and The Seven Almighty Virtues are awakening. Yhwh and Lucifer have called in their best soldiers to begin gathering them. Only the seven will be able to stand against the oncoming calamity. Who will find all seven in time? Which team will remain standing by the time the smoke clears? Wrath: Karma Strickland, a 23 year old who wants nothing more than to put the past behind her and just be normal. At least, as normal as one girl can be with killer anger issues and the ability to set things on fire with her mind. That dream is effectively pulled from her grasp when the Legendary Horseman of War shows up on her doorstep claiming she's destined to lead the Seven Indomitable Sins. Oh, and he's going to be the one to train her. War and Wrath, must be a match made in Hell. Patience: Medusa Sinclair, a small town girl from Telluride, Colorado that

favors the simple things in life. The last word she would ever use to describe herself is 'extraordinary' and most of the people in her life would agree. The Archangel Michael, however, insists that she is The Almighty Virtue of Patience and that she must have some type of magic that will assist her in leading the rest of the Virtues. Hopefully Michael's "training" methods don't break her in the process.

Black Hole Chasers John Hunt Publishing

Legends are not born; they are forged in the fires of determination and strength. Stricken by the binds of mortality, Ron embarks on his last great expedition. A university professor is drawn to unearth the mysteries of what lies beneath to uncover the ill-fated destiny of the planet. Gelomdor, the creature sent to consume and devour all living things has been awoken. Plagues swept across the lands, and legions of the undead are at the wake as the World Eater begins to rise from the ashes. Extracted by members of what's left of the US Military, they embark to find a means to end the reign of tyranny of the Demon Dragon. By the bending of Space Time, the doorway to Angora opens, and the changing of the written pages of fate begins.

Event Horizon Jonathan Zap

#1 NEW YORK TIMES BESTSELLER • Brené Brown has taught us what it means to dare greatly, rise strong, and brave the wilderness. Now, based on new research conducted with leaders, change makers, and culture shifters, she's showing us how to put those ideas into practice so we can step up and lead. Don't miss the five-part Max docuseries Brené Brown: Atlas of the Heart! ONE OF BLOOMBERG'S BEST BOOKS OF THE YEAR Leadership is not about titles, status, and wielding power. A leader is anyone who takes responsibility for recognizing the potential in people and ideas, and has the courage to develop that potential. When we dare to lead, we don't pretend to have the right answers; we

stay curious and ask the right questions. We don't see power as finite and hoard it; we know that power becomes infinite when we share it with others. We don't avoid difficult conversations and situations; we lean into vulnerability when it's necessary to do good work. But daring leadership in a culture defined by scarcity, fear, and uncertainty requires skill-building around traits that are deeply and uniquely human. The irony is that we're choosing not to invest in developing the hearts and minds of leaders at the exact same time as we're scrambling to figure out what we have to offer that machines and AI can't do better and faster. What can we do better? Empathy, connection, and courage, to start. Four-time #1 New York Times bestselling author Brené Brown has spent the past two decades studying the emotions and experiences that give meaning to our lives, and the past seven years working with transformative leaders and teams spanning the globe. She found that leaders in organizations ranging from small entrepreneurial startups and family-owned businesses to nonprofits, civic organizations, and Fortune 50 companies all ask the same question: How do you cultivate braver, more daring leaders, and how do you embed the value of courage in your culture? In *Dare to Lead*, Brown uses research, stories, and examples to answer these questions in the no-BS style that millions of readers have come to expect and love. Brown writes, "One of the most important findings of my career is that daring leadership is a collection of four skill sets that are 100 percent teachable, observable, and measurable. It's learning and unlearning that requires brave work, tough conversations, and showing up with your whole heart. Easy? No. Because choosing courage over comfort is not always our default. Worth it? Always. We want to be brave with our lives and our work. It's why we're here." Whether you've read *Daring Greatly* and *Rising Strong* or you're new to Brené Brown's work, this book is for anyone who wants to step up and into brave leadership.
