Shaping a New Health Care System Elsevier Health Sciences
In Part One we introduce the reader to chronic illness, the U.S. health care system's approach to chronic illness, and the need for the system's major reform. We also provide a conceptual model of the experiences of the chronically ill. In Chapter One we briefly introduce our perspective on the implications of chronic illness for the U.S. health care system. In Chapter Two we address the prevalence and complex nature of chronic illness, and in Chapter Three we summarize some of the major responses of the health care system to the increase in chronic illness. We discuss the weaknesses of the conventional acute care approach to chronic

illness in Chapter Four, noting the various criticisms that have been made of it and the critics' suggestions for how long-term illness and disabilities could be managed. We also point out how we agree and disagree with the critics. In Part Two we illustrate how the ill and their marital partners experience chronic illness and its management. These experiences have implications for health care policy, some of which are pointed out in the accompanying commentaries. Chapter Five is central to this book, for in it we offer our new theoretical framework for dealing with chronic illness and its increasing influence on the U.S. health care system and policies. In Chapters Six through Nine we describe four distinctly different stages of chronic illness: comeback phases, stable phases, unstable phases, and deterioration. In each chapter we present case illustrations and commentaries on relevant policy. In Part Three we summarize the

implications for health care practice and policy that can be derived from the case illustrations provided in Part Two. In Chapter Ten we detail some of the possible effects on health care practitioners of adopting our framework. And in Chapter Eleven we summarize our conceptual model and present some of the major policy implications of our perspective.

Developing Holistic Care for Long-term Conditions focuses on how to help people with long-term health conditions cope more effectively. It brings together physical and mental health, offering a holistic approach for students and practitioners in a variety of care settings. Comprising four sections, this text introduces the policy and background to caring for people with chronic illness as well as the psychosocial impact of long-term conditions. Essential skills for practice are explored including holistic assessment, symptom control and the promotion of effective partnership between client and carer in supporting coping, recovery and end of life care. There is an emphasis on maximising individual health potential and resilience with the role of nutrition, exercise, complementary therapy and spirituality considered. The focus is on client centred care which addresses the whole person, mind and body. The extensive final section presents examples of key health issues where UK national guidelines have been published

including: Long-term neurological conditions Diabetes Mental health Cancer Coronary heart disease Older people This evidence-based book takes note of the relevant National Service Frameworks and offers an informative and pragmatic guide for all those learning about caring for the chronically ill, as well as providing a useful reference work for qualified nurses and allied health professionals.

A trusted person-centred resource to start you on the path to professional success *Fundamentals of Nursing and Midwifery* is a popular foundational nursing text specifically developed for Australian and New Zealand students. This comprehensive resource provides a detailed overview of key information with person-centred care highlighted throughout to focus on the individualistic, interactive and holistic nature of nursing and midwifery practice. It uses accessible language that introduces students to the 'why' as well as the 'how' of nursing and midwifery. It focuses not only on a person's physical healthcare needs, but also on the intellectual, emotional, sociocultural and spiritual aspects of care. In this way, students learn to be holistic health care professionals while acquiring the foundational knowledge, procedures and skills required for successful nursing or midwifery practice.

Lubkin's *Chronic Illness*, Ninth Edition is an essential text for nursing students who seek to understand the various aspects of chronic illness affecting both patients and families. This is the only text of its kind that truly addresses not only the physical

aspects but the important psychosocial issues that individuals and families deal with on a daily basis. The text takes an application to practice-based approach by covering impact/issues, interventions and outcomes. The Ninth Edition has been heavily revised to include updated and expanded content on the illness experience, health policy, uncertainty and the advanced practice nurse in chronic illness. Each chapter employs a theoretical approach to the concept followed by the impact or issues of the concept, nursing interventions and potential outcomes. Two new chapters focused on Loss and Spirituality have also been included. New to the Ninth Edition: Expanded personal and real-life comments from the perspective of the caregiver

Gain the nursing skills you need to provide wellness-based care for older adults! Ebersole and Hess' *Gerontological Nursing & Healthy Aging*, 6th Edition uses a holistic approach to describe compassionate care along a continuum of wellness. Designed to promote healthy aging regardless of the patient's situation or disorder, this text provides best-practice guidelines in covering physical, psychosocial, spiritual, and cognitive health. New to this edition are Next Generation NCLEX®-style case studies, updates on measuring clinical judgment, expanded coverage of core competencies, and more. Written by gerontological nursing experts Theris Touhy and Kathleen Jett, this concise text provides a solid foundation in every aspect of healthy aging. Focus on health and wellness provides the evidence-based information and strategies needed to promote healthy aging. Key concepts,

learning activities, and discussion questions in every chapter emphasize the information needed to enhance care. Recommended competencies from the AACN and the Hartford Institute for Geriatric Nursing are integrated throughout. Discussion of disease processes is placed in the context of healthy adaptation, nursing support, and responsibilities. Easy-to-use information on nursing techniques and communication appears with the associated disorders, symptoms, and situations. Tips for Best Practice and Resources for Best Practice boxes provide insight into proven methods of nursing care. Discussions of nursing and interprofessional actions help students learn to enhance wellness, maintain optimal function, and prevent unnecessary disability. Coverage of age, cultural, racial, and gender differences highlights these important considerations in caring for older adults. NEW! Updates reflect the NCSBN Clinical Judgment Model. NEW! Next Generation NCLEX® (NGN)-style case studies provide optimal preparation for the Next Generation NCLEX Examination. NEW! Specialized information addresses the unique needs of older adults such as atypical disease presentation, geriatric syndromes, neurocognitive disorders, quality of life with chronic illness, legal and ethical issues, and mental health challenges such as depression and substance abuse. NEW! Coverage of competencies of expanding nursing roles in the care of older adults addresses the continuum of care. NEW! Gerontological expertise is incorporated into nursing actions and complements other nursing texts (including med-surg, community health, mental health, and assessment books) used in programs without a freestanding gerontological nursing course. NEW! Expanded content includes information on COPD

guidelines, medication use and misuse, Alzheimer's Disease, wound care guidelines, diagnosis and treatment of sleep-disordered breathing, joint replacement, caregiver strain, hospice and transitional care, and more.

This publication, initiated by the Korean Society of Medical Informatics (KOSMI) and its Nursing Informatics Specialist Group, and the Special Interest Group in Nursing Informatics of the International Medical Informatics Association (IMIA-NI), is published for nurses and informatics experts working with informatics applications in nursing care, administration, research and education, bringing together the worlds of nursing informatics community. Korea is well known for having the highest level of Information and Communication Technology (ICT) accessibility in the world. Advances in ICT in Korea have lead Korean health care sectors to fully utilize the benefit of ICT for health care. The theme of the book, 'Consumer-Centered Computer-Supported Care for Healthy People', emphasizes the central role of the consumer and the function of information technology in health care. It reflects the major challenge in our time, which is developing and using information technology for the improvement of consumer oriented health care. "I would seriously recommend that this book - in text form - should be available in all nursing libraries as a resource for study and reference in the expanding area of nursing and health care."-- Paula M. Procter, Reader in Informatics and Telematics in Nursing, The University of Sheffield, United Kingdom.

Developing Grounded Theory: The Second Generation Revisited is a highly accessible description of the rapid development of grounded theories and the latest developments in grounded theory methods. A succinct overview of the development of grounded theory is provided, including the similarities and differences between Glaserian and Straussian grounded theory. The method introduced by Schatzman, and the development of Charmaz's constructivist grounded theory and Clarke's situational analysis, are clearly presented. The book is divided into seven sections: each type of grounded theory is discussed by the developer (or their student), followed by a chapter describing a project that used that particular type of grounded theory. Bookending these chapters is the first chapter, which describes the development and landscape of grounded theory, and a final chapter describing the challenges to the future of grounded theory. This book is ideally suited for beginning students trying to come to grips with the field as well as more advanced researchers attempting to delineate the major types of grounded theory.

Module on Preventive Strategies for Non-Communicable Diseases for Nursing and Allied Health Science is of interest not only to the nursing fraternity but for the entire health professionals as we all are associated with each other in one way or another. The content relates to present data and the preventive strategies of different NCDs, which health personnel should know. The primary objective of this book is to throw light on the preventive strategies of some major non-communicable diseases, such as cardiovascular diseases, cancers, diabetes, chronic respiratory disorders, Alzheimer's diseases and osteoporosis. These are all challenges for our country. Special efforts have been taken to enhance the richness of the material by including current statistical information on each of these diseases. This would not only provide insight into the actual burden imposed by these diseases but also into the anticipated burden if proper measures are not taken to check the ever-increasing morbidity.
