Engineering Heat And Mass Transfer Covers the complete discipline of heat and mass transfer in relation to engineering thermodynamics and fluid mechanics. Publishes results

from basic research as well as engineering applications such as heat exchangers, process and chemical engineering. Covers experimental techniques as well as analytical and computational approaches. Heat and Mass Transfer Heat and mass transfer is an important and consolidated branch of physics and engineering. Our research aims to extend the traditional experimental and numerical analysis into the so-called mesoscale, i.e. to understand the specific phenomena occurring at the fluid interfaces in a sub-micron scale. In thermal science, heat transfer is the passage of thermal energy from a hot to a cold body. When a physical body, e.g. an object or fluid, is at a different temperature than its surroundings or another body, transfer of thermal energy, also known as heat transfer, occurs in such a way that the body and the surroundings reach thermal equilibrium.

The second heat transfer process is convection, or heat transfer due to a flowing fluid. The fluid can be a gas or a liquid; both have applications in aerospace technology. In convection heat transfer, the heat is moved through bulk transfer of a non-uniform temperature fluid.
