This book takes a fresh look at programs for advanced studies for high school students in the United States, with a particular focus on the Advanced Placement and the International Baccalaureate programs, and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs, this report provides teachers,

parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.

The purpose of this study is to trace the development of high-school curricula in the North Central states from 1860 to 1900. A brief introduction furnishes a background for the geographical area indicated. Part I contains a treatment of subjects and their organization into curricula. Part II deals with the subject matter of the various fields and subjects. Part III addresses subjects and subject matter in greater depth. For purposes of tabulation, the period 1860-1900 has been divided into eight units of five years each, to determine as accurately as possible the dates at which significant changes took place. In the treatment of subjects, organization of curricula and subject matter, the facts are presented as revealed by the sources consulted. No

attempt has been made to give connected accounts of particular schools. Peculiarities of individual schools have been noted but conclusions deal with general practices and tendencies.
