The previous volume, *The Pathogenesis of Alcoholism: Psychosocial Factors*, attempted to describe the interaction of biological, psychological, and social factors that lead to the initiation and perpetuation of alcoholism. The preface to that volume presented our particular view of the bio-psycho-social interaction as a progressive process in which earlier developments produce new pathogenetic mechanisms, which in turn lead to still other cyclical feedback activities. Although influences from each of the three phenomenologic levels are at work during each stage of the clinical course, it would appear that social factors are most significant in the early phase, psychological factors at the intermediate level, and biological ones toward the end. These differences are only relative, however, for influences of all three types surely are operative during all stages of the syndrome. This appears to be particularly true for the biological parameters of

activity. Don Goodwin (1976), who has supplied much of the data that support the role of hereditary factors in alcoholism, is wont to say that all living behavior is biological-by definition. The operational evidence for this is perhaps more evident in alcoholism than in other syndromes. For example, the general social indifference of many Asians to alcohol may reflect the presence of an atypical isoenzyme of alcohol dehydrogenase rather than some independently derived cultural norm.

The inflorescence of the monoecious maize plant is unique among the Gramineae in the sharp separation of the male and female structures. The male tassel at the terminus of the plant most often sheds pollen before the visual appearance of the receptive silks of th the female ear at a

lateral bud, normally at the 10 leaf [1]. Earlier studies examined the ontogeny of the growing tissues beginning with the embryo in the kernel through to the obvious protuberances of the growing point as the kernel germinates. The differentiated developing soon-to-become tassel and the lateral bulges that develop into the ears on the lateral buds become apparent very early in the germinating kernel [2, 3, 46]. A certain number of cells are destined for tassel and ear development [8]. As the plant develops, there is a phase transition [3, 16] from the vegetative lateral buds to the reproductive lateral buds. This change in phase has been ascribed to genotypic control as evidenced in the differences among different genotypes in the initiation of the reproductive [1]. The genetic control of tassel and ear initiation has been gleaned from anatomical observations. Lejeune and Bernier [12] found that maize plants terminate the initiation of additional axillary meristems at the time of tassel initiation. This would indicate that the top-most ear shoot is initiated on the same day as the initiation of tassel development and this event signals the end of the undifferentiated growing point.

Desert Biology: Special Topics on the Physical and Biological Aspects on Arid Regions, Volume I covers the biology, geophysical characteristics, and ways of life in arid regions. This book is composed of 11 chapters, and begins with a brief description of a desert community, the Merkhayat Jebels, with its diverse fauna and flora. The subsequent chapters look into the climate, geographical distribution, geologic and geomorphic aspects, and the evolution of desert community. These topics are followed by intensive discussions on desert plants, animals, and limnology. The last chapter describes the adaptive processes and human adaptation capacity to arid environments. This book will prove useful to upper division and graduate students in desert biology.

The Sixth International Workshop on the Enzymology and Molecular Biology of Carbonyl Metabolism was held outside of Dublin, Ireland at the end of June, 1992. Prof. Keith Tipton, Chairman of the Biochemistry Department at Trinity College, kindly agreed to host the meeting. On behalf of all of us who attended I wish to extend our sincere thanks to the whole Tipton family for making us feel so welcome in Ireland. It has been a decade since the first workshop was held in Bern, Switzerland. The scope of the meetings reflected somewhat the changes that have occurred in biochemistry during the past decade. At the first meeting primarily enzymes and their properties were discussed. At this last meeting many of the talks centered on gene regulation as well as more traditional aspects of enzymology and metabolism. During the past decade site directed mutagenesis to probe for the active site of an enzyme has become part of traditional enzymology; this was virtually unheard of at our first meeting. Many of the presenters now used this tool to study some aspect of structure and function of one of the three carbonyl metabolizing enzymes.

This volume presents the proceedings of the 1st World Congress on Electroporation and Pulsed Electric Fields in Biology, Medicine and Food & Environmental Technologies (WC2015). The congress took place in Portorož, Slovenia, during the week of September 6th to 10th, 2015. The scientific part of the Congress covered different aspects of electroporation and related technologies and included the following main topics: · Application of pulsed electric fields technology in food: challenges and opportunities · Electrical impedance measurement for assessment of electroporation yield · Electrochemistry and electroporation · Electroporation meets electrostimulation · Electrotechnologies for food and biomass treatment · Food and biotechnology applications · In vitro electroporation - basic mechanisms · Interfacial behaviour of lipid-assemblies, membranes and cells in electric fields · Irreversible electroporation in clinical use · Medical applications: electrochemotherapy · Medical applications: gene therapy · Non-electric field-based physical methods inducing cell poration and enhanced molecule transfer · Non-thermal plasmas for food safety, environmental applications and medical treatments · PEF for the food industry: fundamentals and applications · PEF process integration - complex process chains and process combinations in the food industry · Predictable animal models · Pulsed electric fields and electroporation technologies in bioeconomy · Veterinary medical applications

Get ready to ace your AP Biology Exam with this easy-to-follow, multi-platform study guide 5 Steps to a 5: AP Biology 2018 Elite Student Edition introduces an effective 5-step study plan to help you build the skills, knowledge, and test-taking confidence you need to achieve a high score on the exam. This popular test prep guide matches the latest course syllabus and latest exam. You'll get online help, five full-length practice tests (two in the book and three online), detailed answers to each question, study tips, and important information on how the exam is scored. Because this guide is accessible in print and digital formats, you can study online, via your mobile device, straight from the book, or any combination of the three. With the new "5 Minutes to a 5" section, you'll also get an extra AP curriculum activity for each school day to help reinforce the most important AP concepts. With only 5 minutes a day you can dramatically increase your score on exam day! 5 Steps to a 5: AP Biology 2018 Elite Student Edition features: • New: "5 Minutes to a 5"— Concise activities reinforcing the most important AP concepts and presented in a day-to-day study format • Access to the entire Cross Platform Prep Course in Biology • 5 Practice Exams (2 in the book + 3 online) • Powerful analytics you can use to assess your test readiness • Flashcards,

games, social media support, and more

"This book is about hope in the face of forces that would degrade our world. This book is about the rich tapestry of life that shares our world now and about how we can maintain it, sometimes in places that we protect and set aside, more often in places where we share the lands and waters with a wide range of other species." For more than 30 years, Fundamentals of Conservation Biology has been a valued mainstay of the literature, serving both to introduce new students to this ever-changing topic, and to provide an essential resource for academics and researchers working in the discipline. In the decade since the publication of the third edition, concerns about humanity's efforts to conserve the natural world have only grown deeper, as new threats to biodiversity continue to emerge. This fourth edition has taken into account a vast new literature, and boasts nearly a thousand new references as a result. By embracing new theory and practice and documenting many examples of both conservation successes and the hard lessons of real-world "wicked" environmental problems, Fundamentals of Conservation Biology remains a vital resource for biologists, conservationists, ecologists, environmentalists, and others.

PEOPLE HAVE BECOME SO BUSY WITH EVERYDAY ACTIVITIES THAT THEY SELDOM HAVE TIME TO THINK ABOUT EVERYTHING THAT SURROUNDS THEM. THE WORLD IS FULL OF LIFE, EVEN IN THE SEEMINGLY MOST INSIGNIFICANT THINGS. WOULDN'T IT BE WONDERFUL TO JUST SIT BACK AND TRY TO LEARN MORE ABOUT THE LIVING AND BREATHING SPECIES THAT SURROUND US BUT GO UNNOTICED EVERYDAY? Biology is the science of life, but while many of us may be familiar with the subject, only a few may be aware that biology encompasses much more than just humans and the other species that inhabit the earth. It is, perhaps, the most expansive and interesting subject that you could learn about. You may ask, if it is so expansive, then how would it be possible to learn all the important things there are to know about biology? The answer lies in this book, which would teach you all the most significant concepts to make you realize how biology has implications in our past, our present, and yes, even our future. This book is the only one you need to delve into the world of biology. It will teach you, in simple and easy-to-understand terms, how biology comes alive in our daily activities. Here's what this book contains: What exactly does the study of biology include How can biology help us understand our past Which branches of biology is relevant to our present What implications biology has on our future PLUS: Delve into the world of genetics Understand the how and why of human evolution Know the men and women who have spearheaded breakthroughs in biology You won't get information this comprehensive anywhere else! So act right now! GET YOUR COPY TODAY!

This book will serve as an ideal guide to the relatively new and complex field of bioelectromagnetics for students and researchers interested in the interaction of biological systems and electromagnetic fields. Coverage details:(1) biological responses of human and animals, both in vivo and in vitro methodologies, to magnetic and/or electromagnetic field exposure, (2) characteristics of effective fields, (3) hypotheses to explain possible mechanisms of interaction between the fields and cells, and (4) induced current in ELF and induced heat in RF fields as key interaction mechanisms.

As in most groups of insects, scientific research on the Chrysomelidae began in Europe in 1758, with the description of a few genera and species by the Scandinavian entomologists C. von Linne, I.C. Fabricius, and others. As the 19th century dawned, many systematic entomologists took up the study of chrysomelid beetles, together with other groups of beetles, and many new species and genera were described from all parts of the world. This trend has, of course, continued down to the present time. However, researches on the Chrysomelidae did not remain restricted to systematics, and many new lines of study have been followed, especially in the present century, by workers who have benefitted from the advances made in related fields of pure and applied entomology. Much has been achieved in the study of the Chrysomelidae, as elsewhere, and it is the aim of the present book to provide a summary and guide to these achievements. It is also to be expected that this book will provide a stimulus for further studies on the Chrysomelidae, so that we can

anticipate continuing progress in our knowledge and understanding of this group through the endeavours of an ever-increasing number of scientists. I offer my congratulations to all concerned in the preparation of this book and my best wishes for its success.

With the aim of providing an international forum for the communication of both the basic and clinical aspects of molecular and cellular biology of cancer, a NATO ASI was held in Porto Carras, Halkidiki, Greece, September 1-12, 1995. The principles as well as recent developments in tumor biology were discussed in depth, with emphasis on the regulation of the cell cycle, differentiation, programmed cell death (apoptosis) and genetics of cancer. This book constitutes the proceedings of that meeting. Specifically, the following areas were addressed: (a) enzymes and proteins (cyclins) that control the cell cycle, as well as the role of m as gene in meiosis and transformation; (b) the structural basis for specificity in protein-tyrosine kinase reactions; (c) the differentiation of normal as well as neoplastic cells with respect to molecular mechanism(s) by which chemical agents or growth factors trigger maturation; (d) phenotypic and genetic aspects of apoptosis; (e) the role of growth factors, like IGF-I, FGF, TN, IL-6, etc. , in cell cycle regulation, apoptosis (cell death) and senescence; (f) molecular mechanisms of transcriptional activation of globin genes and stability of mRNAs related to growth proteins and iron metabolism; (g) the cellular and molecular biology of bone marrow hemopoiesis; and (h) neurotrophic factors and the generation of cellular diversity in the central nervous system. It was obvious from the studies presented that neoplastic cell growth, differentiation and apoptosis in many cell types are regulated at several levels.

Essential Cell Biology provides a readily accessible introduction to the central concepts of cell biology, and its lively, clear writing and exceptional illustrations make it the ideal textbook for a first course in both cell and molecular biology. The text and figures are easy-to-follow, accurate, clear, and engaging for the introductory student. Molecular detail has been kept to a minimum in order to provide the reader with a cohesive conceptual framework for the basic science that underlies our current understanding of all of biology, including the biomedical sciences. The Fourth Edition has been thoroughly revised, and covers the latest developments in this fast-moving field, yet retains the academic level and length of the previous edition. The book is accompanied by a

rich package of online student and instructor resources, including over 130 narrated movies, an expanded and updated Question Bank. Essential Cell Biology, Fourth Edition is additionally supported by the Garland Science Learning System. This homework platform is designed to evaluate and improve student performance and allows instructors to select assignments on

specific topics and review the performance of the entire class, as well as individual students, via the instructor dashboard. Students receive immediate feedback on their mastery of the topics, and will be better prepared for lectures and classroom discussions. The user-friendly system provides a convenient way to engage students while assessing progress. Performance data can be used to tailor classroom discussion, activities, and lectures to address students' needs precisely and

efficiently. For more information and sample material, visit <http://garlandscience.rocketmix.com/>.
