 Ideally suited to upper-undergraduate and graduate students, *Analyzing the Global Political Economy* critically assesses the convergence between IPE, comparative political economy, and economics. Andrew Walter and Gautam Sen show that a careful engagement with economics is essential for understanding both contemporary IPE and for analyzing the global political economy. The authors also argue that the deployment of more advanced economic theories should not detract from the continuing importance for IPE of key concepts from political science and international relations. IPE students with little or no background in economics

will therefore find this book useful, and economics students interested in political economy will be alerted to the comparative strengths of political science and other social science disciplines. A concise look at the foundations of analysis in the political economy of global trade, money, finance, and investment Suitable for upper-undergraduate and graduate students with some or no economic background Techniques and findings from a range of academic disciplines, including international relations, political science, economics, sociology, and history Further reading and useful weblinks including a range of relevant data sources, listed in each chapter

 Student Unit Guides are perfect for revision. Each guide is written by an examiner and explains the unit

requirements, summarises the relevant unit content and includes a series of specimen questions and answers. A Content Guidance section combines an overview of the specific unit or module and the key terms and concepts, with an examiner's interpretation so that students understand precisely what they need to understand and learn, the skills required and the potential pitfalls. A Question and Answer section provides graded answers, typically A and C, to questions which have been set to reflect the style of the unit. All responses are accompanied by commentaries which highlight their respective strengths and weaknesses, giving students an insight into the mind of the examiner.

□□

Experimental methods in economics respond to circumstances that are not completely dictated by accepted theory or outstanding problems. While the field of economics makes sharp distinctions and produces precise theory, the work of experimental economics sometimes appear blurred and may produce results that vary from strong support to little or partial support of the relevant theory. At a recent conference, a question was asked about where experimental methods might be more useful than field methods. Although many cannot be answered by experimental methods, there are questions that can only be answered by experiments. Much of the progress of experimental methods involves the posing of old or new questions in a way that experimental methods can be applied. The title of the book reflects the spirit of adventure that experimentalists share and focuses on experiments in general rather than forcing an organization into traditional categories that do not fit. The

emphasis reflects the fact that the results do not necessarily demonstrate a consistent theme, but instead reflect bits and pieces of progress as opportunities to pose questions become recognized. This book is a result of an invitation sent from the editors to a broad range of experimenters asking them to write brief notes describing specific experimental results. The challenge was to produce pictures and tables that were self-contained so the reader could understand quickly the essential nature of the experiments and the results.

This revision of Bloom's taxonomy is designed to help teachers understand and implement standards-based curriculums. Cognitive psychologists, curriculum specialists, teacher educators, and researchers have developed a two-dimensional framework, focusing on knowledge and cognitive processes. In combination, these two define what students are expected to learn in school. It explores curriculums from three unique perspectives-cognitive psychologists (learning emphasis), curriculum specialists and teacher educators (C & I emphasis), and measurement and assessment experts (assessment emphasis). This revisited framework allows you to connect learning in all areas of curriculum. Educators, or others interested in educational psychology or educational methods for grades K-12.

The bantustans - or 'homelands' - were created by South Africa's apartheid regime as ethnically-defined territories for Africans. Granted self-governing and 'independent' status by Pretoria, they aimed to deflect the demands for full political representation by black South Africans and were shunned by the anti-apartheid movement. In 1972, Steve Biko wrote that 'politically, the bantustans are the greatest single fraud ever invented by white politicians'. With the end of apartheid and the first democratic elections of 1994, the bantustans formally ceased to exist, but their legacies remain inscribed in South Africa's contemporary social, cultural, political, and economic landscape. While the older literature on the bantustans has tended to focus on their repressive role and political illegitimacy, this edited volume offers new approaches to the histories and afterlives of the former bantustans in South Africa by a new generation of scholars. This book was originally published as various special

issues of the South African Historical Journal.

In July 1815, six Iranian students arrived in London under the escort of their chaperone, Captain Joseph D'Arcy. Their mission was to master the modern sciences behind the rapid rise of Europe. Over the next four years, they lived both the low life and high life of Regency London, from being down and out after their abandonment by D'Arcy to charming their way into society and landing on the gossip pages. *The Love of Strangers* tells the story of their search for love and learning in Jane Austen's England. Drawing on the Persian diary of the student Mirza Salih and the letters of his companions, Nile Green vividly describes how these adaptable Muslim migrants learned to enjoy the opera and take the waters at Bath. But there was more than frivolity to their student years in London. Burdened with acquiring the technology to defend Iran against Russia, they talked their way into the observatories, hospitals, and steam-powered factories that placed England at the forefront of the scientific revolution. All the while, Salih dreamed of becoming the first Muslim to study at Oxford. *The Love of Strangers* chronicles the frustration and fellowship of six young men abroad to open a unique window onto the transformative encounter between an Evangelical England and an Islamic Iran at the dawn of the modern age. This is that rarest of books about the Middle East and the West: a story of friendships.

David Crystal's classic English as a Global Language considers the history, present status and future of the English language, focusing on its role as the leading international language. English has been deemed the most 'successful' language ever, with 1500 million speakers internationally, presenting a difficult task to those who wish to investigate it in its entirety. However, Crystal explores the subject in a measured but engaging way, always backing up observations with facts and figures. Written in a detailed and fascinating manner, this is a book written by an expert both for specialists in the subject and for general readers interested in the English language.

An analysis of how economic theories can be used to understand disordered and

pathological gambling that calls on empirical evidence about behavior and the brain and argues that addictive gambling is the basic form of all addiction. The explanatory power of economic theory is tested by the phenomenon of irrational consumption, examples of which include such addictive behaviors as disordered and pathological gambling. *Midbrain Mutiny* examines different economic models of disordered gambling, using the frameworks of neuroeconomics (which analyzes decision making in the brain) and picoeconomics (which analyzes patterns of consumption behavior), and drawing on empirical evidence about behavior and the brain. The book describes addiction in neuroeconomic terms as chronic disruption of the balance between the midbrain dopamine system and the prefrontal and frontal serotonergic system, and reviews recent evidence from trials testing the effectiveness of antiaddiction drugs. The authors argue that the best way to understand disordered and addictive gambling is with a hybrid picoeconomic-neuroeconomic model.
