Computer network - Wikipedia A server is a computer that controls access to the hardware, software and other resources on the network and provides a centralized storage area for program. A client is a computer that request services from a server computer. Peer-to-peer is a simple, inexpensive network that Peer-to-Peer typically connects fewer than 10 computers. BASIC CONCEPTS OF COMPUTER NETWORKS In computer networks, a network element is a manageable logical entity uniting one or more physical devices. This allows distributed devices to be managed in a unified way using one management system. Network element - Wikipedia Computer network components are the major parts which are needed to install the software. Some important network components are NIC, switch, cable, hub, router, and modem. Depending on the type of network that we need to install, some network components can also be removed. For example, the wireless network does not require a cable.
