### **SAP HANA Advanced Modeling** Independently Published

This book introduces developers and architects to the methods and options for implementing smart SAP HANA solutions based on real-world projects, and field tests. It contains clear recommendations for setting up data models, optimizing performance, using the SAP HANA modeler and development perspectives, and for solving complex requirements efficiently. Using a case study to walk through SAP HANA design elements and options, the authors share practical examples, tips, and screenshots for explaining and demonstrating the intricacies of SAP HANA. This book provides SAP HANA design patterns with the best balance between performance, memory consumption, and maintainability. Learn how to leverage advanced modeling techniques for implementing a sustainable architecture and for solving further business problems. • Data modeling guidelines and common test approaches • Information view performance optimization • Modular solutions to complex requirements • Best practices and recommendations

### SAP Hana Modeling Practical World Espresso Tutorials GmbH

This book provides various insights on the overall HANA modeling process, which essentially involves the activities such as requirement analysis for the KPIs, solution design, creating information models (views), implementing SQL Script based solutions, performance optimization of the models, testing and validations. It will help the learners, in understanding the practical application of various SAP HANA modeling concepts to achieve complex reporting requirements. The contents of this book includes various building blocks of HANA modeling solutions: Key features and use cases of SAP HANA platform to address various requirements related to analytics Project planning approaches such as requirement analysis, implementation methodology and solution design aspects related to native HANA Implementing Calculation views for different reporting requirements - Modeling Concepts and practical examples SQL Script programming concepts and applications Data validation and debugging techniques related to HANA models Best practices for modeling HANA views, managing the changes and transports Performance analysis tools and optimization methods for HANA models Case studies and solution approaches using graphical modeling and SQL script
