 This book originated in a symposium on business ethics that took place in the Faculty of Commerce at the University of Canterbury in September of 1997. Professor Werhane, who was a visiting Erskine Fellow, provided the keynote address, and many of the papers in this collection were originally presented at this symposium. We are grateful to Kluwer Publishers for the opportunity to publish these essays in their series on International Business Ethics. We want to thank the Olsson Center for Applied Ethics at the Darden School, University of Virginia, and the Erskine Trust and the Department of Management at the University of Canterbury for their support of Professor Werhane's fellowship, research for this text, and funding for its production. We especially want to thank Lisa Spiro,

who copy-edited and prepared the manuscript for publication.
 INTRODUCTION AND OVERVIEW This book originated in a symposium on business ethics that took place in the faculty of commerce, at the University of Canterbury, in September 1997. Professor Werhane, who was a visiting Erskine Fellow, provided the keynote address. Contributions to the proceedings were inter-disciplinary, spanning theory and practice. Subsequent contributions were obtained from within New Zealand and from Asia. The book starts off on rather a pessimistic note: the new managerialism (the kind of thing Scott Adams jokes about in the world-famous Dilbert cartoons) is economically suspect and psychologically damaging.

The condition of banking systems in developing countries strongly influences the design and effectiveness of economic adjustment policies. Bank portfolio weakness can limit the flexibility of interest rate policy, the scope of financial reforms, and the conduct of monetary and fiscal policy. This volume, edited by V. Sundararajan and Tomás J.T. Baliño, is a collection of papers by IMF economists. It examines the link between financial problems and macroeconomic policy and highlights the need for prudential regulations and the appropriate institutional framework to deal with problem banks and borrowers.

This book brings together scholars from different disciplines to examine the evolving patterns of economic organisation across Northeast and Southeast Asia against the backdrop of market liberalisation, political changes and periodic economic crises since the 1990s. More specifically, it provides an interdisciplinary account of variations, continuities and changes in the institutional structures that shape business systems and practices and govern innovation patterns, together with analyses of their impact on established systems of economic coordination and control. In line with this analytical focus, the project has three different yet interrelated objectives. In the first place, building on the comparative business systems framework, it elucidates the nature and properties of business system changes and continuities in Asia since the 1990s. Second, it develops novel theoretical propositions concerning the primary causes of these changes and continuities, representing a collective effort to theorise the changing varieties of Asian economic organisation. Finally, it explores the causal pathways through which the changing institutional structures governing business systems have shaped and reshaped innovation strategies and trajectories across the national, sectoral and firm levels of analysis.

This book is a comprehensive introduction to financial modeling that teaches advanced undergraduate and graduate students in finance and economics how to use R to analyze financial data and implement financial models. This text will show students how to obtain publicly available data, manipulate such data, implement the models, and generate typical output expected for a particular analysis. This text aims to overcome several common obstacles in teaching financial modeling. First, most texts do not provide students with enough information to allow them to implement models from start to finish. In this book, we walk through each step in relatively more detail and show intermediate R output to help students make sure they are implementing the analyses correctly. Second, most books deal with sanitized or clean data that have been organized to suit a particular analysis.

Consequently, many students do not know how to deal with real-world data or know how to apply simple data manipulation techniques to get the real-world data into a usable form. This book will expose students to the notion of data checking and make them aware of problems that exist when using real-world data. Third, most classes or texts use expensive commercial software or toolboxes. In this text, we use R to analyze financial data and implement models. R and the accompanying packages used in the text are freely available; therefore, any code or models we implement do not require any additional expenditure on the part of the student. Demonstrating rigorous techniques applied to real-world data, this text covers a wide spectrum of timely and practical issues in financial modeling, including return and risk measurement, portfolio management, options pricing, and fixed income analysis.

This book aims at making a contribution to the promotion of small businesses in developing countries. It does so by helping to identify management problems encountered by small businesses in developing countries, with reference to policy environment, institutional framework, and UNIDO technical assistance. The result is aimed at providing a good information base on how small business management and performance in developing countries can be improved. This is for individuals who are already involved with small businesses and those interested in it.
