Management by objectives (MBO) is defined and the planning, organization, and functions of police patrol are considered from this approach. The text is directed at police administrators. MBO means defining objectives and goals of an organization, and then allocating resources according to the defined objectives. It implies the complete understanding of the objectives by all members of the organization and the development of a path between the organization and personnel toward achieving the defined objectives. Use of the MBO approach would require provision of subgoals for organizational components, implementation of programs directed at achieving goals, and the ability to modify the goals if necessary. A MBO model for police departments is presented and instructions and guides are provided for charting goals and objectives. The area of leadership and interpersonal relationships in a police department is examined since the MBO approach would require a nontraditional leadership style, organization-wide input into planning, and increased delegation of authority. The major components of patrol operations are examined from the MBO perspective: planning; techniques; organization; special operations; team policing; scientific method (i.e., measuring productivity); manpower distribution, command and control; and reporting, records, and information. Crime prevention is defined and the role of the community in effecting crime control is considered. Charts and illustrations provided in the text outline patrol and patrol management techniques. The final chapter discusses social and economic change that is influencing police administration. Change strategy is considered, and the section presents change models used in Los Angeles, Calif., and Dallas, Tex. Future directions for police-patrol administration are predicted. The appendixes contain management-planning outlines for establishing a new unit within a department (e.g., a prevention unit) and for implementing a community involvement program. Bibliographical references are provided at the end of sections and an index is included.

Built on a foundation of nearly 1,200 references, *Leadership and Management in Police Organizations* is a highly readable text that shows how organizational theory and behavior can be applied to improve the operations, leadership, and management of law enforcement. Author Matthew J. Giblin emphasizes leadership and management as separate skills in successful police supervisors and executives, illustrating to students how the two skills combine to improve individual and organizational efficacy in policing. Readers will come away with a stronger understanding of why organizational decisions matter and the impact research can have on police departments.

For courses in Police Patrol Operations, Community Policing, Problem-Oriented Policing, and Introduction to Law Enforcement in both police academies and colleges. This global, yet concise, text presents a view of uniformed police patrol operations from the standpoint of law enforcement services provided in the field. It focuses on the importance of professionalism, leadership, ethics, and effective communications in a proactive community, while also looking at critical issues and problems facing police officers today. Heavy emphasis is placed on the police mission and the requirements for police officers in a contemporary, democratic society. The author has been a law enforcement and public safety practitioner, researcher, and educator for over 20 years.

Mastery of Police Patrol Pearson Education

This handbook, used as a course outline in a workshop for police managers, provides an overview of current research in patrol management and methods which can be used to improve patrol activities. Charts, graphs, tables, and background papers illustrate the material presented during each session of a 2.5 day workshop and provide additional information. Following an overview of the problems of managing a patrol operation, the sessions cover the role of a patrol manager, resource allocations,

policy problems, use of crime data in planning patrol operations, various types of crime analysis, patrol strategies (both general activities and specialized patrols), and the role of patrol management as part of total community service. A literature review is included. Tables list computer software programs available for patrol management. Lists of patrol priority guidelines are given for several police departments. Descriptions of specific city programs are given. Worksheets to be used during the workshop sessions are included. The costs of wasted patrol time are given for several cities. Advantages and disadvantages of several patrol strategies are given in chart form.

Selected analytic techniques and management strategies of a field test program to improve the utilization of police patrol resources are detailed. This program test design forms the basis for the field test, sponsored by the National Institute of Law Enforcement and Criminal Justice (NILECJ). The goal of each field test effort is to determine the effectiveness of the elements or program strategies outlined in the document in various settings and to examine their applicability to other jurisdictions. A number of police departments have already experimented with one or more of the elements of the patrol management program. From this previous experimentation, NILECJ has created a composite of the best approaches in the field, which are to be implemented in three police departments in cities with populations ranging from 200,000 to 450,000. The primary objectives are to assess the impact of this configuration of techniques and strategies on patrol efficiency and to determine whether the program merits widespread replication. Traditional patrol allocation strategies are reviewed and evaluated. Then a program design is outlined, with techniques and strategy options for the program's two major processes: allocating resources (matching resource allocations to workload conditions) and undertaking directed activity (analyzing crime and service-oriented problems and developing strategies to solve those problems). An evaluation design is presented for use in determining the degree to which the test program achieved its objectives and in identifying conditions which inhibit or facilitate its successful implementation. The criteria used by NILECJ in selecting suitable test sites are briefly outlined, and a selected bibliography is provided.

The updated fourth edition of *Introduction to Security: Operations and Management* provides a single, comprehensive text that balances introductory protection concepts with security management principles and practices. It presents a global view of security along with the practical application of security principles. Unmatched coverage of management topics such as planning, budgeting, and dealing with decision-makers make this an outstanding text for security management courses. The accessible and concise writing style makes it a top choice for students, while Ortmeier's focus on career preparation makes this edition an excellent prep tool for the ASIS International Certified Protection Professional (CPP) exam.

Police Operations: Theory and Practice Butterworth-Heinemann

To make an initial assessment of this volume I decided first to review the chapters that related directly to management assignments I had held in the past eleven years as a police officer in a management position. After reading four chapters (Basic Line Functions, Patrol Operations, Administrative/Staff Functions, and Training Policies), I was surprised and impressed with both the material and the approach of the authors. This book has now replaced O.W. Wilson's *Police Administration*, as my favorite police management text.

Operations and Management Prentice Hall

This trusted book provides a focused, practical introduction to the key principles and practices guiding the operations of modern police departments. While maintaining its proven instructional approach and strong focus on community- and problem-oriented policing, the sixth edition of *POLICE OPERATIONS: THEORY AND PRACTICE* reflects the latest trends and research shaping the day-to-day operations of progressive police departments. A new Perspectives from a First-Line Supervisor feature shares practical, applied information. Highlights include new and revised information on

evolving technology, the police officer hiring process, how police use websites and social media to communicate with the public, patrol techniques, cultural diversity, cell phone use and laws, hazardous materials response, federal emergency response agencies, and cyberterrorism. The authors complement this wealth of information with an appealing writing style, numerous photos and illustrations, and real-life examples to engage your interest, enhance learning, and demonstrate the professional relevance of chapter material. Now better than ever, this convenient book is an ideal resource for law enforcement students and professionals who want an accessible, up-to-date guide to essential principles and current trends and practices in police operations. Police Manpower Management Cengage Learning

This book provides the "how to's" of police patrol, focusing on how officers on the front line perform their duties (covering both skills and techniques), meet day-to-day challenges, and manage the tasks and risks associated with modern police patrol. Drawing on theory, research, and the experience of numerous practitioners, it provides practical daily checklists and guidance for delivering primary police services: • Conducting mobile and foot patrols • Completing a preliminary investigation • Canvassing a neighborhood • Developing street contacts • Building and sustaining trust • Delivering death notifications, and more. It features interviews with frontline officers, as well as both police chiefs and supervisors to examine the role of police officers in the 21st century and their partnership with, and accountability to, the communities they serve. In addition, this book explores how modern policing has evolved by examining the research, innovation, tradition, and technology upon which it is based. It provides new perspectives and ideas as well as basic knowledge of daily practices, offering value to new and experienced police and security personnel alike; students in criminal justice, law and public safety; community leaders; and others involved in advancing police operations and community well-being.

The role played by effective communications in the Integrated Criminal Apprehension Program (ICAP) is discussed, with attention to the implementation and functions of the ICAP communications process. ICAP is a police service delivery concept that focuses on building a structured approach to the management of police services. To resolve the dilemma of police priorities and proper utilization of resources, the ICAP concept introduces a structured, systematic approach to the planning, development, and integration of police functions and services, especially as concerns police patrol. ICAP stresses the use of a decision model in everyday police operations, and because such a model depends on the systematic collection and analysis of information, the need for effective communication is paramount. This manual addresses the communications aspects of ICAP, specifically the role of communication in managing patrol operations. An overview of traditional versus existing perspectives on managing patrol operations is provided, along with a description of the ICAP implementation process and the resulting department-wide effects, especially those accruing to the communications process. The various concepts and methods that can be implemented as part of the overall department effort to manage the demand for patrol service are detailed, as are the policy, system, and personnel development considerations necessary to implement the ICAP communications process. The use of a pre-implementation pilot test and evaluation is also discussed. Samples of local police policy directives regarding the management of calls-for-service for police departments in Kansas City and Springfield, Mo., and Wilmington, Del., are appended. Graphic and tabular data are provided.

The Role of Crime Forecasting in Law Enforcement Operations Cambridge University Press

This collection of papers examines issues and problems in policing of municipal police, sheriffs' departments, and private security agencies. Topics include police women, collective bargaining, and management. A survey of the needs, problems, priorities, and values of selected chiefs of police throughout the United States is reported; results indicate that many chiefs are aware of organizational and operational shortcomings of their departments, respond to the findings of published research, and recognize that improvements must be made for more efficient policing. The historical processes of police management are summarized, and the meaning and importance of valid and reliable police performance data for police management are discussed. Legal issues affecting law enforcement are considered; it is concluded that law is a social force at both the national and local level, which affects the nature and future of policing. The use of preventive patrol to deter crime is considered to have little effect on citizen fear or arrest rates. Continuation of police patrol should be conducted according to defined, specific needs and problems. A female officer discusses the future of women in policing, predicting that as much as 50 percent of the police force could be female in the future. Police collective bargaining and the future development of police unions are examined. The roles of the sheriff and private security are explored in relation to police work. Better licensing, selection, training, and registration are recommended for private security forces. The concluding chapter considers the future of police improvement. It is suggested that innovative police tactics are inefficient unless accompanied by specific and stated objectives.

Leadership and Management in Police Organizations National Academies Press

"Decision making in the police environment must take advantage of the latest advances in business and military management, but at the same time remain aware of the challenges associated with maintaining and restoring order on a day-to-day basis. The framework proposed in this book has been elaborated from the diverse experiences of the authors as managers, police officers and crime analysts; and shows how to effectively use intelligence for making decisions, which rules to respect when deploying resources and how to assess and monitor the impact of measures taken."-- Publisher.

This report discusses resource allocation issues that affect patrol operations and demonstrates some of the mechanisms available for resolving them. The authors suggest that managers use the report to select the method most suited to their department's situation. Specifically, the report focuses on calculating the number of patrol officers needed to satisfy departmental service-delivery objectives and distributing those personnel across shifts and geographic boundaries. The report's five chapters are organized to guide the reader through the processes involved in patrol planning, from issue

development through the resolution of single and multiple issues and modification of the patrol plan. Also addressed are the concept and benefits of patrol planning, fundamentals of analyzing a patrol plan, analytical techniques, and key planning steps for resolving resource allocation issues. Exhibits and tables are included. Additional sources of information are appended.

MANAGEMENT AND SUPERVISION IN LAW ENFORCEMENT is a practical and straightforward book that focuses on law enforcement managers and supervisors, their jobs, and the complicated interrelationships between members of the law enforcement team and the communities they serve. The seventh edition has an increased emphasis on leadership and has been reorganized to begin with a general overview of the policing profession, thereby providing context for later discussions of the role of managers within the field. The text focuses on post-9/11 policing and includes research on the effects of 9/11 as well as discussion of data-driven policing (including CompStat policing), intelligence-led policing, evidence-based policing, and predictive policing. A new Ethical Dilemma boxed feature challenges students to think critically about the gray moral issues faced by supervisors every day. MANAGEMENT AND SUPERVISION IN LAW ENFORCEMENT, 7th Edition, presents a comprehensive overview of the responsibilities of law enforcement leaders, covering relevant topics ranging from the newest principles in policing to the exciting technological aids changing the face of law enforcement today--preparing readers to become tomorrow's leaders. What does police violence against minorities, or violent clashes between minorities and the police tell us about citizenship and its internal hierarchies? Indicative of deep-seated tensions and negative perceptions; incidents such as these suggest how minorities are vulnerable, suffer from or are subject to police abuse and neglect in Israel. Marked by skin colour, negatively stigmatized or rendered security threats, their encounters with police provide a daily reminder of their defunct citizenship. Taking as case studies the experiences and perceptions of four minority groups within Israel including Palestinian/Arab citizens, ultra-Orthodox Jews and Ethiopian and Russian immigrants, Ben-Porat and Yuval are able to explore different paths of citizenship and the stratification of the citizenship regime through relations with and perceptions of the police in Israel. Touching on issues such as racial profiling, police brutality and neighbourhood neglect, their study questions the notions of citizenship and belonging, shedding light on minority relationships with the state and its institutions.

Management of Patrol Operations and Personnel SAGE Publications

In 1975, Rand made available two computer programs for analyzing deployment of police patrol cars: the Patrol Car Allocation Model (PCAM) and the Hypercube Model. PCAM is used primarily to determine the total number of patrol cars a department needs and how they should be allocated over days of the week, hours of the day, and geography. The Hypercube Model is used primarily for designing patrol beats (the areas covered by one car). Both of these models were specifically designed to serve the needs of local police agencies with little or no outside technical assistance. The documentation for each includes a nontechnical executive summary that explains the kinds of applications for which the model is suitable, a user's manual that describes step-by-step how to operate the computer program once it is installed on a computer system, and a program description that provides information for data-processing personnel to install the model, construct a data base, and modify the model if needed. When the models were new, the designers undertook several field tests in which they worked closely with police agencies to refine both the models and the methods of applying them. However, after publication of the documentation in 1975, Rand assistance to users has been limited. The designers have provided copies of the computer programs, fixed a few errors in the programs, responded to user inquiries, and provided advice to organizations that included the models in their training program.

History of Use 1975-1979 Police Patrol Operations and Management

Proactive policing, as a strategic approach used by police agencies to prevent crime, is a relatively new phenomenon in the United States. It developed from a crisis in confidence in policing that began to emerge in the 1960s because of social unrest, rising crime rates, and growing skepticism regarding the effectiveness of standard approaches to policing. In response, beginning in the 1980s and 1990s, innovative police practices and policies that took a more proactive approach began to develop. This report uses the term "proactive policing" to refer to all policing strategies that have as one of their goals the prevention or reduction of crime and disorder and that are not reactive in terms of focusing primarily on uncovering ongoing crime or on investigating or responding to crimes once they have occurred. Proactive policing is distinguished from the everyday decisions of police officers to be proactive in specific situations and instead refers to a strategic decision by police agencies to use proactive police responses in a programmatic way to reduce crime. Today, proactive policing strategies are used widely in the United States. They are not isolated programs used by a select group of agencies but rather a set of ideas that have spread across the landscape of policing. Proactive Policing reviews the evidence and discusses the data and methodological gaps on: (1) the effects of different forms of proactive policing on crime; (2) whether they are applied in a discriminatory manner; (3) whether they are being used in a legal fashion; and (4) community reaction. This report offers a comprehensive evaluation of proactive policing that includes not only its crime prevention impacts but also its broader implications for justice and U.S. communities.
